Objection to compass energy storage project

This is an incredibly dangerous project that should not be considered anywhere near homes. These plants have been know to catch fire and destroy everything in their wake and subject the residents to the horrific damage and toxicity. It is unconscionable that Saddleback Church that was GIFTED this land could be so money hungry that it would end being used this way in this community. At the very least it would bring down the value of homes just by its presence and potential danger.
