## **Lithium battery storage building in San Juan,ca**

There must be a better location to place such a lithium battery plant.

I am against its placement in San Juan, Ca..

These are the gases releases from lithium battery fires:

Hydrogen Flouride

Carbon Monoxide

Carbon Dioxide plus hydrogen chloride and hydrogen Cyanide.

Eventhough there will be fire protection an unplanned fire would be a major detriment to the health of the local people. There is also a major high school within 500 yards of this building.

Disapprove this request and put where humans would not be injured if a fire occurred
