Support for the San Juan Capistrano Battery Storage Facility

Hi, I'm a chemical engineering student and want to voice my support for Orange County to increase its renewable capabilities to be less dependent upon outdated, dirty, and expensive fossil fuels. As a young adult, climate change deeply worries me, my brother is a victim of the LA fires, I know multiple people with loved ones who died of heat stroke, and these events will only become worse if not mitigated.

A lot of opposition of the project comes from people being fearful of this new technology, not because of the hazards it (doesn't) pose, but because they've never seen a battery storage plant incident, because of how safe there are. There are countless accidents from peaker plants and large externalities such as air pollution and climate change, meanwhile I couldn't find me someone who says that batteries has negatively affected them, because they just sit there and do nothing but charge and discharge.

This is a no brainer for OC, we can receive cheaper and cleaner energy, or we could not. Thank you for your time.
