Subject: Pre-Rulemaking Docket Number 12-AAER-01 "Appliance Efficiency Enforcement Rulemaking"

Dear Chairman Weisenmiller and Commissioners:

It is in the interest of all Californians to ensure the state's adoption of the strongest possible appliance efficiency standards and regulations, and to devise measures to strictly enforce those standards.

I'm a consumer and ratepayer who, like most of us, lives with home appliances and consumer electronics everywhere in daily life, it makes sense not to waste energy in using them all and to make sure they are as efficient as possible. It makes no sense for anyone to pay the unnecessary costs of inefficient products that use more energy than needed.

Our state has set greenhouse gas reduction goals, and stronger efficiency standards and competent enforcement mechanisms have become absolutely critical to making sure those goals are met. Energy efficiency and conservation are the key elements of all efforts to cut back carbon emissions and mitigate climate disruption.

Please make sure that enforcement measures include internet sales of appliances and consumer electronics. Those measures should also specify accountability of those persons and companies that sell and manufacture consumer electronics and appliances.

I appreciate anything you and your agency can do to keep California energy efficient.

Respectfully,

/s/
