Drew Bohan, Executive Director
California Energy Commission
715 P Street Sacramento, CA 95814

RE: San Diego Community Power Load Management Standards Compliance Plan

Dear Mr. Bohan,

In accordance with California Code of Regulations, Title 20, Section 1623.1(a)(3)(C) (20 CCR § 1623.1(a)(3)(C)), San Diego Community Power respectfully submits this Annual Load Management Standards Implementation Report to the California Energy Commission ("CEC") Executive Director and to the CEC Docket Number 23-LMS-01.

If you have any questions, or additional information is required, please contact me at dkinports@sdcommunitypower.oerg or Aaron Lu at alu@sdcommunitypower.org.

Sincerely,

Dean Kinports
Senior Strategic Policy Manager
San Diego Community Power

1. Introduction

1.1 About SDCP

San Diego Community Power ("SDCP") is a Joint Powers Authority ("JPA") formed by the communities of Chula Vista, Encinitas, Imperial Beach, La Mesa, and San Diego in October 2019. In November 2021, SDCP's founding member agencies were joined by National City and the unincorporated areas of San Diego County. In September 2026, SDCP's Board of Directors approved the addition of the City of Coronado as a member of SDCP. As a JPA, SDCP is a local government agency and is governed by an eight-member Board of Directors composed of elected representatives of its member local agencies. Through these representatives, SDCP is controlled by and accountable to the communities SDCP serves. SDCP provides retail electric generation services and complementary energy programs to customers within the municipal boundaries of its member local governments. SDCP is currently serving approximately 974,000 service accounts, equal to approximately 661 gigawatt hours ("GWh") of energy consumption per month.

SDCP was formed to empower its member communities to choose the generation resources that reflect their individual values and needs. SDCP was established to procure and develop electrical energy for customers in participating jurisdictions, address climate change by reducing energy-related greenhouse gas emissions, promote electrical rate price stability and affordability, and foster local economic benefits such as job creation, local energy programs, and local power development while prioritizing equity.

1.2 Overview of Annual Report

Set forth in the California Code of Regulations, Title 20, Section 1623.1(a)(3)(C), each large Community Choice Aggregator ("CCA") is required to submit to the California Energy Commission ("CEC") an annual report demonstrating implementation of its approved compliance plan.

On February 22, 2024, SDCP's Board of Directors ("Board") approved SDCP's Load Management Standards Compliance Plan ("LMS Compliance Plan"). Following its approval by Board, SDCP's LMS Compliance Plan was filed with the CEC to the 23-LMS-01 Docket on March 7, 2024. SDCP's Board adopted a revised LMS Compliance Plan on August 28, 2025. On August 29, 2025, SDCP filed the revised LMS Compliance Plan, which was subsequently approved at a CEC Business Meeting on December 8, 2025.

Pursuant to 20 CRR § 1623.1(a)(3)(C), this annual report describes SDCP's implementation progress since approval of its LMS Compliance Plan, including:

- Submission of time-dependent rates to the Market Informed Demand Automation Server ("MIDAS"),
- Availability of Rate Identification Numbers ("RIN") on customer billing statements,
- Participation in the development of a Single Statewide Tool,
- Hourly marginal cost-based rate, and
- LMS-Compliant Load Flexibility Programs.

The table below provides an overview of SDCP's progress in advancing the requirements of the LMS.

LMS Section	Regulatory Requirement	Due Date	Status
§1623.1(c)	Within three months of regulation effective date, 4/1/2023, upload existing time-dependent rates to the MIDAS database.	8/1/2023[1]	Completed
§1623.1(a)(1)	Within one year of regulation effective date, develop and submit a compliance plan addressing how SDCP plans to comply with LMS requirements, and including evaluation of marginal cost-based rates and programs, to SDCP's Board. The plan must be considered for adoption within 60 days after submission.	4/1/2024	Completed
§1623.1(a)(3)(A)	Submit compliance plan to the Executive Director on the CEC within 30 days of adoption of the plan. Respond to requests for additional information and/or recommendations within 90 days.	6/1/2024	Completed
§1623(c)(4)	Within one year of regulation effective date, provide customers access to their RIN on billing statements and in online accounts using both text and Quick Response ("QR").	4/1/2024	Completed
§1623(c)(2)	Within 18 months of regulation effective date, develop and submit to the CEC, in conjunction with the other obligated utilities, a single statewide standard tool for authorized rate data access by third parties, and the terms and conditions for using the tool. Upon CEC approval, maintain and implement the tool.	5/8/2029[2]	In progress
§1623.1(b)(3)	Within 18 months of regulation effective date, submit to the CEC Executive Director a list of load flexibility programs deemed cost effective by SDCP. The portfolio of programs must provide at least one option to automate response to MIDAS signals for each customer class where SDCP's Board has determined such a program would materially reduce peak demand.	10/1/2024	Completed
§1623.1(a)(3)(C)	Submit annual reports to the CEC Executive Director demonstrating implementation of plan, as approved by SDCP's Board.	Annually	In progress

[1] California Energy Commission, Order No. 23-0531, June 1, 2023, https://efiling.energy.ca.gov/GetDocument.aspx?tn=250450&DocumentContentId=85205.
[2] Delayed to May 8, 2029 at March 12, 2026 CEC Business Meeting available at https://efiling.energy.ca.gov/GetDocument.aspx?tn=269300&DocumentContentId=106380.

§1623.1(b)(2)	Within 27 months of the regulation effective date, submit at least one marginal cost-based rate to SDCP's Board for approval for any customer class(es) where such a rate will materially reduce peak load.	7/1/2025	Deferred
§1623.1(b)(4)	Within 51 months of the regulation effective date, offer customers voluntary participation in either a marginal cost-based rate, if approved by SDCP's Board, or a cost-effective load flexibility program.	7/1/2027	In progress
§1623.1(b)(5)	Conduct a public information program to inform and educate affected customers why marginal cost-based rates or load flexibility programs and automation are needed, how they will be used, and how these rates and programs can save customers money.	Ongoing, dependent on offerings	In progress
§1623.1(a)(1)(C)	Review the plan at least once every 3 years after the plan is adopted and submit a plan update to the Board if there is a material change.	Every 3 years	Upcoming, next review expected in December 2028

2. Time-Dependent Rate Submission to MIDAS

Adopted LMS amendments section 1623.1(c) requires each Large CCA to upload existing time-dependent rates to the MIDAS database within three months of the regulation effective date, or by July 1, 2023. On June 1, 2023, the CEC issued Order No. 23-0531-10[3] in response to a request for extension from the IOUs and Large CCAs. The Order approved an extension for CCAs to upload time-dependent generation rates by August 1, 2023, and remaining time-depending rates with rate modifiers by October 1, 2023. Each uploaded rate must be assigned a RIN, which is used to uniquely identify each rate. The MIDAS database will provide information about the rate and any associated marginal signals to which the customer may automate response for each associated RIN.

SDCP continues to work with our back-office provider, Calpine, to facilitate the timely and accurate submission of time-dependent generation rates to the MIDAS database. Following the approval of rates by the Board, SDCP provides Calpine with final rate sheets, typically no less than two weeks in advance of their effective date. Upon receipt, Calpine initiates the process to upload rates to MIDAS.

SDCP currently maintains generation rates and associated RINs in MIDAS. Between 2023 and 2026, SDCP completed a total of six uploads to MIDAS. SDCP's most recent upload was completed in April 2026. A comprehensive list of SDCP's currently available rates and corresponding RINs is provided in Attachment A.

[3] California Energy Commission, Order No. 23-0531, June 1, 2023, https://efiling.energy.ca.gov/GetDocument.aspx?tn=250450&DocumentContentId=85205.

3. RINs on Customer Bills

SDCP customers receive their consolidated billing statements from San Diego Gas and Electric Company ("SDG&E"). SDCP works with our back-office provider, Calpine, to provide SDCP's unbundled RINs for SDG&E to include in customer billing materials. A sample bill displaying SDCP's unbundled RIN via text and QR code is provided in Attachment B.

4. Participation in the Development of a Single Statewide Tool

Adopted LMS amendments section 1623(c)(1)-(2) requires the applicable investor-owned utilities, publicly owned utilities, and CCAs to collaborate to develop and submit a single statewide standard tool for authorized rate data access by third parties, along with a set of terms and conditions of use for CEC approval by October 1, 2024.

Pursuant to the LMS requirements, the joint LSEs submitted a design proposal for the single statewide RIN tool[4] and terms and conditions[5] for the tool to the CEC on October 1, 2024. Since the submission of the joint LSE proposal, the CEC extended the §1623(c)(1)-(2) deadline to May 8, 2029.[6] Most recently, the Commission approved a new rulemaking to consider amendments to the LMS, including amending or replacing the single statewide tool.[7]

SDCP welcomes the opportunities presented by this new rulemaking and looks forward to the further development of a framework for a cost-effective, standardized tool to enable and support load flexibility for all customers.

5. Hourly Marginal Cost-Based Rate

Adopted LMS amendments section 1623.1(b)(2) directs each Large CCA to apply for approval of at least one dynamic rate for the customer class(es) from its Board by July 1, 2025, for which the Board determines such rate will materially reduce peak load. Section 1623.1(b)(4) requires CCAs to offer customers voluntary participation in such a rate or a specified load flexibility program by July 1, 2027.

As discussed in the revised LMS Compliance Plan, based on its evaluation of dynamic rates, SDCP cannot currently conclude that developing and implementing such rates on the LMS timeframe for any customer class would result in material reductions in peak load or be cost effective, due to (1) delayed SDG&E service area dynamic rate pilots, and corresponding data, to evaluate peak load reduction and cost-effectiveness, (2) a significant market risk to customers on dynamic rates, even with enabling load-shifting technology, and (3) customers understand time-dependent rates and programs better than a dynamic, market-based rate that fluctuates hourly.

---

[5] Single Statewide Tool Joint LMS LSEs Terms and Conditions for 3rd Party Access (2024), available at https://efiling.energy.ca.gov/GetDocument.aspx?tn=259402&DocumentContentId=95487.
[6] Delayed to May 8, 2029 at March 12, 2026 CEC Business Meeting available at https://efiling.energy.ca.gov/GetDocument.aspx?tn=269300&DocumentContentId=106380.
[7] Orders and Resolutions of the April 8, 2026 Business Meeting, available at https://efiling.energy.ca.gov/GetDocument.aspx?tn=269446&DocumentContentId=106537.

SDCP is participating and actively engaged in SDG&E's 2026 Demand Flexibility Rate Application (Application 26-02-001), where SDG&E is proposing dynamic rates for all customer classes for adoption before the California Public Utilities Commission. In its Application Introduction, SDG&E states that it "does not believe this proposal represents the most cost-effective or prudent use of Commission or SDG&E resources given the current affordability challenges facing electric ratepayers in our service area and across the State"[8]. SDG&E proposes for the Commission to adopt final decision on its application in January 2027, and rates will be available to customers for enrollment 10 months after the final decision is adopted. SDCP will continue to engage in this proceeding and views this as a valuable opportunity to gain experience with potential dynamic rate design and implementation.

6. LMS-Compliant Load Flexibility Programs

The adopted LMS amendments recognize that load flexibility programs may provide an alternative pathway to achieve the objectives of encouraging off-peak energy usage, controlling peak load to improve reliability and system efficiency, lessening, or delaying the need for new capacity, and reducing fossil-fuel consumption. Adopted LMS amendments section 1623.1(a)(1)(B) requires each Large CCA to propose and evaluate programs that enable automated responses to marginal cost-based signals for each customer class, if the Large CCA does not propose the development of marginal cost-based rates. The programs must be evaluated based on cost effectiveness, equity, technological feasibility, and benefits to the grid and customers. Thus, in lieu of developing and proposing adoption of new dynamic rates, SDCP has and will continue to implement and offer load flexibility programs to support the intent and goals of the LMS and in meeting LMS compliance.

The following section provides a list of existing and planned program offerings that test reliability, load reduction, and customer adoption. These programs support the intent and spirit of LMS goals and are also LMS compliant, with justifications of modifications to LMS requirements provided within each program summary below.

6.1 Bring Your Own Device Load Shifting Pilot

Pilot Name: Smart Energy Rewards (formerly Smart Home Flex)

Date of first availability: The program first became available on a pilot basis in Quarter 1 2025, with enrollment limited to 2,000 thermostats and 150 heat pump water heaters. Following an evaluation period, the pilot was not transitioned to a full-scale program in July 2026 because the original pilot design did not produce conclusive evaluation results. The program was subsequently redesigned to improve evaluability, including the development and implementation of a dispatch matrix, and enrollment reopened in mid-July 2026 with a target of enrolling 5,000 smart thermostats. Enrollment of heat pump water heaters has been slow because participation is currently limited to customers who installed eligible water heaters through the Technology and Equipment for Clean Heating ("TECH") Clean California program.

[8] Application of SDG&E for Approval of Demand Flexibility Rates in Compliance with D.25-08-049, page 1, available at https://www.sdge.com/sites/default/files/regulatory/2026-02/A2602XXX_SDGE%202026%20Demand%20Flex%20Rate%20Application.pdf.

This requirement ensures the presence of thermostatic mixing valves, which are necessary to maintain participant safety while maximizing load-shifting capability.

Customer class and device eligibility: The pilot is open to residential customers with a qualified device. Qualified devices are currently limited to smart thermostats and water heaters and may expand to include pool pumps and battery storage in the next one- to two years after the pilot is launched.

Device dispatch: The pilot dispatch strategy is designed to deliver daily load shifting value. The specific device-level dispatch varies by asset class, based on the technical and operational limitations of the equipment and/or Original Equipment Manufacturer ("OEM"). For example, smart thermostats are dispatched during the summer cooling season generally for four hours at a time, with one hour of precooling followed by three hours of shed and called approximately 20 times per season. Thermostats are operated to maximize load shifting value, and while daily dispatch is not allowed by device OEMs, the strategy seeks to maximize alignment with price and load. Smart water heaters are called on twice daily throughout the year, with 1 hour of preheating followed by two hours of shed.

Dispatch signal: Resources are dispatched based on a multi-tier optimization framework. First, the pilot limits load-up commands to off peak periods and schedules load reductions to occur on peak, to maximize bill savings for participants. Within this constraint, the pilot dispatches devices in a manner that maximizes peak load reduction, using SDCP's Distributed Energy Resources Management System ("DERMS"). The DERMS allows for coordinated control and management of participating Distributed Energy Resources ("DERs") and will, once available, use the MIDAS to incorporate day ahead pricing data into the dispatch and operationalization of the daily load shifting strategy. Finally, the pilot will override its daily load management strategy in the event of a grid emergency, to support statewide peak load reduction efforts.

Pilot Incentives: Customers may receive one or more of three categories of incentives for participating in the pilot, an upfront (or enrollment incentive), a participation (or seasonal) incentive and/or a performance incentive. The upfront incentive is a flat, one-time, per device payment (currently set at $50) for enrolling in the pilot program. The participation incentive is paid out seasonally for devices that remain in the pilot through a load shifting seasonal window (summer or winter). The performance incentive is a payment to customers that varies based on a device's responsiveness to daily load shifting commands. The specific incentives a pilot participant receives vary based on the device(s) enrolled. All enrolled DERs receive an enrollment incentive; however, some OEMs and/or DER asset classes are less conducive to, and in some cases prohibited from participating in, performance-based incentives.[9] In the case of smart thermostats, OEMs often keep participant data confidential, even towards load serving entities. In such a scenario, it is not possible for the load serving entity to design performance-based incentives. For heat pump water heaters, the devices are already so energy efficient that there may not be enough capacity reduction to be achieved through their operational changes. SDCP prefers the use of performance-based incentives over fixed participation incentives

[9] One of the major smart thermostat OEMs explicitly prohibits participation of its devices in programs or pilots that include performance-based incentives. Given this prohibition, the thermostat portion of SDCP's Smart Home Flex Pilot does not offer performance-based incentives.

whenever possible and will regularly revisit incentive design to ensure that performance-based incentives are being used.

https://sdcommunitypower.org/programs/smart-home-flex/.

6.2 Solar Batteries Savings ("SBS") Program

Pilot Name: Solar Batteries Savings

Date of first availability: The program first became available on a pilot basis in Quarter 3 2024. Pilot enrollment was limited by the budget and 2,000 residential energy storage batteries were still installed to over 1,450 customers. SDCP relaunched SBS as a full program in Quarter 3 2025, which will remain active for existing participants and available for new participants past July 1, 2027.

Customer class and device eligibility: The pilot is open to residential customers with a qualified device. Qualified devices in the pilot phase included products from twelve residential energy storage manufacturers. Since program relaunch, eligibility has been limited to battery OEMs that have an active integration with SDCP's DERMS platform, Virtual Peaker, and currently includes five battery storage manufacturers. SDCP is assessing a potential program expansion to include small and medium commercial customers (<200 kW monthly demand).

Device dispatch: The pilot dispatch strategy was designed to deliver daily load shifting value. Under the pilot program design, participating batteries are charged from onsite solar Photo-Voltaic ("PV") and discharged daily (weekdays only or weekdays and weekends, based on customer preference), during a dispatch window that aligns with the on-peak period and can change monthly based on SDCP's demand profile. Participants can select the percentage of their battery's useable capacity to enroll in the program, with a minimum requirement of 50%. The dispatch strategy for the relaunched program is similar but only requires the battery to dispatch on weekdays and requires 50% of the battery to be discharged. In 2025, the dispatch was two hours and in 2026 it was four hours.

Dispatch signal: Resources are dispatched based on a multi-tier optimization framework. First, participating batteries are required to charge exclusively from on-site solar, the least carbon intensive resource available. Next, the pilot schedules battery to discharge a continuous kW depending on the battery's total usable capacity and the dispatch duration during the on-peak period, to support participant bill savings. Within this constraint, the pilot then dispatches devices in a manner that supports peak load reduction, using SDCP's DERMS. The DERMS allows for coordinated control and management of participating DERs and will, once available, use MIDAS to incorporate day ahead pricing data into the dispatch and operationalization of the daily load shifting strategy.

Incentives: Customers receive two categories of incentives for participating in the pilot, an upfront and a performance incentive. The upfront incentive is a one-time, volumetric incentive based on the nameplate usable capacity of the battery being installed. The performance incentive is payment to customers that varies based on the amount of actual device discharge

over the dispatch window during on-peak periods. In addition, the SBS pilot has two incentive tiers: Market Rate and Non-Market Rate; with higher Non-Market Rate incentives available for California Alternate Rates for Energy ("CARE") and Family Electric Rate Assistance Program ("FERA") customers and those located in one of SDCP's Communities of Concern.

The performance-based incentive is based on the spirit of hourly marginal cost, in which charging and discharging profiles have a fixed value. Currently, there is no added benefit to providing incentives at a granular hourly level to achieve load impact results.

Available supporting weblinks and reference materials:
https://sdcommunitypower.org/programs/solar-battery-savings-program-2/.

6.3 Managed Charging (V1G) Program

Pilot Name: EV Flex Connect

Date of first availability: The program first became available on a pilot basis in Quarter 1 2025. Pilot enrollment is limited to 1,000 electric vehicles ("EVs"). Following evaluation of pilot performance, SDCP anticipates relaunching the pilot as a program which will remain active and available past July 1, 2027, for both active and new participants.

Customer class and device eligibility: The pilot is open to residential customers that regularly charge their qualified vehicle at home. Qualified vehicles are currently limited to telematics-enabled EVs that can be remotely controlled and monitored via a software interface through Optiwatt, SDCP's managed charging platform provider. Community Power completed an assessment of a commercial V1G offering and made the determination not to move forward at this time.

Device dispatch: The pilot dispatch strategy is designed to deliver daily load shifting value. Participating vehicles are scheduled to charge during super off-peak periods, with charging timeframes and durations optimized to ensure each vehicle reaches its desired state of charge by the scheduled departure time. The pilot is structured to reduce peak load by spreading EV charging load across the hours of the day.

Dispatch signal: Resources are dispatched based on a multi-tier optimization framework. Optimization is managed through SDCP's V1G platform and centers on time-of-use rate structures. This optimization aims to spread overnight charging load evenly across the off-peak period to reduce secondary peaks and impacts on slice-of-day resource adequacy. First, the pilot schedules vehicle charging to occur in the lowest-cost time-of-use period to maximize bill savings for participants. Within this constraint, the pilot then optimizes charging schedules in a manner that maximizes peak smoothing. The V1G platform allows for coordinated control and management of participating vehicles and will, once available, use MIDAS to incorporate day ahead pricing data into the dispatch and operationalization of the daily load shifting strategy. Finally, the pilot will override its daily load management strategy in the event of a grid emergency, to support statewide peak load reduction efforts. In addition, SDCP is collaborating with SDG&E to understand how distribution operational needs can be incorporated into the optimization framework, seeking opportunities to balance bulk system and distribution value.

Pilot Incentives: Customers may receive two categories of incentives for participating in the pilot: an upfront (or enrollment) incentive and a participation incentive for staying enrolled in the pilot. The upfront incentive is a flat, one-time, per vehicle payment for enrolling in the pilot. The participation incentive is issued monthly for vehicles that remain in the pilot. SDCP is considering a more performance-based incentive following the evaluation of pilot results, once the slice-of-day capacity value is better understood.
