Oppose the Compass Energy Storage Project

While clean energy solutions are critical to our future, this particular project is in the wrong place. It's too close to homes, schools, hospitals, open space, wildlife, creeks that empty into the ocean and vegetation. Local first responders have raised red flags as to the fire danger and the danger to public health of our residents including many children and the elderly. We have seen too many fires from these facilities already with no solution to prevent another from happening right here in our backyard! Our neighborhood was just reclassified as high fire danger. This is not a location where a facility with such a high fire danger and such a limited way to prevent its spread and ill effects should be built. We are at risk from fire, toxic fumes, and environmental contamination. If these facilities must be built, let's build them far from residential areas, far from risk to humans, animals, vegetation, our environment. There is bipartisan opposition from the vast majority of homeowners and business owners. Do not approve this project!
