INTENTIONALLY LEFT BLANK

1 Introduction

On April 7, 2025, Levy Alameda LLC and Affiliates (Applicant) received a Second Determination of Incompleteness and Request for Information from the California Energy Commission (CEC) for the Potentia-Viridi Battery Energy Storage Project (Project; Docket Number 24-OPT-04) in response to the Applicant's previous submittals. This document responds to the CEC's request and provides further clarification on the topic of Air Quality, Greenhouse Gas Emissions, and Public Health as it relates to the Project.

2 Air Quality, Greenhouse Gas Emissions, Public Health Response

2.1 Public Health - Data Requests REV 1 DR PH-1 through REV 1 DR PH-4

2.1.1 Data Request REV 1 DR PH-1

REV 1 DR PH-1. *Please provide a copy of the UL 9540A report, if a specific battery technology/manufacture has been chosen, including measured emissions of criteria air pollutants, toxic air contaminants, greenhouse gases (GHG), and hazardous materials. Otherwise, please provide industry average data or a literature review addressing the emissions and exhaust parameters requested in REV 1 DR PH-2 below.*

Response: Please see the attached UL 9540 A report for each potential BESS vendor in Confidential Attachment 1.

2.1.2 Data Request REV 1 DR PH-2

REV 1 DR PH-2. *Please provide the exact locations (latitude and longitude or UTM coordinates) and dimensions of the BESS enclosures for modeling purposes. Please provide the following input parameters for a dispersion modeling analysis of all potential criteria air pollutants, greenhouse gases, and toxic air contaminants (TACs) that could be generated during combustion: emission rates (in grams/second), exhaust temperature, exhaust diameter, pressure, and exhaust gas velocity resulting from battery damage or thermal runaway of the whole project. Please include the calculation worksheet if available.*

Response: Table 3 of the Hazardous Consequences Analysis (see Attachment 2) is provided below which lists the emission source parameters. Please see the attached Hazardous Consequences analysis which includes all of the requested information in Attachment 2.

Table 3. Emission Source Parameters

Source ID	Source Name	Source Type	Source Parameters
STCK1	BESS Container	Point	Base Elevation: 431.79 ft Release Height ^a : 9.14 ft Emission Rate ¹ : 1 g/s Gas Exit Temperature ^b : 1,160 °F Stack Inside Diameter ^a : 1.36 ft Gas Exit Velocity ^b : 0.87 m/s Gas Exit Flow Rate: 248.78 ft ³ /min Variable Emissions Scenario: None

2.1.3 Data Request REV 1 DR PH-3

REV 1 DR PH-3. *Please provide a dispersion modeling analysis of all potential criteria air pollutants and TACs for the thermal runaway scenario using a well- validated model (AERMOD preferred).*

Response: Please see the attached Hazardous Consequences Analysis which includes dispersion modeling for criteria air pollutants and TACs for the thermal runaway scenario using AERMOD in Attachment 2.

2.1.4 Data Request REV 1 DR PH-4

REV 1 DR PH-4. *Please compare the modeled fire-related TACs concentrations to the United States Environmental Protection Agency Acute Exposure Guideline Levels (AEGL) and the Office of Environmental Health Hazard Assessment/California Air Resources Board acute Reference Exposure Levels (RELs) and demonstrate whether the acute hazard Index (HI) of TACs would be higher than the significance threshold of 1 at sensitive receptors. Please demonstrate whether the criteria air pollutant impacts would cause or contribute to any exceedance of ambient air quality standards. If exceedances occur, provide a detailed Emergency Response Plan and outline the applicable regulatory notification requirements.*

Response: Please see the attached Hazardous Consequences analysis which compares the modeled TAC concentrations to the relevant AGELs, RELs, and HI in Attachment 2. Attachment 2 also demonstrates that criteria air pollutant emissions resulting from a thermal runaway event would not exceed any ambient air quality standards.

2.2 Greenhouse Gas Emissions - Data Requests REV 1 DR GHG-1 through REV 1 DR GHG-4

2.2.1 Data Request REV 1 DR GHG-1

REV 1 DR GHG-1. *What is the difference in GHG emissions between the two fuels (renewable diesel and bio-diesel) compared to conventional diesel and whether there are any feasibility issues in using bio-diesel versus renewable diesel?*

Response: The difference between the two fuels GHG emissions depends on the particular variety of each fuel, however they do generally result in similar GHG emission reductions compared to conventional diesel. Biodiesel can require engine modifications depending on the particular variety of biodiesel used which are accounted for in the generator selected for the project, but renewable diesel can be used as a “drop-in” fuel which requires no modifications to a standard diesel fueled engine.

2.2.2 Data Request REV 1 DR GHG-2

REV 1 DR GHG-2. *Please confirm whether any refrigerant would be used for building or BESS cooling. Please provide the specifications if any refrigerant would be used on the project, including GHG emissions calculation due to refrigerant leakage. Please demonstrate that the proposed refrigerant would comply with the HFC prohibition regulation.*

Response: Depending on the particular battery technology selected, different refrigerants would be required for BESS cooling. A discussion of the use of refrigerants and their compliance with the HFC prohibition regulation is discussed below.

Supplier 1 – Supplier 1 would include the use of a refrigerant in the form of R-134a which has a GWP of 1430 but would use less than 50 pounds in a closed loop liquid system. Supplier 1 does not use this refrigerant for air conditioning purposes and therefore is not subject to the limitation set forth at 17 Cal. Code Regs., § 95374. Supplier 1 does not condition air - as all components in the liquid thermal management system use the coolant specifically as a working fluid.

Supplier 2 – Supplier 2 would use approximately seven pounds refrigerant R-513a per unit. The Global warming potential of R513a is 573 which is below the indicated maximum of 750 GWP for chillers with a fluid exit temperature of 35 Fahrenheit.

Supplier 3 – Supplier 3 would include the use of a refrigerant in the form of R-134a which has a GWP of 1430 but would use less than 50 pounds in a closed loop liquid system and therefore would be exempt from per the exceptions listed under Section 95375(c)(2)(B).

The GHG emissions from the vendor with the highest potential total GHG emissions related to refrigerant usage assuming a standard leakage rate, were added to Table 24 of the AQ-GHG Technical Report in Attachment 3.

2.2.3 Data Request REV 1 DR GHG-3

REV 1 DR GHG-3. *Please include the rest of the BMPs for Construction-Related Emissions.*

Response: The air quality BMPs included under PDF-AQ-1 are required per BAAQMD guidance to achieve a less-than-significant impact for air quality impacts related to fugitive PM₁₀ and PM_{2.5} during project construction. The GHG reduction measures listed in Chapter 8 of the BAAQMD 2022 CEQA Guidelines are not required to reduce GHG emissions from the project to a less than significant level as the BAAQMD has not adopted a quantitative threshold for construction related GHG emissions to demonstrate the GHG reduction measures are required.

2.2.4 Data Request REV 1 DR GHG-4

REV 1 DR GHG-4. *Please incorporate applicable measures from the Alameda County CCAP in the project and demonstrate that the project would comply with these applicable measures.*

Response: The County's CCAP strategies and reduction measures are largely focused and oriented around municipal actions to reduce GHG emissions and not on GHG reductions measures for individual development projects. Therefore, they were not included in the initial analysis. However, for clarity and completeness please see the following table (Table 16) which has also been added to the technical report in Attachment 3. On a more general level the Project would support the larger goals of CCAP by facilitating the increased use of intermittent renewable energy from wind and solar by storing the energy for use during peak energy consumption periods or periods of low renewable energy generation.

Table 16. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
Transportation	
T-1 Improve Bicycle near community activity areas.	No conflict. The Project would not obstruct or interfere with County efforts to implement this measure. The proposed project is located in a remote part of the County, not near existing community activity areas.
T-2. Develop appropriate bicycle infrastructure for high traffic intersections and corridors.	No conflict. The Project would not obstruct or interfere with County efforts to implement this measure.
T-3. Increase the number of bicycle racks and storage in underserved civic and commercial areas.	No conflict. The Project would not obstruct or interfere with County efforts to implement this measure.
T-4. Enhance pedestrian infrastructure within easy walking distance from community activity areas.	No conflict. The Project would not obstruct or interfere with County efforts to enhance pedestrian infrastructure within easy walking distance from community activity areas.
T-5. Enhance the traffic calming Program to improve pedestrian safety.	Not Applicable. The Project would not obstruct or interfere with County efforts to enhance the traffic calming Program to improve pedestrian safety.

Table 16. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
T-6. Improve pedestrian connectivity and route choice in neighborhoods.	No conflict. The Project would not obstruct or interfere with County efforts to improve pedestrian connectivity and route choice in neighborhoods.
T-7. Work with School Districts to develop a School Alternative Transportation Plan by improving/expanding walking, school bus use, safe routes to school program and school bus services.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with School Districts to develop a School Alternative Transportation Plan by improving/expanding walking, school bus use, safe routes to school program and school bus services.
T-8. Conduct a public transit study and implement ridership enhancement programs.	Not Applicable. The Project would not obstruct or interfere with County efforts to conduct a public transit study and implement ridership enhancement programs.
T-9. Work with AC transit to increase service frequency on select bus routes.	Not Applicable. The Project would not obstruct or interfere with County efforts to implement this measure.
T-10. Provide transit buses with signal prioritization devices to facilitate time effective public service transit.	Not Applicable. The Project would not obstruct or interfere with County efforts to provide transit buses with signal prioritization devices to facilitate time effective public service transit.
T-11. Work with AC Transit to provide transit essential improvements including shelters, route information, benches and lighting.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with AC Transit to provide transit essential improvements including shelters, route information, benches and lighting.
T-12. Work with public transit agencies to better accommodate bicycles.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with public transit agencies to better accommodate bicycles.
T-13. Enhance rideshare infrastructure and services to increase community participation in this important travel mode.	Not Applicable. The Project would not obstruct or interfere with County efforts to enhance rideshare infrastructure and services to increase community participation in this important travel mode.
T-14. Reduce minimum parking requirements for mixed-use, pedestrian and transit-oriented development.	Not Applicable. The Project would not obstruct or interfere with County efforts to implement this measure. <i>The Project is located in a remote location not near other mixed uses or transit developments.</i>
Land Use	
L-1. Facilitate the establishment of mixed-use, pedestrian, and transit-oriented development near major transit stations or transit corridors.	Not Applicable. The Project would not obstruct or interfere with County efforts to implement the establishment of mixed-use, pedestrian, and transit-oriented development near major transit stations or transit corridors.
L-2. Reduce restrictions on second units in single family residential districts near transit stations, major bus route corridors, neighborhood commercial centers and central business districts.	Not Applicable. The Project would not obstruct or interfere with County efforts to reduce restrictions on second units in single family residential districts near transit stations, major bus route corridors, neighborhood commercial centers and central business districts.

Table 16. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
L-3. Increase the diversity of uses in neighborhood serving commercial centers.	Not Applicable. The Project would not obstruct or interfere with County efforts to increase the diversity of uses in neighborhood serving commercial centers.
L-4. Improve the vitality of mixed-use neighborhood serving commercial centers through increased density allowances and enhanced design.	Not Applicable. The Project would not obstruct or interfere with County efforts to improve the vitality of mixed-use neighborhood serving commercial centers through increased density allowances and enhanced design.
L-5. Conduct land use and market analyses to identify sites within expansive residential areas that could support new or expanded neighborhood commercial centers.	Not Applicable. The Project would not obstruct or interfere with County effort to conduct land use and market analyses to identify sites within expansive residential areas that could support new or expanded neighborhood commercial centers.
Building Energy	
E-1. Work with PG&E and Alameda County Cities to accelerate smart grid integration in the community.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with PG&E and Alameda County Cities to accelerate smart grid integration in the community.
E-2. Evaluate the potential for district energy systems in mixed-use and higher density areas of the community, and develop an implementation plan for cost-effective systems.	Not Applicable. The Project would not obstruct or interfere with County efforts to evaluate the potential for district energy systems in mixed-use and higher density areas of the community, and develop an implementation plan for cost-effective systems.
E-3. Develop a comprehensive outreach program to facilitate voluntary home energy efficiency improvements.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a comprehensive outreach program to facilitate voluntary home energy efficiency improvements.
E-4. Identify and develop low-cost financing products and programs that encourage investments in energy efficiency residential buildings.	Not Applicable. The Project would not obstruct or interfere with County efforts to identify and develop low-cost financing products and programs that encourage investments in energy efficiency residential buildings.
E-5. Expand outreach to low-income homeowners in order to encourage participation in federally funded energy efficiency and weatherization programs.	Not Applicable. The Project would not obstruct or interfere with County efforts to expand outreach to low-income homeowners in order to encourage participation in federally funded energy efficiency and weatherization programs.
E-6. Identify and implement opportunities to improve efficiency of rental units.	Not Applicable. The Project would not obstruct or interfere with County efforts to identify and implement opportunities to improve efficiency of rental units.
E-7. Develop and implement an outreach and financial assistance program that encourages businesses to invest in efficiency improvements.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop and implement an outreach and financial assistance program that encourages businesses to invest in efficiency improvements.
E-8. Renew the County Green Building Ordinance.	Not Applicable. The Project would not obstruct or interfere with County efforts to renew the County Green Building Ordinance.

Table 16. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
E-9. Provide incentives, such as priority permitting for buildings that exceed Title 24 standards for energy efficiency by 30%.	Not Applicable. The Project would not obstruct or interfere with County efforts to provide incentives, such as priority permitting for buildings that exceed Title 24 standards for energy efficiency by 30%.
E-10. Require or provide incentives for new construction to use building materials containing recycled content.	Not Applicable. The Project would not obstruct or interfere with County efforts to require or provide incentives for new construction to use building materials containing recycled content.
E-11. Require new commercial parking lots with over 200 spaces to mitigate heat gain through the use of shade trees, solar arrays or cool pavement.	Not Applicable. The Project would not obstruct or interfere with County efforts to require new commercial parking lots with over 200 spaces to mitigate heat gain through the use of shade trees, solar arrays or cool pavement.
E-12. Require all new construction and major renovation of Multi-unit buildings to be sub-metered to enable each individual unit to monitor energy consumption.	Not Applicable. The Project would not obstruct or interfere with County efforts to require all new construction and major renovation of Multi-unit buildings to be sub-metered to enable each individual unit to monitor energy consumption.
E-13. Establish solar empowerment districts that remove barriers to and facilitate installation of solar PV programs on eligible commercial and industrial buildings and parking lots.	Not Applicable. The Project would not obstruct or interfere with County efforts to establish solar empowerment districts that remove barriers to and facilitate installation of solar PV programs on eligible commercial and industrial buildings and parking lots.
E-14. Facilitate the installation of solar hot water heating systems on large commercial buildings.	Not Applicable. The Project would not obstruct or interfere with County efforts to facilitate the installation of solar hot water heating systems on large commercial buildings.
E-15. Develop a comprehensive residential renewable energy program that provides outreach, financing and other forms of assistance.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a comprehensive residential renewable energy program that provides outreach, financing and other forms of assistance.
E-16. Develop a green jobs program for the unincorporated areas of Alameda County.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a green jobs program for the unincorporated areas of Alameda County.
Water	
WT-1 Encourage residents and businesses to conserve water in existing buildings and landscapes.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop encourage residents and businesses to conserve water in existing buildings and landscapes.
WT-2. Require new landscape projects to reduce outdoor potable water use by 40 percent.	Not Applicable. The Project would not obstruct or interfere with County efforts to require new landscape projects to reduce outdoor potable water use by 40 percent.
WT-3. Adopt an ordinance that allows the installation and use of grey water systems for subsurface irrigation.	Not Applicable. The Project would not obstruct or interfere with County efforts to adopt an ordinance that allows the installation and use of grey water systems for subsurface irrigation.
WT-4. Work with EBMUD and Zone 7 to redesign water bill format to encourage water conservation in residential and commercial users.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with EBMUD and Zone 7 to redesign water bill format to encourage water conservation in residential and commercial users.

Table 16. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
Waste	
WS-1. Increase solid waste reduction and diversion to 90 percent by 2030.	Not Applicable. The Project would not obstruct or interfere with County efforts to increase solid waste reduction and diversion to 90 percent by 2030.
WS-2. Strengthen the construction and demolition debris management ordinance.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with strengthen the construction and demolition debris management ordinance.
WS-3. Develop a food waste collection program and adopt an ordinance that requires all household and commercial food wastes and food-soled paper to be placed in organic carts.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a food waste collection program and adopt an ordinance that requires all household and commercial food wastes and food-soled paper to be placed in organic carts.
WS-4. Work with Stopwaste.Org, Alameda County cities, and other organizations to urge adoption of State and federal legislation that requires extended producer responsibility, and improves the recyclability of products and packaging.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with Stopwaste.Org, Alameda County cities, and other organizations to urge adoption of State and federal legislation that requires extended producer responsibility, and improves the recyclability of products and packaging.
Green Infrastructure	
G-1 Expand the urban forest in order to sequester carbon and reduce building energy consumption.	Not Applicable. The Project would not obstruct or interfere with County efforts to expand the urban forest in order to sequester carbon and reduce building energy consumption.
G-2. Include carbon sequestration as an objective within county-led natural area restoration projects.	Not Applicable. The Project would not obstruct or interfere with County efforts to include carbon sequestration as an objective within county-led natural area restoration projects.
G-3. Establish a local community garden program to increase local food security and provide local recreation amenities.	Not Applicable. The Project would not obstruct or interfere with County efforts to establish a local community garden program to increase local food security and provide local recreation amenities.
G-4. Work with local farmers and agricultural non-profits to develop urban edge farming opportunities in the unincorporated county.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with local farmers and agricultural non-profits to develop urban edge farming opportunities in the unincorporated county.
G-5. Work with local organizations to establish farmers' market sites in the unincorporated county.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with local organizations to establish farmers' market sites in the unincorporated county.

Hazardous Consequence Analysis for the Potentia Viridi BESS Project

MEMORANDUM

To:	Levy Alameda, LLC
From:	Adam Poll, Dudek
Subject:	Hazardous Consequence Analysis for the Potentia Viridi BESS Project
Date:	May 27, 2025
cc:	Ronelle Candia, Dudek
Attachments:	A, Emission Calculations B, Prior Studies on Emissions from Battery Malfunctions C, Dispersion Modeling Outputs

Dudek is pleased to present this hazardous consequence analysis technical memorandum (study) for the Potentia Viridi BESS Project (Project) located in Alameda County, California. The contents and organization of this memorandum are as follows: Executive Summary, Project Description, Codes and Standards, Sensitive Receptors, General Analysis and Methodology, Significance Criteria, Conclusions, and References Cited.

1 Executive Summary

The Project would involve constructing and operating a battery energy storage system (BESS) within the County of Alameda, California. This study evaluated the Project's potential to cause adverse health effects on nearby receptors in the highly unlikely scenario of a thermal runaway event.¹ As further discussed herein, emissions calculations indicated that for the modeled scenarios, the public health impacts from toxic pollutants associated with the worst-case battery cell malfunction scenario would be less than significant.

2 Project Description

The Project proposes to construct a 400-MW BESS facility. The Project would include battery storage containers, inverters and transformers, and an on-site collector substation. The Project would be interconnected at the existing Pacific Gas and Electric (PG&E) Tesla substation and would use battery technology to store electrical energy from the grid for future discharge to the grid when customer demand is high and grid supply is low, providing grid reliability support. When built and operational, the Project would accommodate the integration of additional

¹ Thermal runaway is a situation where the current flowing through the battery cell during either operation or a short circuit causes the cell temperature to rise to the point where a feedback loop can cause a thermal chain reaction.

intermittent renewable energy sources, such as wind and solar, reducing the need to operate natural gas power plants.

The Project will incorporate a battery energy storage facility as well as energy storage being housed within the inverters. The batteries would be housed in racking (similar to computer racking) 7 feet to 9 feet high, to allow efficient airflow between the batteries. The associated inverters, transformers, and switchgear would be located immediately adjacent to the energy storage facilities on concrete pads outdoors. The energy storage system may store energy generated by the project, or it may store energy from the grid.

2.1 Battery Technology Overview

Lithium-ion batteries were introduced commercially by Sony in 1991 for use primarily in consumer products. Since then, they have become the most widely used battery technology for grid-scale energy storage. Lithium-ion batteries have the versatility to handle smaller-scale applications, such as powering electric vehicles, as well as grid-scale applications requiring megawatts of power for hours at a time.

The name lithium-ion batteries is derived from the transfer of lithium ions between the electrodes within a battery cell during operation. Instead of metallic lithium (a reactive substance), lithium-ion batteries use safer lithiated metal oxides as the cathode and carbon as the anode. When a lithium-ion battery cell is charging, lithium ions migrate from the cathode to the anode through a lithium-salt organic solvent catalyst that facilitates ionic movement (the electrolyte). The ions travel back to the cathode when discharging. Cathodes have a more positive electrode potential than anodes (versus the standard lithium reference), thus, they are considered to be the positive terminal of the battery. Similarly, anodes have a more negative electrode potential than cathodes (versus the standard lithium reference), thus, they are considered to be the negative terminal of a battery. The anode and cathode are divided by a separator, often microperforated plastic which is soaked in the electrolyte. The separator allows ions to pass through while maintaining electrical isolation between the electrodes. The entire battery cell is protected by a sealed metallic casing.

The United States' (US) installations of advanced energy storage — almost entirely lithium-ion battery systems — went beyond 3 gigawatt (GW) / 10.5 gigawatt-hours (GWh) in the second quarter of 2024 according to research firm Wood Mackenzie Power & Renewables' which forecasts, then records and analyses energy storage deployments. The Wood Mackenzie team foresees that the US will add around 12.7GW/36.7GWh for full year 2024 and 74.6GW/251.3GWh for the 2024-2028 period (Utility Dive News, Oct 2024).

3 Codes and Standards

3.1 Battery Testing Requirements and Regulations

BESS facilities and batteries are subject to several strict safety codes and standards. Some of the relevant codes and standards are discussed below.

Underwriters Laboratories (UL), a globally recognized safety certification company.

UL9540A: Test Method for Evaluating Thermal Runaway Fire Propagation in Battery Energy Storage Systems – this test methodology evaluates the fire characteristics of battery cells, modules, and

installations that are purposefully induced into thermal runaway. The data generated can be used to determine the fire and explosion protection required for an installation of a BESS.

UL1973: Standard for Batteries for Use in Stationary, Vehicle Auxiliary Power and Light Electric Rail (LER) Applications - This standard evaluates the battery system's ability to safely withstand simulated abuse conditions. This standard evaluates the system based upon the manufacturer's specified charge and discharge parameters. Requires that a BESS is not allowed to be an explosion hazard when exposed to an external fire source and that a single cell failure will not result in a cascading thermal runaway of cells.

UL1741: Inverters, Controllers, Converters, and Interconnection Equipment Standards - These requirements cover inverters, converters, charge controllers, and interconnection system equipment (ISE) intended for use in stand-alone (not grid-connected) or interactive (grid-connected) power systems. Interactive inverters, converters, and ISE are intended to be operated in parallel with an electric power system (EPS) to supply power to common loads.

UL9540: Energy Storage Systems and Equipment – This standard requires compliance with key UL sub-standards as well as standards from other recognized parties to certify safety of an integrated energy storage system.

Institute of Electrical and Electronics Engineers (IEEE): the world's largest technical professional organization dedicated to advancing technology for the benefit of humanity.

IEEE C2: This Code covers basic provisions for safeguarding of persons from hazards arising from the installation, operation, or maintenance of (1) conductors and equipment in electric supply stations, and (2) overhead and underground electric supply and communication lines. It also includes work rules for the construction, maintenance, and operation of electric supply and communication lines and equipment. The Code is applicable to the systems and equipment operated by utilities, or similar systems and equipment, of an industrial establishment or complex under the control of qualified persons.

International Fire Code (IFC): is the model up-to-date fire code addressing conditions hazardous to life and property from fire, explosion, handling or use of hazardous materials and the use and occupancy of buildings and premises.

IFC: Specifies minimum size requiring permits (Lithium, all types, 20 kilowatt-hours (kWh)), specifies maximum limits on sizing for battery systems (Lithium all type, 50 kwh each array), seismic and structural design, spacing (minimum 3 feet separation of arrays), vehicle impact protection, testing, maintenance and repairs, maximum quantities within a building (Lithium of 600 kwh), battery management system (BMS) monitoring, shutdown and notification requirements, automatic smoke detector requirements, automatic fire sprinkler systems, ventilation specifications.

National Fire Protection Association (NFPA): is an international nonprofit organization devoted to eliminating death, injury, property and economic loss due to fire, electrical and related hazards.

NFPA 70: National Electrical Code, addresses electrical design, installation, and inspection.

NFPA 550: Guide to Fire Safety Concepts Tree for Protecting Energy Systems - addresses issues such as utilizing BMS and compatible equipment, ventilation as needed, fire resistive separation, array spacing, signage.

NFPA 855: Standard for the Installation of Stationary Energy Storage Systems - offers comprehensive criteria for the fire protection of BESS installations based on the technology used in BESS, the setting where the technology is being installed, the size and separation of BESS installations, and the fire suppression and control systems in place. Additional considerations include ventilation, detection, signage, listings, and emergency operations responding to BESS emergencies.

California Public Utilities Commission (CPUC): is a regulatory agency responsible for overseeing utility services and infrastructure in California, including electricity, natural gas, telecommunications, water, and transportation. Its mission is to ensure that Californians receive safe, reliable, and affordable utility services. The CPUC sets standards, conducts inspections, and enforces regulations to maintain service quality and public safety. It also addresses consumer complaints, offers financial assistance programs, and promotes clean energy initiatives.

CPUC General Order 167-C: Operational standards and maintenance protocols for electric generation facilities in California. It emphasizes the importance of reliability and safety, detailing requirements for regular inspections, performance monitoring, and reporting. The order mandates that facilities adhere to specific guidelines to ensure consistent operation and prevent outages, with a focus on maintaining equipment and infrastructure. Compliance is enforced through periodic audits and penalties for non-compliance, aiming to uphold high standards in the state's energy sector.

4 Neighboring Uses

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution, as identified by the California Air Resources Board (CARB), include children, older adults, and people with cardiovascular and chronic respiratory diseases. Accordingly, land uses where sensitive-receptor population groups are likely to be located include hospitals, medical clinics, schools, playgrounds, childcare centers, residences, and retirement homes (BAAQMD 2023). These uses are considered to be relatively sensitive to poor air quality because children, elderly people, and the infirm are more susceptible to respiratory distress and other air quality related health problems than the general public. Residential areas are considered sensitive to poor air quality because people usually stay home for extended periods of time, with associated greater exposure to ambient air quality. The closest sensitive receptor to the Project site is a residence located approximately 1,890 feet from the Project's southern boundary. The location of the receptors are shown in Figure 1.

Potentia-Viridi BESS Project

5 General Analysis and Methodology

During normal operations, there will be no toxic air emissions from the Project. The BESS would also be equipped with i) monitoring and control systems, ii) fire detection and protection systems, and iii) gas ventilation systems, among others, to prevent, monitor, and/or control any battery cell malfunctions. However, to determine the worst-case public health impacts for this analysis, this report assumes the highly unlikely event of multiple safety and ventilation system failures which do not control the battery cell malfunction. It is also assumed that the battery cell malfunction continues until the reaction ceases once stored energy has been expended.

In the event of a battery cell malfunction, it's possible that a thermal runaway event and/or a fire could occur. While modern-day systems are designed to contain such fires within a single battery module, if a fire does occur, pollutants could be emitted to the atmosphere. Lithium-ion battery system fires are generally considered Class A (plastics fires, from materials such as the separator) and Class B (flammable liquids, from materials such as the electrolyte) but may also have characteristics of Class C (electrical fires) as well. As such, the pollutants generated are similar to other common residential and commercial fires which result in the emissions of carbon dioxide, carbon monoxide hydrocarbons, and VOCs such as Benzene, (New York Department of Health 2024).

To capture a worst-case scenario, it is assumed that the release of pollutants to the atmosphere would occur within a relatively short and concentrated period of time (i.e., one hour). Emission rates for each pollutant are based on the cell and module level testing data for the proposed BESS equipment. Per the UL9540A testing, emissions are released over the course of approximately two hours. The actual rate of release would be dependent on energy stored within the system and how the local fire department chooses to address the fire (e.g., a passive management approach vs. the application of water).

In the unlikely event of a battery cell malfunction, the primary emissions released would be carbon dioxide (CO₂) and carbon monoxide (CO), along with lesser amounts of other compounds. Table 2 provides a list of chemical constituents that could be emitted from lithium-ion batteries during a thermal runaway event. Two separate evaluations were conducted with respect to evaluating potential impacts of toxic air contaminants (TACs) from a thermal runaway event. Each method used dispersion modeling to calculate offsite concentrations of TACs. The concentrations were then compared to the Office of Environmental Health Hazard Assessment (OEHHA) acute reference exposure levels (RELs), level 1 U.S. Environmental Protection Agency (EPA) Acute Exposure Guideline Levels (AEGLs) if no REL exists, and the OEHHA threshold of 1 for the acute hazard quotient. This assessment also evaluated the potential for a thermal runaway event to cause or contribute to a violation of an ambient air quality standard. The methodology of each is discussed further in this section.

5.1 UL9540A Testing

The applicant has not committed to a particular battery supplier at this time but has narrowed it down to Supplier 1, Supplier 2, or Supplier 3. The UL9540A tests for each of the vendors was provided for review. The emissions profile was unique to each battery vendor. Therefore, when comparing the emission tests for each vendor, it was determined that the most conservative scenario (highest emission rate) was from the Supplier 3 UL9540A test. There were three unique pollutants that had a REL or AEGL from the Supplier 1 UL9540A results that were not present in the Supplier 2 or Supplier 3 results. Therefore, for this analysis, the Supplier 3 emissions were evaluated along with the three pollutants unique to Supplier 1 to represent a worst-case scenario.

The tests showed that in the event of a single battery cell undergoing thermal runaway, there was propagation to two surrounding cells for Supplier 1 and Supplier 3 and to four other cells for Supplier 2. No external flaming or flame venting occurred during the UL9540A testing. In addition, the tests showed that when an entire battery system module was intentionally ignited, there was no propagation to surrounding modules. Because the battery malfunction events discussed above are unlikely to occur, and if such events were to occur, it will occur only within up to three battery cells. During testing of the module (which includes 112 cells for Supplier 1 and 26 cells for Supplier 3), again when one cell underwent thermal runaway it propagated to two adjacent cells, for a total of 3 cells. Therefore, this analysis, which assumes 30 cells would be affected (10 times the UL9540A results), presents a worst-case analysis (i.e., a multi-battery cell malfunction).

5.2 Emissions

Battery cell malfunctions, such as thermal runaway events, can result in the release of toxic emissions and/or flammable gas mixtures to the atmosphere. Several studies have examined the emissions of pollutants from battery off-gassing situations during thermal runaway events, with some studies examining only the concentration of toxic pollutants and others also examining emission rates. The relevant studies are listed in Attachment B. For lithium-ion batteries, the UL9540A testing indicated that the primary toxic pollutants could be any of the pollutants listed in Table 2.

Table 2. Chemical Constituents Emitted from Lithium iron Phosphates Batteries

Chemical Formula	Chemical Name
CH ₄	Methane
C ₂ H ₂	Acetylene
C ₂ H ₄	Ethylene
C ₂ H ₆	Ethane
C ₃ H ₄	Propadiene
C ₃ H ₆	Propene
C ₃ H ₈	Propane
C ₄ (Total)	N/A
C ₅ (Total)	N/A
C ₆ (Total)	N/A
C ₇ (Total)	N/A
C ₇ H ₁₄	Heptene
CO	Carbon Monoxide
CO ₂	Carbon Dioxide
H ₂	Hydrogen
C ₆ H ₆	Benzene
C ₇ H ₈	Toluene
C ₃ H ₆ O ₃	Dimethyl Carbonate
C ₄ H ₈ O ₃	Ethyl Methyl Carbonate

Source: Contemporary Amperex Technology Co., Ltd 2021.

Notes: N/A = not available

Generally, the battery cell will start to off gas through pressure relief vents (or pouch seams) if the temperature exceeds 120°C (DNV GL 2017); however, the battery will not enter thermal runaway until it exceeds the thermal runaway onset temperature, which is usually between 170°C and 220°C, depending on the cathode chemistry.

Based upon recent testing data for representative Project components, seven of these constituents are toxic air contaminants (that have an acute REL or AEGL) that could be potentially released during an accidental event within a BESS that may have an impact on nearby receptors. The hazardous substances include propane, n-butane, i-butane, hexane, benzene, carbon monoxide, and toluene. Detailed emission calculations are included in Attachment A.

5.3 Dispersion Modeling

Air dispersion models calculate the atmospheric transport and fate of pollutants from the emission source. The models calculate the concentration of selected pollutants at specific downwind ground-level points, such as residential or school receptors. The transformation (fate) of an airborne pollutant, its movement with the prevailing winds (transport), its crosswind and vertical movement due to atmospheric turbulence (dispersion), and its removal due to dry and wet deposition are influenced by the pollutant's physical and chemical properties, and by meteorological and environmental conditions. Factors such as distance from the source to the receptor, meteorological conditions, intervening land use and terrain, pollutant release characteristics, and background pollutant concentrations affect the predicted air concentration of an air pollutant. Air dispersion models have the capability to take all of these factors into consideration when calculating downwind ground-level pollutant concentrations.

A dispersion modeling analysis was conducted for TACs emitted from a thermal runaway event on proximate off-site sensitive receptors. The dispersion modeling was performed using AERMOD Version 24142, which is the model the U.S. Environmental Protection Agency (EPA) approved and the Bay Area Air Quality Management District (BAAQMD) recommends for atmospheric dispersion of emissions (BAAQMD 2020). AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain. Principal parameters of AERMOD for the thermal runaway event included the following and are included in Attachment C:

- **Dispersion Model:** The air dispersion model used was AERMOD, Version 24142, with the Lakes Environmental Software implementation/user interface, AERMOD View, Version 13.0.0. A unit emission rate (1 gram per second [g/s]) was normalized over each unique source of emissions for the AERMOD run to obtain the "X/Q" values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength, and is used as a way to simplify the representation of emissions from many sources. The maximum concentrations were determined for the 1-hour averaging period. A separate AERMOD run was performed for the ambient air quality analysis which used the maximum hourly emissions of carbon monoxide (rather than 1 g/s) for the 1-hour and 8-hour averaging periods. Table 3 provides detailed source parameters for modeling emissions with AERMOD. Source parameters were based on information provided by the project applicant and modeling guidance from the BAAQMD and EPA, where applicable (EPA 2015; BAAQMD 2020).

Table 3. Emission Source Parameters

Source ID	Source Name	Source Type	Source Parameters
STCK1	BESS Container	Point	Base Elevation: 431.79 ft Release Height ^a : 9.14 ft

Table 3. Emission Source Parameters

			Emission Rate ¹ : 1 g/s Gas Exit Temperature ^b : 1,160 °F Stack Inside Diameter ^a : 1.36 ft Gas Exit Velocity ^b : 0.87 m/s Gas Exit Flow Rate: 248.78 ft ³ /min Variable Emissions Scenario: None

Sources: ^a project applicant; ^b Ramboll 2024.
Notes: ¹ The emission rate of 1 g/s was used for the TAC emission evaluation. The actual emission rate for carbon monoxide was used for the ambient air quality analysis.
ft = feet; ft³/min = cubic feet per minute; ft/s = feet per second; g/s = grams per second; ID = Identification; K = degrees Kelvin; m = meters; and UTM = Universal Transverse Mercator.

- **Meteorological Data:** The latest three-year meteorological data (2013-2016) for the Livermore Station were obtained from BAAQMD as the recommended meteorological station and input to AERMOD. A wind rose is provided for this station in Figure 2.
- **Urban and Rural Options:** Typically, urban areas have more surface roughness and structures and low-albedo surfaces that absorb more sunlight, and thus, more heat, relative to rural areas. The rural dispersion option was selected based on the predominant development within 2 kilometers of the project site.
- **Terrain Characteristics:** Digital elevation model files were imported into AERMOD so that complex terrain features were evaluated as appropriate for the site. This accounts for complex terrain within 2 kilometers of the site. The National Elevation Dataset (NED) dataset with resolution of 1 arc-second was used. The AERMAP terrain preprocessor, which can process U.S. Geological Survey (USGS) Digital Elevation Model (DEM) data and data from the NED, is also used to generate the terrain elevations for the receptor locations. The AERMAP program generates an output file that contains the receptor pathway data for AERMOD.
- **Sensitive Receptors:** Discrete receptors were placed over residences proximate to the Project site.

Figure 2. Wind Rose of Meteorological Data

5.4 Exposure Assessment

Under the worst-case scenario, the burning and/or venting of the battery cells due to a battery cell malfunction would result in combustion-related emissions. Inhalation is the main pathway by which these emissions could potentially cause public health impacts.

In March 2015, the OEHHA approved the 2015 Risk Assessment Guidelines Manual (OEHHA 2015). The assessment was prepared following the 2015 Risk Assessment Guidelines Manual. Noncancer acute health risk calculations were performed for the project using ground-level unity emission concentration (X/Q) input from AERMOD. The concentration result from AERMOD was then multiplied by the emission rate of each pollutant to determine the project concentration at the maximally impacted residential receptor (MEIR). The project concentration at the MEIR for each pollutant was then compared to the REL (if available) or the Level 1 AEGL.

The noncancer health impact of an inhaled TAC is measured by the hazard quotient, which is the ratio of the ambient concentration of a TAC in units of $\mu\text{g}/\text{m}^3$ divided by the REL, also in units of $\mu\text{g}/\text{m}^3$. The REL is the concentration at or below which no adverse health effects are anticipated. The REL is typically based on health effects on a particular target organ system, such as the respiratory system, liver, or central nervous system. Hazard quotients of individual TACs are then summed for each target organ system to obtain a hazard index. As this is an acute health risk exposure assessment, the maximum 1-hour emission rates from thermal runaway of 30 cells was assumed. The analysis evaluated impacts at the MEIR.

An assessment was also performed to determine whether a potential thermal runaway event would cause or contribute to an exceedance of an ambient air quality standard. The only criteria air pollutant emitted during a potential thermal runaway event would be carbon monoxide.

6 Significance Criteria

The applicable REL or AEGL (level 1) for each pollutant evaluated in this assessment is shown below in Table 4. For the acute hazard index assessment, a significant impact would be defined as having an acute hazard index of over 1 (OEHHA 2015). The state and federal ambient air quality standards are also included for carbon monoxide.

Table 4. Significance Criteria

Chemical Name	REL ($\mu\text{g}/\text{m}^3$)	AEGL ($\mu\text{g}/\text{m}^3$)	Ambient Air Quality Standard ($\mu\text{g}/\text{m}^3$)
Propane	NA	9,920	NA
n-butane	NA	13,074	NA
i-butane	NA	13,074	NA
Carbon monoxide	23,000	NA	State 1-hour: 23,000
			Federal 1-hour: 40,000
			State 8-hour: 10,000
			Federal 8-hour: 10,000
Hexane	NA	10,222	NA
Benzene	27	NA	NA
Toluene	5,000	NA	NA

Source: OEHHA 2020; EPA 2024; CARB 2024.

Notes: N/A = not applicable; REL = reference exposure level; AEGL = acute exposure guideline levels; $\mu\text{g}/\text{m}^3$ = microgram per cubic meter.

7 Results

Table 5 presents the results of the acute exposure results of the thermal runaway scenario of 30 cells as discussed in the methodology above.

Table 5. Acute Risk Results

Pollutant	Project Concentration ($\mu\text{g}/\text{m}^3$)	REL ($\mu\text{g}/\text{m}^3$)	AEGL ($\mu\text{g}/\text{m}^3$)	Acute Hazard Quotient
Propane	0.59	NA	9,920	NA
n-Butane	0.49	NA	13,074	NA
i-Butane	21.00	NA	13,074	NA
Carbon Monoxide	10.30	23,000	NA	4.48E-04
Hexane	2.29	NA	10,222	NA
Benzene	0.002	27	NA	5.78E-05
Toluene	0.0005	5,000	NA	9.19E-08
Hazard Index				5.06E-04

Notes: NA = not applicable; REL = reference exposure level; AEGL = acute exposure guideline levels; $\mu\text{g}/\text{m}^3$ = microgram per cubic meter.

Source: See Attachment A.

As shown in Table 5, the results of the acute risk analysis showed that the emissions from a thermal runaway event (assuming 30 cells) would not exceed the REL or AEGL for any pollutant at the MEIR. Similarly, the acute hazard index would not exceed the threshold of 1 at the MEIR. As such, no adverse health effects are anticipated at the MEIR from exposure to a thermal runaway event. The results from the ambient air quality modeling assessment are presented in Table 6.

Table 6. Ambient Air Quality Assessment Results

Impact Parameter	Applicable Standard	Background Concentration ($\mu\text{g}/\text{m}^3$)	Project Concentration ($\mu\text{g}/\text{m}^3$)	Cumulative Concentration ($\mu\text{g}/\text{m}^3$)	AAQS Threshold ($\mu\text{g}/\text{m}^3$)
1-hour Carbon Monoxide	State	18,902	10.30	18,913	23,000
	Federal	18,902	10.30	18,913	40,000
8-hour Carbon Monoxide	State	4,239	2.33	4,241	10,000
	Federal	4,239	2.33	4,241	10,000

Source: See Attachment A.

Note: $\mu\text{g}/\text{m}^3$ = microgram per cubic meter.

As shown in Table 6, the results of the ambient air quality analysis showed that concentrations at the MEIR would be below the 1-hour and 8-hour carbon monoxide state and federal ambient air quality standards. Therefore, the

Project would not cause or contribute to an exceedance of an ambient air quality standard due to thermal runaway of battery modules offsite.

8 Conclusions

As shown in Section 7, the results of the thermal runaway analysis show that emissions from the BESS would not exceed the acute REL, Level 1 AEGL, or hazard index threshold of 1 at the MEIR. The risk calculations are contained in Attachment A and the dispersion modeling outputs are in Attachment C.

The results determined in this analysis reflect reasonable estimates of source emissions and exhaust characteristics, available meteorological data near the project site, and the use of currently approved air quality models. Given the limits of available tools for such an analysis, the actual impacts may vary from the estimates in this assessment. However, the combined use of the AERMOD dispersion model and the health impact calculations required by OEHHA and BAAQMD tend to over-predict impacts such that they produce conservative (i.e., health-protective) results. Accordingly, the health impacts are not expected to be higher than those estimated in this assessment.

As such, the proposed project would not result in significant impacts to proximate residential receptors.

EPA Monitor Values Report for Pleasanton monitoring station. Background value is from 2023, which is the highest value from 2021-2023.

Attachment B

Prior Studies on Emissions from Battery Malfunctions

Several studies have examined the emissions of pollutants from battery off-gassing situations during thermal runaway events, with some studies examining only the concentration of toxic pollutants and others also examining emission rates. The relevant studies are listed in Table B-1 below.

Table B-1: Studies on Battery Malfunctions

Study	Description
ESRG 2023.	Hazard Mitigation Analysis for Tesla Megapack 2/XL
U9540A Unit Test Report for CATL	9540A Testing for Lithium Iron Phosphate Battery Chemistry
Fisher Engineering 2023.	Fire Protection Engineering Analysis
Fisher Engineering 2022.	UL 9540A unit Level Fire Test Analysis.
DNVGL 2017	Measured characteristics of a wide range of battery types and failures

*** MODEL SETUP OPTIONS SUMMARY

** Model Options Selected:

- * Model Uses Regulatory DEFAULT Options
- * Model Is Setup For Calculation of Average CONCentration Values.
- * NO GAS DEPOSITION Data Provided.
- * NO PARTICLE DEPOSITION Data Provided.
- * Model Uses NO DRY DEPLETION. DDPLETE = F
- * Model Uses NO WET DEPLETION. WETDPLT = F
- * Stack-tip Downwash.
- * Model Accounts for ELEVated Terrain Effects.
- * Use Calms Processing Routine.
- * Use Missing Data Processing Routine.
- * No Exponential Decay.
- * Model Uses RURAL Dispersion Only.
- * TEMP_Sub - Meteorological data includes TEMP substitutions
- * Model Accepts FLAGPOLE Receptor . Heights.
- * The User Specified a Pollutant Type of: VARIOUS

**Model Calculates 1 Short Term Average(s) of: 1-HR

**This Run Includes: 1 Source(s); 1 Source Group(s); and 34
Receptor(s)

with: 1 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 0 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours

b for Both Calm and

Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 137.20 ; Decay
Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.5 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: Potentia Viridi OP HRA.err

**File for Summary of Results: Potentia Viridi OP HRA.sum

*** MODELOPTs: RegDFAULT CONC ELEV FLGPOL RURAL SigA Data

*** MODEL SETUP OPTIONS SUMMARY

** Model Options Selected:

- * Model Uses Regulatory DEFAULT Options
- * Model Is Setup For Calculation of Average CONCentration Values.
- * NO GAS DEPOSITION Data Provided.
- * NO PARTICLE DEPOSITION Data Provided.
- * Model Uses NO DRY DEPLETION. DDPLETE = F
- * Model Uses NO WET DEPLETION. WETDPLT = F
- * Stack-tip Downwash.
- * Model Accounts for ELEVated Terrain Effects.
- * Use Calms Processing Routine.
- * Use Missing Data Processing Routine.
- * No Exponential Decay.
- * Model Uses RURAL Dispersion Only.
- * TEMP_Sub - Meteorological data includes TEMP substitutions
- * Model Accepts FLAGPOLE Receptor . Heights.
- * The User Specified a Pollutant Type of: VARIOUS

**Model Calculates 1 Short Term Average(s) of: 1-HR

**This Run Includes: 1 Source(s); 1 Source Group(s); and 34
Receptor(s)

with: 1 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 0 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

NOTE: METEOROLOGICAL DATA ACTUALLY PROCESSED WILL ALSO DEPEND ON WHAT IS INCLUDED IN THE DATA FILE.

*** MODELOPTs: RegDFault CONC ELEV FLGPOL RURAL SigA Data

*** MODEL SETUP OPTIONS SUMMARY

** Model Options Selected:

- * Model Uses Regulatory DEFAULT Options
- * Model Is Setup For Calculation of Average CONCentration Values.
- * NO GAS DEPOSITION Data Provided.
- * NO PARTICLE DEPOSITION Data Provided.
- * Model Uses NO DRY DEPLETION. DDPLETE = F
- * Model Uses NO WET DEPLETION. WETDPLT = F
- * Stack-tip Downwash.
- * Model Accounts for ELEVated Terrain Effects.
- * Use Calms Processing Routine.
- * Use Missing Data Processing Routine.
- * No Exponential Decay.
- * Model Uses RURAL Dispersion Only.
- * TEMP_Sub - Meteorological data includes TEMP substitutions
- * Model Accepts FLAGPOLE Receptor . Heights.
- * The User Specified a Pollutant Type of: CO

**Model Calculates 2 Short Term Average(s) of: 1-HR 8-HR

**This Run Includes: 1 Source(s); 1 Source Group(s); and 34 Receptor(s)

with: 1 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 0 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
 m for Missing Hours
 b for Both Calm and

Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 137.20 ; Decay
 Coef. = 0.000 ; Rot. Angle = 0.0
 Emission Units = GRAMS/SEC ;
 Emission Rate Unit Factor = 0.10000E+07
 Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.5 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: Potentia Viridi OP HRA.err

**File for Summary of Results: Potentia Viridi OP HRA.sum

*** MODELOPTs: RegDFAULT CONC ELEV FLGPOL RURAL SigA Data

*** MODEL SETUP OPTIONS SUMMARY

** Model Options Selected:

- * Model Uses Regulatory DEFAULT Options
- * Model Is Setup For Calculation of Average CONCentration Values.
- * NO GAS DEPOSITION Data Provided.
- * NO PARTICLE DEPOSITION Data Provided.
- * Model Uses NO DRY DEPLETION. DDPLETE = F
- * Model Uses NO WET DEPLETION. WETDPLT = F
- * Stack-tip Downwash.
- * Model Accounts for ELEVated Terrain Effects.
- * Use Calms Processing Routine.
- * Use Missing Data Processing Routine.
- * No Exponential Decay.
- * Model Uses RURAL Dispersion Only.
- * TEMP_Sub - Meteorological data includes TEMP substitutions
- * Model Accepts FLAGPOLE Receptor . Heights.
- * The User Specified a Pollutant Type of: CO

**Model Calculates 2 Short Term Average(s) of: 1-HR 8-HR

**This Run Includes: 1 Source(s); 1 Source Group(s); and 34
Receptor(s)

with: 1 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 0 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:
 Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
 Keyword)
 Model Outputs External File(s) of High Values for Plotting (PLOTFILE
 Keyword)
 Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
 Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
 m for Missing Hours
 b for Both Calm and

Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 137.20 ; Decay
 Coef. = 0.000 ; Rot. Angle = 0.0
 Emission Units = GRAMS/SEC ;
 Emission Rate Unit Factor = 0.10000E+07
 Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.5 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: Potentia Viridi OP HRA.err

**File for Summary of Results: Potentia Viridi OP HRA.sum

SO _x	sulfur oxides
TAC	toxic air contaminant
ROG	reactive organic compound

INTENTIONALLY LEFT BLANK

Executive Summary

The purpose of this technical report is to assess the potential air quality impacts associated with implementation of the Potentia Viridi BESS Project (Project). This assessment uses the significance thresholds in Appendix G of the California Environmental Quality Act Guidelines.

Project Overview

The Project proposes to develop a utility-scale battery energy storage system (BESS) that would store up to 400 megawatts (MW) / 3,200MWh megawatts hours (MWh) of energy. The Project site includes the BESS site, which is comprised of approximately 70 acres located at 17257 Patterson Pass Road.

Air Quality

The air quality impact analysis evaluated the potential for adverse impacts to air quality due to construction and operational emissions resulting from the Project. Impacts were evaluated for their significance based on the Bay Area Air Quality Management District (BAAQMD) mass daily criteria air pollutant thresholds of significance. Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards (criteria) for outdoor concentrations to protect public health. Criteria air pollutants include ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), particulate matter with an aerodynamic diameter less than or equal to 10 microns (PM_{10}), particulate matter with an aerodynamic diameter less than or equal to 2.5 microns ($PM_{2.5}$), and lead. Pollutants that are evaluated include reactive organic compounds (ROGs) (also referred to as volatile organic compounds), oxides of nitrogen (NO_x), CO, sulfur oxides (SO_x), PM_{10} , and $PM_{2.5}$. ROGs and NO_x are important because they are precursors to O_3 .

Air Quality Plan Consistency

BAAQMD's CEQA Air Quality Guidelines identify a three-step methodology for determining a project's consistency with the current Clean Air Plan, which is BAAQMD's Spare the Air: Cool the Climate – Final 2017 Clean Air Plan. If these three questions can be answered in the affirmative and those conclusions are supported by substantial evidence, then BAAQMD considers the project to be consistent with air quality plans prepared for the Bay Area. The three questions are as follows:

1. Does the project support the goals of the Clean Air Plan?
2. Does the project include applicable control measures from the Clean Air Plan?
3. Does the project disrupt or hinder implementation of any control measures from the Clean Air Plan?

The Project would generate emissions that would be below the BAAQMD thresholds for criteria air pollutants and thus would support the goals of the Clean Air Plan. The Project would also comply with the applicable control measures from the Clean Air Plan and would not disrupt or hinder implementation of any control measures from the Clean Air Plan. Thus, the Project would not conflict with or obstruct implementation of the Clean Air Plan. This impact would be less than significant after mitigation.

Construction Criteria Air Pollutant Emissions

Construction of the Project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and ROG off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). The maximum daily construction emissions would not exceed the BAAQMD significance thresholds for ROG_s, NO_x, PM₁₀ exhaust, and PM_{2.5} during construction. Therefore, the Project would have a less than significant impact.

Operational Criteria Air Pollutant Emissions

The analysis herein conservatively assumed an operational year of 2028. Operation of the Project would generate operational criteria air pollutants from mobile sources (vehicles), area sources (consumer product use and landscape maintenance equipment), energy, off-road sources, and stationary sources. Maximum operational emissions would not exceed the BAAQMD operational significance thresholds for ROG_s, NO_x, PM₁₀ exhaust, and PM_{2.5}. Therefore, the Project would have a less than significant impact during operation.

Cumulative Impacts

The potential for a Project to result in a cumulatively considerable impact, per the BAAQMD guidance and thresholds, is based on the Project's potential to exceed the Project-specific daily thresholds. Because maximum construction and operational emissions would not exceed the BAAQMD significance thresholds for ROG_s, NO_x, PM₁₀ exhaust, and PM_{2.5}, the Project would not result in a cumulatively considerable increase in criteria air pollutants and impacts would be less than significant.

Exposure of Sensitive Receptors

A health risk assessment (HRA) was also conducted to determine the potential impacts of exposure to diesel particulate matter (DPM), which is a toxic air contaminant (TAC), at existing proximate sensitive receptors in the Project vicinity during construction. The results of the HRA found that with incorporation of **MM-AQ-1**, which requires use of Tier 4 Final equipment during construction, the TAC exposure from construction diesel exhaust emissions would result in cancer risk below the BAAQMD 10 in 1 million threshold and chronic risk below the threshold of 1. Therefore, impacts to sensitive receptors would be less than significant with mitigation.

Regarding long-term operations, an operational HRA was also conducted to determine the potential impacts of exposure to DPM, at existing proximate sensitive receptors in the Project vicinity during operation. The results of the operational HRA found that the cancer and chronic health risks during operation of the project would be below the BAAQMD thresholds. Therefore, potential health risk impacts associated with Project operations would be less than significant.

In regard to localized impacts from CO, the Project would comply with the BAAQMD screening criteria for CO hotspots and would result in a less-than-significant impact.

Other Emissions

Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application, which would disperse rapidly from the

Project site and generally occur at magnitudes that would not affect substantial numbers of people. Impacts associated with odors during construction would be less than significant.

Greenhouse Gas Emissions

Global climate change is primarily considered a cumulative impact but must also be evaluated on a Project-level under CEQA. A Project contributes to this potential impact through its incremental emissions combined with the cumulative increase of all other sources of greenhouse gas (GHG) emissions. GHGs are gases that absorb infrared radiation in the atmosphere. Principal GHGs regulated under state and federal law and regulations include carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O). GHG emissions are measured in metric tons of CO₂ equivalent (MT CO₂e), which account for weighted global warming potential (GWP) factors for CH₄ and N₂O.

Project Impacts

Construction of the Project would result in GHG emissions primarily associated with the use of off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles. The Project would generate operational GHG emissions from area sources (landscape maintenance), energy sources (electricity consumption), mobile sources (vehicle trips), off-road sources, stationary sources, refrigerants, water supply and wastewater treatment, and solid waste. Estimated annual Project-generated operational emissions in 2028, plus amortized Project construction emissions would be approximately 3,646 MT CO₂e per year. The Project also would provide a secure and reliable electricity supply, improve community infrastructure, and support sustainable electricity generation.

Furthermore, the proposed Project is deemed to not conflict with the measurable goals outlined in CARB's 2017 Scoping Plan, CARB's 2022 Scoping Plan, and MTC's Plan Bay Area 2050. As such, the Project is not expected to generate GHG emissions that may have a significant impact on the environment, and would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs and the impact would be less than significant.

1 Introduction

1.1 Report Purpose and Scope

The purpose of this technical report is to assess the potential air quality and greenhouse gas (GHG) emissions impacts associated with construction and operation of the Potentia Viridi Energy Storage Project (Project). This analysis uses the significance thresholds in Appendix G of the California Environmental Quality Act (CEQA) Guidelines (14 CCR 15000 et seq.) and the emissions-based significance thresholds recommended by the Bay Area Air Quality Management District (BAAQMD) and other applicable thresholds of significance.

1.2 Project Location

The proposed Project is located in Alameda County, California and has been sited within Assessor Parcel Number (APN) 99B-7890-002-04 located at 17257 Patterson Pass Road, southwest of Interstate 580 and Interstate 205. The development of the BESS facility would occur within an approximately 70-acre lease area within APN 99B-7890-002-04 that is currently comprised of vacant, agricultural farm land used for cattle grazing. Of the approximately 70-acre lease area, approximately 58.8 acres would be permanently disturbed for development of the BESS facility. The Project's gen-tie line would be sited on APNs 99B-7890-2-6 and 99B-7885-12 and would extend from the Project site across Patterson Pass Rd, and over additional agricultural lands surrounding the Tesla Substation which is located directly to the east. In addition to the Tesla Substation, the Project site and gen-tie route are surrounded by vacant rural agricultural land, multiple high-voltage transmission lines, rural roads, and a railroad line. The nearest settlement is the City of Tracy approximately 2.5 miles to the east. The area surrounding the Tesla Substation is sparsely developed for residential use, with the nearest residence, which is also owned by the same landowner leasing the area for the Project's gen-tie line, is approximately 1,500 feet southeast of the Project site and 560 feet south of the proposed gen-tie line. The next closest residence is approximately 3,500 feet east of the project site and 2,300 feet east of the proposed gen-tie line.

1.3 Project Description

The Project proposes to construct a 400-MW BESS facility. The Project would include battery storage containers, inverters and transformers, and an on-site collector substation. The Project would be interconnected at the existing Pacific Gas and Electric (PG&E) Tesla substation and would use battery technology to store electrical energy from the grid for future discharge to the grid when customer demand is high and grid supply is low, providing grid reliability support. When built and operational, the Project would accommodate the integration of additional intermittent renewable energy sources, such as wind and solar, reducing the need to operate natural gas power plants.

1.4 Project Design Features

The Project includes project design features (PDFs) to proactively reduce potential Project-generated criteria air pollutant, toxic air contaminant (TAC), and GHG emissions associated with Project construction and/or operation.

BAAQMD's CEQA Air Quality Guidelines recommend construction best management practices (BMPs) for all projects. Consistent with BAAQMD's recommendations, the Project includes PDF-AQ/GHG-1, as follows, to reduce potential Project-generated emissions during construction (BAAQMD 2022).

PDF-AQ/GHG-1: The Project shall implement the following during construction:

1. All exposed surfaces (e.g., parking/staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day during active periods.
1. All haul trucks transporting soil, sand, or other loose material off site shall be covered.
2. All visible mud or dirt track-out onto local roads shall be removed using wet power vacuum street sweepers when mud or dirt track-out is present. The use of dry power sweeping is prohibited.
2. All vehicle speeds on unpaved roads shall be limited to 15 mph.
3. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
4. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure Title 13, Section 2485 of the California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
5. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
6. A publicly visible sign shall be posted with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.

PDF-AQ-1, would be required as County-imposed Conditions of Approval to ensure they are implemented during construction of the proposed Project.

INTENTIONALLY LEFT BLANK

2 Air Quality

2.1 Environmental Setting

The Project Site is located within the boundaries of the San Francisco Bay Area Air Basin (SFBAAB). The SFBAAB encompasses all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara Counties, and the southern portions of Solano and Sonoma Counties.

Air pollutants are emitted by a variety of sources, including mobile sources (vehicles), area sources (hearths, consumer product use, architectural coatings, and landscape maintenance equipment), energy sources (natural gas), and stationary sources (generators or other stationary equipment). Some air pollutants need to be examined at the local level, and others are predominantly an issue at the regional level. For instance, ozone (O_3) is formed in the atmosphere in the presence of sunlight by a series of chemical reactions involving oxides of nitrogen (NO_x) and reactive organic gases (ROGs) (also termed volatile organic compounds [VOCs]). Because these reactions are broad scale in effects, O_3 is typically analyzed at the regional level (i.e., in the SFBAAB) rather than the local level. On the other hand, air pollutants such as coarse particulate matter (particulate matter with an aerodynamic diameter less than or equal to 10 microns, or PM_{10}), fine particulate matter (particulate matter with an aerodynamic diameter less than or equal to 2.5 microns, or $PM_{2.5}$), carbon monoxide (CO), and TACs are a potential concern in the immediate vicinity of the pollutant source because the pollutants are emitted directly by or are formed close to the source. Therefore, the study area for emissions of PM_{10} , $PM_{2.5}$, CO, and TACs is the local area near the source, such as in the vicinity of the Project Site, and the study area for regional pollutants such as NO_x and ROGs is the entire SFBAAB.

2.1.1 Climate and Topography

Air quality is a function of the rate and location of pollutant emissions under the influence of meteorological conditions and topographic features that influence pollutant movement and dispersal. Atmospheric conditions such as wind speed, wind direction, atmospheric stability, and air temperature gradients interact with the physical features of the landscape to determine the movement and dispersal of air pollutants, and consequently affect air quality.

The climate of the SFBAAB is determined largely by a high-pressure system that is usually present over the eastern Pacific Ocean off the west coast of North America. During winter, the Pacific high-pressure system shifts southward, allowing more storms to pass through the region. During summer and early fall, when few storms pass through the region, emissions generated within the Bay Area can combine with abundant sunshine under the restraining influences of topography and subsidence inversions to create conditions that are conducive to the formation of photochemical pollutants, such as O_3 , and secondary particulates, such as nitrates and sulfates.

In the SFBAAB, temperature inversions can often occur during the summer and winter months. An inversion is a layer of warmer air over a layer of cooler air that traps and concentrates pollutants near the ground. As such, the highest air pollutant concentrations in the SFBAAB generally occur during inversions (BAAQMD 2023).

The Project Site is located in the Livermore Valley climatological subregion. Specific conditions for the subregion are described in BAAQMD's California Environmental Quality Act Air Quality Guidelines (BAAQMD 2023) as follows:

The Livermore Valley is a sheltered inland valley near the eastern border of SFBAAB. The western side of the valley is bordered by 1,000 to 1,500 foot hills with two gaps connecting the valley to the central SFBAAB, the Hayward Pass and Niles Canyon. The eastern side of the valley also is bordered by 1,000 to 1,500 foothills with one major passage to the San Joaquin Valley called the Altamont Pass and several secondary passages. To the north lie the Black Hills and Mount Diablo. A northwest to southeast channel connects the Diablo Valley to the Livermore Valley. The south side of the Livermore Valley is bordered by mountains approximately 3,000 to 3,500 feet high.

During the summer months, when there is a strong inversion with a low ceiling, air movement is weak and pollutants become trapped and concentrated. Maximum summer temperatures in the Livermore Valley range from the high-80's to the low-90's, with extremes in the 100's. At other times in the summer, a strong Pacific high pressure cell from the west, coupled with hot inland temperatures causes a strong onshore pressure gradient which produces a strong, afternoon wind. With a weak temperature inversion, air moves over the hills with ease, dispersing pollutants.

In the winter, with the exception of an occasional storm moving through the area, air movement is often dictated by local conditions. At night and early morning, especially under clear, calm and cold conditions, gravity drives cold air downward. The cold air drains off the hills and moves into the gaps and passes. On the eastern side of the valley the prevailing winds blow from north, northeast and east out of the Altamont Pass. Winds are light during the late night and early morning hours. Winter daytime winds sometimes flow from the south through the Altamont Pass to the San Joaquin Valley. Average winter maximum temperatures range from the high-50's to the low-60's, while minimum temperatures are from the mid-to-high-30's, with extremes in the high teens and low-20's.

Air pollution potential is high in the Livermore Valley, especially for photochemical pollutants in the summer and fall. High temperatures increase the potential for ozone to build up. The valley not only traps locally generated pollutants but can be the receptor of ozone and ozone precursors from San Francisco, Alameda, Contra Costa and Santa Clara counties. On northeasterly wind flow days, most common in the early fall, ozone may be carried west from the San Joaquin Valley to the Livermore Valley.

During the winter, the sheltering effect of the valley, its distance from moderating water bodies, and the presence of a strong high pressure system contribute to the development of strong, surface-based temperature inversions. Pollutants such as carbon monoxide and particulate matter, generated by motor vehicles, fireplaces and agricultural burning, can become concentrated. Air pollution problems could intensify because of population growth and increased commuting to and through the subregion (BAAQMD 2023).

2.1.2 Pollutants and Effects

2.1.2.1 Criteria Air Pollutants

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. The federal and state standards have been set, with an adequate margin of safety, at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Pollutants of concern include O₃, NO₂, CO, sulfur dioxide (SO₂), PM₁₀, PM_{2.5}, and lead. These pollutants

are discussed in the following paragraphs.¹ In California, sulfates, vinyl chloride, hydrogen sulfide, and visibility-reducing particles are also regulated as criteria air pollutants.

Ozone (O₃). O₃ is a strong-smelling, pale blue, reactive, toxic chemical gas consisting of three oxygen atoms. It is a secondary pollutant formed in the atmosphere by a photochemical process involving the sun's energy and O₃ precursors. These precursors are mainly NO_x and ROG_s. The maximum effects of precursor emissions on O₃ concentrations usually occur several hours after they are emitted and many miles from the source. Meteorology and terrain play major roles in O₃ formation, and ideal conditions occur during summer and early autumn on days with low wind speeds or stagnant air, warm temperatures, and cloudless skies. O₃ exists in the upper atmosphere O₃ layer (stratospheric O₃) and at the Earth's surface in the troposphere.² The O₃ that the U.S. Environmental Protection Agency (EPA) and the CARB regulate as a criteria air pollutant is produced close to the ground level, where people live, exercise, and breathe. Ground-level O₃ is a harmful air pollutant that causes numerous adverse health effects and is thus considered "bad" O₃. Stratospheric, or "good," O₃ occurs naturally in the upper atmosphere, where it reduces the amount of ultraviolet light (i.e., solar radiation) entering the Earth's atmosphere. Without the protection of the beneficial stratospheric O₃ layer, plant and animal life would be seriously harmed.

O₃ in the troposphere causes numerous adverse health effects; short-term exposures (lasting for a few hours) to O₃ at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes (EPA 2013). These health problems are particularly acute in sensitive receptors such as the sick, the elderly, and young children.

Nitrogen Dioxide (NO₂). NO₂ is a brownish, highly reactive gas that is present in all urban atmospheres. The major mechanism for the formation of NO₂ in the atmosphere is the oxidation of the primary air pollutant nitric oxide (NO), which is a colorless, odorless gas. NO_x plays a major role, together with ROG_s, in the atmospheric reactions that produce O₃. NO_x is formed from fuel combustion under high temperature or pressure. In addition, NO_x is an important precursor to acid rain and may affect both terrestrial and aquatic ecosystems. The two major emissions sources are transportation and stationary fuel combustion sources such as electric utility and industrial boilers.

NO₂ can irritate the lungs, cause bronchitis and pneumonia, and lower resistance to respiratory infections (EPA 2016a).

Carbon Monoxide (CO). CO is a colorless, odorless gas formed by the incomplete combustion of hydrocarbon, or fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. In urban areas, such as the Project location, automobile exhaust accounts for the majority of CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions—primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, which is a typical situation at dusk in urban areas from November to February. The highest levels of CO typically occur during the colder months of the year, when inversion conditions are more frequent.

¹ The following descriptions of health effects for each of the criteria air pollutants associated with Project construction and operations are based on the U.S. Environmental Protection Agency's "Criteria Air Pollutants" (EPA 2023a) and the California Air Resources Board's "Glossary" (CARB 2023b) published information.

² The troposphere is the layer of the Earth's atmosphere nearest to the surface of the Earth. The troposphere extends outward about 5 miles at the poles and about 10 miles at the equator.

In terms of adverse health effects, CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions.

Sulfur Dioxide (SO₂). SO₂ is a colorless, pungent gas formed primarily from incomplete combustion of sulfur-containing fossil fuels. The main sources of SO₂ are coal and oil used in power plants and industries; as such, the highest levels of SO₂ are generally found near large industrial complexes. In recent years, SO₂ concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of SO₂ and limits on the sulfur content of fuels.

SO₂ is an irritant gas that attacks the throat and lungs and can cause acute respiratory symptoms and diminished ventilator function in children. When combined with particulate matter, SO₂ can injure lung tissue and reduce visibility and the level of sunlight. SO₂ can also yellow plant leaves and erode iron and steel.

Particulate Matter (PM). Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter can form when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. PM_{2.5} and PM₁₀ represent fractions of particulate matter. Coarse particulate matter (PM₁₀) consists of particulate matter that is 10 microns or less in diameter and is about 1/7 the thickness of a human hair. Major sources of PM₁₀ include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood-burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions. Fine particulate matter (PM_{2.5}) consists of particulate matter that is 2.5 microns or less in diameter and is roughly 1/28 the diameter of a human hair. PM_{2.5} results from fuel combustion (e.g., from motor vehicles and power generation and industrial facilities), residential fireplaces, and woodstoves. In addition, PM_{2.5} can be formed in the atmosphere from gases such as sulfur oxides (SO_x), NO_x, and ROG_s.

PM_{2.5} and PM₁₀ pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract. PM_{2.5} and PM₁₀ can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances such as lead, sulfates, and nitrates can cause lung damage directly or be absorbed into the blood stream, causing damage elsewhere in the body. Additionally, these substances can transport adsorbed gases such as chlorides or ammonium into the lungs, also causing injury. Whereas PM₁₀ tends to collect in the upper portion of the respiratory system, PM_{2.5} is so tiny that it can penetrate deeper into the lungs and damage lung tissue. Suspended particulates also damage and discolor surfaces on which they settle and produce haze and reduce regional visibility.

People with influenza, people with chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death as a result of breathing particulate matter. People with bronchitis can expect aggravated symptoms from breathing in particulate matter. Children may experience a decline in lung function due to breathing in PM₁₀ and PM_{2.5} (EPA 2009).

Lead. Lead in the atmosphere occurs as particulate matter. Sources of lead include leaded gasoline; the manufacturing of batteries, paints, ink, ceramics, and ammunition; and secondary lead smelters. Prior to 1978, mobile emissions were the primary source of atmospheric lead. Between 1978 and 1987, the phaseout of leaded gasoline reduced the overall inventory of airborne lead by nearly 95%. With the phaseout of leaded gasoline,

secondary lead smelters, battery recycling, and manufacturing facilities are becoming lead-emissions sources of greater concern.

Prolonged exposure to atmospheric lead poses a serious threat to human health. Health effects associated with exposure to lead include gastrointestinal disturbances, anemia, kidney disease, and in severe cases, neuromuscular and neurological dysfunction. Of particular concern are low-level lead exposures during infancy and childhood. Such exposures are associated with decrements in neurobehavioral performance, including IQ performance, psychomotor performance, reaction time, and growth. Children are highly susceptible to the effects of lead.

Reactive Organic Gases. Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of O₃ are referred to and regulated as ROG_s or VOC_s. Combustion engine exhaust, oil refineries, and fossil-fueled power plants are the sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry-cleaning solutions, and paint.

The primary health effects of ROG_s result from the formation of O₃ and its related health effects. High levels of ROG_s in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered TAC_s.

Sulfates. Sulfates are the fully oxidized form of sulfur, which typically occur in combination with metals or hydrogen ions. Sulfates are produced from reactions of SO₂ in the atmosphere and can result in respiratory impairment, as well as reduced visibility.

Vinyl Chloride. Vinyl chloride is a colorless gas with a mild, sweet odor, which has been detected near landfills, sewage plants, and hazardous waste sites, due to the microbial breakdown of chlorinated solvents. Short-term exposure to high levels of vinyl chloride in air can cause nervous system effects, such as dizziness, drowsiness, and headaches. Long-term exposure through inhalation can cause liver damage, including liver cancer.

Hydrogen Sulfide. Hydrogen sulfide is a colorless and flammable gas that has a characteristic odor of rotten eggs. Sources of hydrogen sulfide include geothermal power plants, petroleum refineries, sewers, and sewage treatment plants. Exposure to hydrogen sulfide can result in nuisance odors, as well as headaches and breathing difficulties at higher concentrations.

Visibility-Reducing Particles. Visibility-reducing particles are any particles in the air that obstruct the range of visibility. Effects of reduced visibility can include obscuring the viewshed of natural scenery, reducing airport safety, and discouraging tourism. Sources of visibility-reducing particles are the same as for PM_{2.5}.

2.1.2.2 Non-Criteria Pollutants

Toxic Air Contaminants (TACs). A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute and/or chronic noncancer health effects. A toxic substance released into the air is considered a TAC. TACs are identified by federal and state agencies based on a review of available scientific evidence. In the State of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management and reduction was designed to protect residents from the health effects of toxic substances in the air. In addition, the California Air Toxics “Hot Spots” Information and Assessment Act, Assembly Bill (AB) 2588, was enacted by the legislature in 1987 to address public concern over the release of TACs

into the atmosphere. The law requires facilities emitting toxic substances to provide local air pollution control districts with information that will allow an assessment of the air toxics problem, identification of air toxics emissions sources, location of resulting hotspots, notification of the public exposed to significant risk, and development of effective strategies to reduce potential risks to the public over 5 years.

Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources such as automobiles; and area sources such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced on either short-term (acute) or long-term (chronic) exposure to a given TAC.

Diesel Particulate Matter (DPM). DPM is part of a complex mixture that makes up diesel exhaust. Diesel exhaust is composed of two phases, gas and particle, both of which contribute to health risks. More than 90% of DPM is less than 1 micrometer in diameter (about 1/70th the diameter of a human hair), and thus is a subset of PM_{2.5} (CARB 2023c). DPM is typically composed of carbon particles (“soot,” also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene (CARB 2023c). CARB classified “particulate emissions from diesel-fueled engines” (i.e., DPM) as a TAC in August 1998 (17 CCR 93000). DPM is emitted from a broad range of diesel engines: on-road diesel engines of trucks, buses, and cars and off-road diesel engines including locomotives, marine vessels, and heavy-duty construction equipment, among others. Approximately 70% of all airborne cancer risk in California is associated with DPM (CARB 2000). To reduce the cancer risk associated with DPM, CARB adopted a diesel risk reduction plan in 2000 (CARB 2000). Because it is part of PM_{2.5}, DPM also contributes to the same non-cancer health effects as PM_{2.5} exposure. These effects include premature death; hospitalizations and emergency department visits for exacerbated chronic heart and lung disease, including asthma; increased respiratory symptoms; and decreased lung function in children. Several studies suggest that exposure to DPM may also facilitate development of new allergies (CARB 2023c). Those most vulnerable to non-cancer health effects are children whose lungs are still developing and the elderly who often have chronic health problems.

Odorous Compounds. Odors are generally regarded as an annoyance rather than a health hazard. Manifestations of a person’s reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting and headache). The ability to detect odors varies considerably among the population and overall is quite subjective. People may have different reactions to the same odor. An odor that is offensive to one person may be perfectly acceptable to another (e.g., coffee roaster). An unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. In a phenomenon known as odor fatigue, a person can become desensitized to almost any odor, and recognition may only occur with an alteration in the intensity. The occurrence and severity of odor impacts depend on the nature, frequency, and intensity of the source; wind speed and direction; and the sensitivity of receptors.

2.1.3 Sensitive Receptors

Air quality varies as a direct function of the amount of pollutants emitted into the atmosphere, the size and topography of the air basin, and the prevailing meteorological conditions. Air quality problems arise when the rate of pollutant emissions exceeds the rate of dispersion.

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. People most likely to be affected by air pollution, as identified by the California Air Resources Board (CARB), include children, older adults, and people with cardiovascular and chronic respiratory diseases. Accordingly, land uses where sensitive-receptor population groups are likely to be located include hospitals, medical clinics, schools, playgrounds, childcare centers, residences, and retirement homes (BAAQMD 2023). These uses are considered to be relatively sensitive to poor air quality because children, elderly people, and the infirm are more susceptible to respiratory distress and other air quality related health problems than the general public. Residential areas are considered sensitive to poor air quality because people usually stay home for extended periods of time, with associated greater exposure to ambient air quality. The closest sensitive receptor to the Project site is a residence located approximately 400 feet from the Project's southern boundary.

2.2 Regulatory Setting

2.2.1 Federal

2.2.1.1 Criteria Pollutants

The federal Clean Air Act (CAA), passed in 1970 and last amended in 1990, forms the basis for the national air pollution control effort. The EPA is responsible for implementing most aspects of the CAA, including the setting of National Ambient Air Quality Standards (NAAQS) for major air pollutants, hazardous air pollutant (HAP) standards, approval of state attainment plans, motor vehicle emission standards, stationary source emission standards and permits, acid rain control measures, stratospheric O₃ protection, and enforcement provisions.

NAAQS are established by the EPA for “criteria pollutants” under the CAA, which are O₃, CO, NO₂, SO₂, PM₁₀, PM_{2.5}, and lead. The NAAQS describe acceptable air quality conditions designed to protect the health and welfare of the citizens of the nation. The CAA requires the EPA to reassess the NAAQS at least every 5 years to determine whether adopted standards are adequate to protect public health based on current scientific evidence. States with areas that exceed the NAAQS must prepare a state implementation plan (SIP) that demonstrates how those areas will attain the standards within mandated time frames.

The EPA has also adopted technology-based standards that limit the emissions of criteria pollutants from new or modified facilities in specific source categories. These standards are referred to as New Source Performance Standards and are found in 40 Code of Federal Regulations (CFR) Part 60. The applicability of these standards depends on the equipment size or rating; material or fuel process rate; and/or the date of construction, modification, or reconstruction. In the event that emergency backup generators are required for project facilities, the Project's diesel-powered emergency generators would be subject to Subpart IIII, which establishes emission and operational limits of criteria pollutants for new stationary compression ignition engines. To comply with the requirements of Subpart IIII, the Project's diesel-fired emergency generators would be operated and maintained as per the manufacturer specifications and would be certified to comply with Tier 4 emission rates.

2.2.1.2 Hazardous Air Pollutants

The 1977 CAA Amendments required the EPA to identify national emission standards for hazardous air pollutants to protect the public health and welfare. HAPs include certain volatile organic chemicals, pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other

mammals. Under the 1990 CAA Amendments, which expanded the control program for HAPs, 189 substances and chemical families were identified as HAPs.

Corporate Average Fuel Economy Standards

Established by the U.S. Congress in 1975, the Corporate Average Fuel Economy (CAFE) standards reduce energy consumption by increasing the fuel economy of cars and light trucks. The National Highway Traffic Safety Administration (NHTSA) and USEPA jointly administer the CAFE standards. The U.S. Congress has specified that CAFE standards must be set at the “maximum feasible level” with consideration given for: (1) technological feasibility; (2) economic practicality; (3) effect of other standards on fuel economy; and (4) need for the nation to conserve energy (NHTSA, 2020). Fuel efficiency standards for medium- and heavy-duty trucks have been jointly developed by USEPA and NHTSA.

2.2.2 State

2.2.2.1 Criteria Pollutants

The federal Clean Air Act (CAA), passed in 1970 and last amended in 1990, forms the basis for the national air pollution control effort. The EPA is responsible for implementing most aspects of the CAA, including the setting of National Ambient Air Quality Standards (NAAQS) for major air pollutants, hazardous air pollutant (HAP) standards, approval of state attainment plans, motor vehicle emission standards, stationary source emission standards and permits, acid rain control measures, stratospheric O₃ protection, and enforcement provisions.

NAAQS are established by the EPA for “criteria pollutants” under the CAA, which are O₃, CO, NO₂, SO₂, PM₁₀, PM_{2.5}, and lead. The NAAQS describe acceptable air quality conditions designed to protect the health and welfare of the citizens of the nation. The CAA requires the EPA to reassess the NAAQS at least every 5 years to determine whether adopted standards are adequate to protect public health based on current scientific evidence. States with areas that exceed the NAAQS must prepare a state implementation plan (SIP) that demonstrates how those areas will attain the standards within mandated time frames.

The EPA has also adopted technology-based standards that limit the emissions of criteria pollutants from new or modified facilities in specific source categories. These standards are referred to as New Source Performance Standards and are found in 40 Code of Federal Regulations (CFR) Part 60. The applicability of these standards depends on the equipment size or rating; material or fuel process rate; and/or the date of construction, modification, or reconstruction. In the event that emergency backup generators are required for project facilities, the Project’s diesel-powered emergency generators would be subject to Subpart IIII, which establishes emission and operational limits of criteria pollutants for new stationary compression ignition engines. To comply with the requirements of Subpart IIII, the Project’s diesel-fired emergency generators would be operated and maintained as per the manufacturer specifications and would be certified to comply with Tier 4 emission rates.

2.2.2.2 Toxic Air Contaminants

The state Air Toxics Program was established in 1983 under AB 1807 (Tanner). The California TAC list identifies more than 700 pollutants, of which carcinogenic and noncarcinogenic toxicity criteria have been established for a subset of these pollutants pursuant to the California Health and Safety Code. In accordance with AB 2728, the state list includes the (federal) HAPs. The Air Toxics “Hot Spots” Information and Assessment Act of 1987 (AB 2588) seeks to identify and evaluate risk from air toxics sources; however, AB 2588 does not regulate air toxics emissions.

TAC emissions from individual facilities are quantified and prioritized. “High-priority” facilities are required to perform a health risk assessment (HRA), and if specific thresholds are exceeded, are required to communicate the results to the public in the form of notices and public meetings.

In 2000, CARB approved a comprehensive Diesel Risk Reduction Plan to reduce diesel emissions from both new and existing diesel-fueled vehicles and engines. The regulation was anticipated to result in an 80% decrease in statewide diesel health risk in 2020 compared with the diesel risk in 2000. Additional regulations apply to new trucks and diesel fuel, including the On-Road Heavy Duty Diesel Vehicle (In-Use) Regulation, the On-Road Heavy Duty (New) Vehicle Program, the In Use Off-Road Diesel Vehicle Regulation, and the New Off-Road Compression-Ignition (Diesel) Engines and Equipment program. All of these regulations and programs have timetables by which manufacturers must comply and existing operators must upgrade their diesel powered equipment. Several Airborne Toxic Control Measures (ATCM) that reduce diesel emissions include In-Use Off-Road Diesel-Fueled Fleets (13 CCR 2449 et seq.) and In-Use On-Road Diesel-Fueled Vehicles (13 CCR 2025). CARB established the ATCM for Stationary Compression Ignition Engines (17 CCR Section 93115) to reduce diesel particulate matter (DPM) and criteria pollutant emissions from stationary diesel-fueled compression ignition engines through fuel requirements, operational restrictions, and emission limits.

California Health and Safety Code Section 41700

This section of the Health and Safety Code states that a person shall not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any of those persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property. This section also applies to sources of objectionable odors.

2.2.3 Local

2.2.3.1 Bay Area Air Quality Management District

BAAQMD is the regional agency responsible for the regulation and enforcement of federal, state, and local air pollution control regulations in the SFBAAB, where the Project Site is located. BAAQMD’s clean air strategy includes the preparation of plans for the attainment of ambient air quality standards, adoption and enforcement of rules and regulations concerning sources of air pollution, issuance of permits for stationary sources of air pollution, inspection of stationary sources of air pollution and response to citizen complaints, monitoring of ambient air quality and meteorological conditions, and implementation of programs and regulations required by the federal and California Clean Air Acts.

On April 19, 2017, BAAQMD adopted Spare the Air: Cool the Climate – Final 2017 Clean Air Plan (2017 Clean Air Plan; BAAQMD 2017b). The 2017 Clean Air Plan provides a regional strategy to protect public health and protect the climate. To protect public health, the 2017 Clean Air Plan includes all feasible measures to reduce emissions of O₃ precursors (ROGs and NO_x) and reduce O₃ transport to neighboring air basins. In addition, the 2017 Clean Air Plan builds on BAAQMD efforts to reduce PM_{2.5} and TACs. To protect the climate, the 2017 Clean Air Plan defines a vision for transitioning the region to a post-carbon economy needed to achieve ambitious GHG reduction targets for 2030 and 2050 and provides a regional climate protection strategy that will put the Bay Area on a pathway to achieve those GHG reduction targets.

BAAQMD establishes and administers a program of rules and regulations to attain and maintain state and national air quality standards and regulations related to TACs. The rules and regulations that may apply to the project include, but would not be limited to, the following:

- **Regulation 2, Rule 1 – Permits.** This rule specifies the requirements for authorities to construct and permits.
- **Regulation 6, Rule 1 – General Requirements.** This rule limits the quantity of particulate matter in the atmosphere through the establishment of limitations on emission rates, concentration, visible emissions, and opacity.
- **Regulation 6, Rule 3 – Wood-Burning Devices.** This rule limits the emissions of particulate matter and visible emissions from wood-burning devices used for primary heat, supplemental heat, or ambiance.
- **Regulation 6, Rule 6 – Prohibition of Trackout.** This rule addresses fugitive road dust emissions associated with trackout of solid materials onto paved public roads outside the boundaries of large bulk material sites, large construction sites, and large disturbed surface sites (sites of 1 acre or more).
- **Regulation 8, Rule 1 – General Provisions.** This rule limits the emission of organic compounds into the atmosphere.
- **Regulation 8, Rule 3 – Architectural Coatings.** This rule limits the quantity of ROGs in architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the BAAQMD.
- **Regulation 8, Rule 15 – Emulsified and Liquid Asphalts.** This rule limits the emissions of ROGs caused by the use of emulsified and liquid asphalt in paving materials and paving and maintenance operations.

2.2.3.2 County of Alameda

The County's East County Area Plan includes goals and policies that are designed to reduce the emissions of criteria air pollutants, in buildings, conservation, and other methods of efficiency. The goals and policies that are related directly and indirectly to air quality are as follows (County of Alameda 2000):

- **Goal:** To ensure that air pollution levels do not threaten public health and safety, economic development or future growth.
 - **Policy 291.** The County shall strive to meet federal and state air quality standards for local air pollutants of concern. In that that standards are exceeded; the County shall require appropriate mitigation measures on new development.
 - **Policy 292:** The County shall coordinate subregional air quality planning and mitigation among East County cities using the result of the biennial monitoring report.
 - **Policy 293.** The County shall support the BAAQMD in monitoring air pollutants of concern on a continuous basis.
 - **Policy 294.** The County shall require new development projects to include traffic and air pollutant reduction measures to help attain air quality standards. For non-residential projects, these measures could include Transportation Demand Management Programs such as ridesharing and transit promotion; for residential projects, these measures could include site plan features to reduce traffic trip generation such as mixed use development and transit-oriented development.

- **Policy 295.** The County shall require major projects of commercial or industrial nature to include bicycle storage facilities for employees and customers, shower/locker areas, and other facilities identified in the East County Bicycle Plan for employees that commute using bicycles.
- **Policy 296.** The County shall review the cumulative impact of proposed project for their potential effect on air quality conditions.
- **Policy 297.** The County shall coordinate air quality planning efforts with other local, regional and state agencies.
- **Policy 298.** The County shall address air quality as a factor in its regional element to assist cities in their environmental review procedures.
- **Policy 299.** The County shall require projects that generate high levels of air pollutants, such as manufacturing facilities, hazardous waste handling operations, and drive-through restaurants and banks, to incorporate air quality mitigations in their designs.
- **Policy 300.** The County shall review proposed projects for their potential to generate hazardous air pollutants.
- **Policy 301.** The County shall only approve new air pollution point sources such as manufacturing and extraction facilities when they are located away from residential areas and sensitive receptors.
- **Policy 302.** The County shall include buffer zones within new residential and sensitive receptor site plans to separate those uses from freeways, arterials, point sources and hazardous material locations.
- **Policy 303.** The County shall incorporate the provisions of the MTC, ABAG, BAAQMD guidelines into project review procedures.
- **Policy 304.** The County shall notify cities and the BAAQMD of proposed projects which may significantly affect air quality.
- **Policy 305.** The County shall cooperate with the BAAQMD and CARB in their enforcement of the provisions of the Clean Air Act, state, regional policies and established standards for air quality.
- **Policy COS-14.9. Significant Producers of Air Pollutants.** Require projects that generate potentially significant levels of air pollutants and/or GHGs such as quarries, landfill operations, or large land development projects to incorporate renewable energy, and the best available control technologies and practices into the project design.

2.3 Regional and Local Air Quality

2.3.1 San Francisco Bay Area Air Basin Attainment Designation

Pursuant to the 1990 CAA Amendments, EPA classifies air basins (or portions thereof) as “attainment” or “nonattainment” for each criteria air pollutant, based on whether the NAAQS have been achieved. Generally, if the recorded concentrations of a pollutant are lower than the standard, the area is classified as “attainment” for that pollutant. If an area exceeds the standard, the area is classified as “nonattainment” for that pollutant. As previously

discussed, these standards are set by EPA or CARB for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or the public welfare. If there is not enough data available to determine whether the standard is exceeded in an area, the area is designated as “unclassified” or “unclassifiable.”

The designation of “unclassifiable/attainment” means that the area meets the standard or is expected to be meet the standard despite a lack of monitoring data. Areas that achieve the standards after a nonattainment designation are redesignated as maintenance areas and must have approved maintenance plans to ensure continued attainment of the standards. The California Clean Air Act, like its federal counterpart, called for the designation of areas as “attainment” or “nonattainment,” but based on the CAAQS rather than the NAAQS.

Table 1 summarizes SFBAAB’s federal and state attainment designations for each of the criteria pollutants.

Table 1. San Francisco Bay Area Air Basin Attainment Designation

Pollutant	Federal Designation	State Designation
Ozone (O ₃), 1-hour	No NAAQS	Nonattainment
Ozone (O ₃), 8-hour	Nonattainment–marginal	Nonattainment
Nitrogen dioxide (NO ₂)	Unclassifiable/attainment	Attainment
Carbon monoxide (CO)	Attainment/maintenance	Attainment
Sulfur dioxide (SO ₂)	Unclassifiable/attainment	Attainment
Coarse particulate matter (PM ₁₀)	Unclassifiable/attainment	Nonattainment
Fine particulate matter (PM _{2.5})	Nonattainment–moderate	Nonattainment
Lead	Unclassifiable/attainment	Attainment
Hydrogen sulfide	No NAAQS	Unclassified
Sulfates	No NAAQS	Attainment
Visibility-reducing particles	No NAAQS	Unclassified
Vinyl chloride	No NAAQS	No designation

Sources: EPA 2022b (NAAQS); CARB 2020 (CAAQS).

Notes: NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; bold text = not in attainment; attainment = meets the standards; attainment/maintenance = achieves the standards after a nonattainment designation; nonattainment = does not meet the standards; unclassified or unclassifiable = insufficient data to classify; unclassifiable/attainment = meets the standard or is expected to be meet the standard despite a lack of monitoring data.

In summary, the SFBAAB is designated as a nonattainment area for federal and state O₃ and PM_{2.5} standards. The SFBAAB is also designated as a nonattainment area for the state PM₁₀ standards. The SFBAAB is designated as unclassified or in attainment for all other criteria air pollutants.

2.2.2 Air Quality Monitoring Data

CARB, air districts, and other agencies monitor ambient air quality at approximately 250 air quality monitoring stations across the state. BAAQMD monitors local ambient air quality within the SFBAAB, including a Livermore monitoring station that is representative of ambient air quality near the Project Site. Air quality monitoring stations usually measure pollutant concentrations 10 feet above ground level; therefore, air quality is often referred to in terms of ground-level concentrations. The most recent background ambient air quality data from 2020 to 2022 are presented in Table 2. The data collected at this station is considered generally representative of the air quality experienced in the Project vicinity. The number of days exceeding the ambient air quality standards is also shown in Table 2.

Table 2. Local Ambient Air Quality Data

Monitoring Station	Unit	Averaging Time	Agency/ Method	AAQS	Measured Concentration by Year			Exceedances by Year		
					2021	2022	2023	2021	2022	2023
Ozone (O ₃)										
Livermore	ppm	Maximum 1-hour concentration	State	0.09	0.113	0.101	0.088	3	2	0
	ppm	Maximum 8-hour concentration	State	0.070	0.086	0.078	0.076	9	2	2
			Federal	0.070	0.086	0.077	0.075	9	2	1
Nitrogen Dioxide (NO ₂)										
Livermore	ppm	Maximum 1-hour concentration	State	0.18	0.037	0.042	0.035	0	0	0
			Federal	0.100	0.037	0.042	0.035	0	0	0
	ppm	Annual concentration	State	0.030	0.006	0.008	0.006	-	-	-
			Federal	0.053	0.006	0.008	0.006	-	-	-
Carbon Monoxide (CO)										
Pleasanton	ppm	Maximum 1-hour concentration	State	20	1.3	1.2	16.5	0	0	0
			Federal	35	1.3	1.2	16.5	0	0	0
	ppm	Maximum 8-hour concentration	State	9.0	1.0	0.8	3.7	0	0	0
			Federal	9	1.0	0.8	3.7	0	0	0
Coarse Particulate matter (PM ₁₀) ^a										
Concord	µg/ m ³	Maximum 24-hour concentration	State	50	26.0	33.4	39.7	0	0	0
			Federal	150	25.0	33.4	38.8	0	0	0
	µg/ m ³	Annual concentration	State	20	6.4	6.5	6.7	-	-	-
Fine Particulate Matter (PM _{2.5}) ^a										
Livermore	µg/ m ³	Maximum 24-hour concentration	Federal	35	43.5	25.9	43.2	2.0 (2)	0 (0)	1.1 (1)
	µg/ m ³	Annual concentration	State	12	8.0	ND	ND	-	-	-
			Federal	12.0	7.9	7.5	6.4	-	-	-

Sources: CARB 2023d, EPA 2023b.

Notes: ppm = parts per million; — = not available or applicable; µg/m³ = micrograms per cubic meter; ND = insufficient data available to determine the value.

Data taken from CARB iADAM (<http://www.arb.ca.gov/adam>) and EPA AirData (<http://www.epa.gov/airdata/>) represent the highest concentrations experienced over a given year.

Exceedances of federal and state standards are only shown for O₃ and particulate matter. Daily exceedances for particulate matter are estimated days because PM₁₀ and PM_{2.5} are not monitored daily. All other criteria pollutants did not exceed federal or state standards during the years shown. There is no federal standard for 1-hour O₃, annual PM₁₀, or 24-hour SO₂, nor is there a state 24-hour standard for PM_{2.5}.

The Livermore monitoring station is located at 793 Rincon Ave, Livermore, California.

The Concord monitoring station is located at 2956-A Treat Boulevard, Concord.

The Pleasanton monitoring station is located at Owens Ct., Pleasanton, California.

- ^a Measurements of PM₁₀ and PM_{2.5} are usually collected every 6 days and every 1 to 3 days, respectively. Number of days exceeding the standards is a mathematical estimate of the number of days concentrations would have been greater than the level of the standard had each day been monitored.

2.4 Significance Criteria and Methodology

2.4.1 Thresholds of Significance

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.), which provides guidance that a Project would have a significant environmental impact if it would:

1. Conflict with or obstruct implementation of the applicable air quality plan.
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard.
3. Expose sensitive receptors to substantial pollutant concentrations.
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.) indicates that, where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to determine whether a Project would have a significant impact on air quality.

Notably, in the *California Building Industry Association v. Bay Area Air Quality Management District* case decided in 2015, the California Supreme Court held that CEQA does not generally require lead agencies to consider how existing environmental conditions might impact a project's occupants, except where the project would significantly exacerbate an existing environmental condition. Accordingly, the significance criterion above related to exposure of sensitive receptors to substantial pollutant concentrations is relevant only to the extent that the project would exacerbate existing air quality conditions.

While BAAQMD has initiated an update to their CEQA Air Quality Guidelines, the timeline for its release is unknown. Therefore, the BAAQMD CEQA Air Quality Guidelines remain as the applicable guidelines for the Project and include thresholds for criteria air pollutants, TACs, and GHG emissions (BAAQMD 2023). BAAQMD significance thresholds are summarized in Table 3.

Table 3. Air Quality - Thresholds of Significance

Pollutant	Construction Thresholds	Operational Thresholds	
	Average Daily Emissions (Pounds/Day)	Average Daily Emissions (Pounds/Day)	Maximum Annual Emissions (Tons/Year)
ROGs	54	54	10
NO _x	54	54	10
PM ₁₀	82 (exhaust)	82	15
PM _{2.5}	54 (exhaust)	54	10
PM ₁₀ /PM _{2.5} (fugitive dust)	Best management practices	None	
Local CO	None	9.0 ppm (8-hour average), 20.0 ppm (1-hour average)	

Table 3. Air Quality - Thresholds of Significance

Pollutant	Construction Thresholds	Operational Thresholds	
	Average Daily Emissions (Pounds/Day)	Average Daily Emissions (Pounds/Day)	Maximum Annual Emissions (Tons/Year)
Risks and hazards (individual project)	Compliance with qualified community risk reduction plan or Increased cancer risk of >10.0 in a million Increased noncancer risk of >1.0 Hazard Index (chronic or acute) Ambient PM _{2.5} increase >0.3 µg/m ³ annual average Zone of Influence: 1,000-foot radius from property line of source or receptor		
Risks and hazards (cumulative)	Compliance with qualified community risk reduction plan or Cancer risk of >100 in a million (from all local sources) Noncancer risk of >10.0 Hazard Index (chronic, from all local sources) Ambient PM _{2.5} >0.8 µg/m ³ annual average (from all local sources) Zone of Influence: 1,000-foot radius from property line of source or receptor		
Accidental release of acutely hazardous air pollutants	None	Storage or use of acutely hazardous material located near receptors or new receptors located near stored or used acutely hazardous materials considered significant	
Odors	None	Five confirmed complaints to BAAQMD per year averaged over 3 years	

Source: BAAQMD 2023

Notes: ROG = reactive organic gases; NO_x = oxides of nitrogen; PM₁₀ = coarse particulate matter; PM_{2.5} = fine particulate matter; CO = carbon monoxide; ppm = parts per million; µg/m³ = micrograms per cubic meter; BAAQMD = Bay Area Air Quality Management District.

The evaluation of whether the Project would conflict with or obstruct implementation of the applicable air quality plan (14 CCR 15000 et seq., Appendix G, Air Quality Threshold 1) is based on the BAAQMD CEQA Air Quality Guidelines, which identify a three-step methodology for determining a project's consistency with the current Clean Air Plan. The questions associated with these steps are as follows:

1. Does the project support the goals of the Clean Air Plan?
2. Does the project include applicable control measures from the Clean Air Plan?
3. Does the project disrupt or hinder implementation of any control measures from the Clean Air Plan?

The BAAQMD-recommended measure to assess the first question is consistency with BAAQMD thresholds of significance, which is addressed in detail in Section 2.5.2 (see Section 2.5, Impact Analysis). The second criterion is whether the Project would incorporate all feasible air quality plan control measures from the Clean Air Plan, which is discussed in Section 2.5.1. Regarding the third criterion, examples of how a project may cause the disruption or delay of control measures include a project that precludes an extension of a transit line or bike path or proposes excessive parking beyond parking requirements. This is also discussed in Section 2.5.1.

To evaluate the potential for the Project to result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in nonattainment under an applicable federal or state ambient air quality standard (14

CCR 15000 et seq., Appendix G, Air Quality Threshold 2), this analysis applies BAAQMD's construction criteria pollutants average daily thresholds, as shown in Table 3. BAAQMD states that these thresholds are intended to maintain ambient air quality concentrations of these criteria air pollutants below state and federal standards and to prevent a cumulatively considerable contribution to regional nonattainment with ambient air quality standards. A project would potentially result in a cumulatively considerable net increase in O₃, which is a nonattainment pollutant, if the project's construction or operational emissions would exceed the BAAQMD ROG or NO_x thresholds shown in Table 3. These emissions-based thresholds for O₃ precursors are intended to serve as a surrogate for an ozone significance threshold (i.e., the potential for adverse O₃ impacts to occur). This approach is used because O₃ is not emitted directly, and the effects of an individual project's emissions of O₃ precursors (ROGs and NO_x) on O₃ levels in ambient air cannot be determined reliably or meaningfully through air quality models or other quantitative methods.

The assessment of the Project's potential to expose sensitive receptors to substantial pollutant concentrations (14 CCR 15000 et seq., Appendix G, Air Quality Threshold 3) includes an assessment of potential health risk impacts at existing off-site and future on-site sensitive receptors associated with TACs generated by Project construction, as well as cumulative health risk impacts at future on-site residential receptors from all sources of TACs within 1,000 feet of the Project Site boundary. Cancer risk, chronic risk, and PM_{2.5} concentration impact determinations were based on the respective thresholds depicted in Table 3. In addition, localized impacts associated with CO hotspots were also evaluated based on whether the concentration thresholds in Table 3 would be exceeded. According to BAAQMD, a project would result in a less-than-significant impact to localized CO concentrations if the following screening criteria are met (BAAQMD 2023):

1. Project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans.
2. The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
3. The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

Finally, the potential for the Project to result in other emissions, specifically an odor impact (14 CCR 15000 et seq., Appendix G, Air Quality Threshold 4), is based on the Project's land-use types and anticipated construction activity, and the potential for the Project to create an odor nuisance.

2.4.2 Approach and Methodology

2.4.2.1 Construction Mass Emissions

Emissions from the construction phase of Project components were estimated using the California Emissions Estimator Model (CalEEMod) Version 2022.1.1³. Per preliminary Project details, it is conservatively assumed that construction of the Project would begin in February 2027 and would last approximately 18 months, ending in June

³ CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform to calculate construction and operational emissions from land use development Projects. The model was developed for the California Air Pollution Control Officers Association in collaboration with multiple air districts across the state. Numerous lead agencies in the state, including BAAQMD, use CalEEMod to estimate greenhouse gas emissions in accordance with CEQA Guidelines Section 15064.4(a)(1).

2028. The Project is assumed to have a 30-year lifespan, and at the end of operation, will be decommissioned. However, the EMFAC and OFFROAD models in CalEEMod only have emission factors through 2050. As such, the year 2050 was assumed for estimation emissions from the decommissioning phase. The analysis contained herein is based on the following schedule assumptions:

- Site Preparation – 8 Weeks
- Grading – 22 weeks
- BESS Foundations – 16 weeks
- Battery/Container Installation – 20 weeks
- PV Substation Installation – 32 weeks
- PG&E Substation Upgrades – 32 weeks
- Gen-tie foundation and Pole installation – 8 weeks
- Gen-tie stringing and pulling – 2 weeks
- Gen-tie stringing and pulling – 1 month
- Testing and commissioning – 26 weeks
- Decommissioning – 6 months

The construction schedule has been developed based on available information provided by the Project applicant, typical construction practices, and CalEEMod default assumptions. Construction phasing is intended to represent a schedule of anticipated activities for use in estimating potential Project-generated construction emissions. Table 4 provides the construction equipment mix and vehicle trips assumed for estimating Project-generated construction emissions. It is also estimated that 6-acre feet of water would be used during construction. Water would be sourced off-site and would be trucked in. Water trucks were modeled as vendor trucks as shown in the Table 4 below. Additional details regarding construction assumptions are provided in the modeling output, Appendix A.

Table 4 Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Site Preparation	50	10	600	Graders	2	8
				Rubber Tired Loaders	2	8
				Skid Steer Loaders	2	8
				Tractors/Loaders/Backhoes	2	8
Grading	112	76	30,240	Graders	2	8
				Rollers	2	8
				Rubber Tired Loaders	2	8
				Skid Steer Loaders	2	8
				Tractors/Loaders/Backhoes	2	8
	86	10	20	Paving Equipment	2	8

Table 4 Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Battery/Container Foundation				Rollers	2	8
				Cement and Mortar Mixers	2	8
				Bore/Drill Rig	1	8
				Tractors/Loaders/Backhoes	2	8
Battery/Container Installation	310	20	2,636	Cranes	2	8

				Tractors/Loaders/Backhoes	2	8
Testing and Commissioning	52	0	0	Rough Terrain Forklift	1	8
Decommissioning	40	2	2,640	Concrete/Industrial Saws	2	8
				Cranes	2	8

Table 4 Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Haul Truck Trips	Equipment Type	Quantity	Usage Hours
				Rubber Tired Dozers	2	8
				Tractors/Loaders/Backhoes	2	8

Note: See Appendix A for additional details.

The equipment mix assumptions were based on CalEEMod default assumptions based on proposed land use and is meant to represent a reasonably conservative estimate of construction activity. For the analysis, it is generally assumed that heavy construction equipment would be operating at the site for approximately 8 hours per day, 5 days per week. Default assumptions provided in CalEEMod were used to determine worker trips and vendor truck trips for each potential construction phase. The default CalEEMod trip distance for construction vehicles was assumed for all phases except for the Battery/Container installation phase. Default trip distances are a one-way distance of 11.97 miles for worker trips, 7.63 miles for vendor truck trips, and 20 miles for haul truck trips. In the Battery/Container Installation phase, the haul truck trip distance was assumed to be 55 miles, which is the approximate distance from the Project site to the Port of Oakland.

Implementation of the Project would generate criteria air pollutant emissions from entrained dust, off-road equipment, vehicle emissions, and asphalt pavement application. Based on Project specific information, 243,118 cubic yards of material export is expected from the construction of the Project during the grading phase. Entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in PM₁₀ and PM_{2.5} emissions. The Project would be required to comply with PDF-AQ-1 (see Section 1.4, Project Design Features) to control dust emissions generated during the earthmoving activities. Standard construction practices that were assumed to be employed to reduce fugitive dust emissions per PDF-AQ-1 and were quantified in CalEEMod include watering of the active site/unpaved roads twice per day, depending on weather conditions, and limitation of vehicle travel to 15 mph on unpaved roads.

Internal combustion engines used by construction equipment, vendor trucks (i.e., delivery trucks), haul trucks, and worker vehicles would result in emissions of ROG, NO_x, CO, PM₁₀, and PM_{2.5}. The application of architectural coatings, such as exterior application/interior paint and other finishes, and application of asphalt pavement would also produce ROG emissions; however, the contractor is required to procure architectural coatings from a supplier in compliance with the requirements of BAAQMD's Regulation 8, Rule 3 (Architectural Coatings). For additional details see Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

2.4.2.2 Construction Health Risk Analysis

The greatest potential for TAC emissions during Project construction would be DPM emissions from heavy equipment operations and heavy-duty trucks. As a precautionary measure, a construction HRA was performed to assess the impact of construction on sensitive receptors proximate to the Project Site. The construction HRA follows the methodologies prescribed in the Office of Environmental Health Hazard Assessment (OEHHa) document, Air Toxics Hot Spots Program Risk Assessment Guidelines – Guidance Manual for Preparation of Health Risk Assessments (OEHHa

Guidelines) (OEHHA 2015). Cancer risk parameters, such as age-sensitivity factors, daily breathing rates, exposure period, fraction of time at home, and cancer potency factors were based on the values and data recommended by OEHHA are implemented in CARB's Hotspots Analysis and Reporting Program Version 2 (HARP2), which was used to estimate risk from construction activities.

The exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens. DPM has established cancer risk factors and relative exposure values for long-term chronic health hazard impacts. No short-term, acute relative exposure level has been established for DPM; therefore, acute impacts of DPM are not addressed in this assessment.

A dispersion modeling analysis was conducted of DPM emitted from diesel vehicles and construction equipment on the Project Site for the HRA to assess the health risk impacts of the construction on proximate existing off-site. The dispersion modeling was performed using the American Meteorological Society/EPA Regulatory Model (AERMOD), which is the model BAAQMD requires for atmospheric dispersion of emissions. AERMOD is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain. Principal parameters of this modeling are presented in Table 5.

Table 5. Construction HRA AERMOD Principal Parameters

Parameter	Details
Dispersion Model	The air dispersion model used was AERMOD Version 23132, with the Lakes Environmental Software implementation/user interface, AERMOD View, Version 12.0.0. A unit emission rate (1 gram per second [g/s]) was normalized over the line of adjacent volume sources for the AERMOD run to obtain the X/Q values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength. It is used as a way to simplify the representation of emissions from many sources. The maximum concentrations were determined for the 1-hour and PERIOD averaging periods.
Meteorological Data	The latest three-year meteorological data (2013-2016) for the Livermore Station were obtained from BAAQMD as the recommended meteorological station and input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. The rural dispersion option was selected based on the site's rural location.
Terrain Characteristics	The elevation of the modeled site is approximately 125 meters above sea level. Digital elevation model files were imported into AERMOD so that complex terrain features were evaluated as appropriate.
Elevation Data	Digital elevation data were imported into AERMOD, and elevations were assigned to the emission sources and receptors. Digital elevation data were obtained through AERMOD View in the U.S. Geological Survey's National Elevation Dataset format with a 30-meter resolution.
Emission Sources and Release Parameters	Air dispersion modeling of DPM from construction equipment was conducted using emissions estimated using CalEEMod, assuming emissions would occur eight hours per day, five days per week. Vendor and hauling trips were modified to account only for emissions occurring within 0.25 miles of the Project site. The proposed Project area was modeled as a series of adjacent line-volume sources.
Source Release Characterizations	Based on U.S. Environmental Protection Agency methodology, the modeled line volume sources would result in a release height of 5 meters, a plume height of 10 meters, and a plume width of 10 meters for off-road equipment and diesel trucks (EPA 2023).

Table 5. Construction HRA AERMOD Principal Parameters

Parameter	Details
Receptors	Discrete receptors were placed over residences proximate to the Project site.

Notes: AERMOD = American Meteorological Society/EPA Regulatory Model; DPM = diesel particulate matter; CalEEMod = California Emissions Estimator Model.

See Appendix D for additional information.

Dispersion model plot files from AERMOD were then imported into CARB's Hotspots Analysis and Reporting Program (HARP2) Version 2 (Version 22118) to determine health risk, which requires peak one-hour emission rates and annual emission rates for all pollutants for each modeling source. For the construction HRA, the TAC exposure period was assumed to be starting from the third trimester of pregnancy for 1.25 years (15 months) for all receptor locations.

2.4.2.3 Construction Ambient Air Quality Analysis

Dispersion modeling of construction criteria air pollutant emissions from the on-site off road equipment was also performed using AERMOD to determine compliance with the CAAQS and NAAQS. The principal parameters used in AERMOD are shown in Table 6.

Table 6. Construction AAQA AQAERMOD Principal Parameters

Parameter	Details
Dispersion Model	The air dispersion model used was AERMOD Version 23132, with the Lakes Environmental Software implementation/user interface, AERMOD View, Version 12.0.0. A unit emission rate (1 gram per second [g/s]) was normalized over the two adjacent point sources for the AERMOD run to obtain the X/Q values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength. It is used as a way to simplify the representation of emissions from many sources. The maximum concentrations were determined for the 1-hour and PERIOD averaging periods.
Meteorological Data	The latest three-year meteorological data (2013-2016) for the Livermore Station were obtained from BAAQMD as the recommended meteorological station and input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. The rural dispersion option was selected based on the site's rural location.
Terrain Characteristics	The elevation of the modeled site is approximately 125 meters above sea level. Digital elevation model files were imported into AERMOD so that complex terrain features were evaluated as appropriate.

Emission Sources and Release Parameters	Air dispersion modeling of emissions from construction equipment was conducted using emissions estimated using CalEEMod, assuming emissions would occur eight hours per day, five days per week. Vendor and hauling trips were modified to account only for emissions occurring within 0.25 miles of the Project site. The proposed Project area was modeled as a series of adjacent line-volume sources.
Source Release Characterizations	Based on U.S. Environmental Protection Agency methodology, the modeled line volume sources would result in a release height of 5 meters, a plume height of 10 meters, and a plume width of 10 meters for off-road equipment and diesel trucks (EPA 2023).

Table 6. Construction AAQA AQAERMOD Principal Parameters

Parameter	Details
Receptors	A telescoping grid of receptors was generated with the following spacing: 25 meter spacing on the facility boundary; 25 meter spacing from the facility boundary out to 100 meters; 50 meter spacing from 100 meters to 250 meters; 100 meter spacing from 250 meters to 500 meters; 250 meter spacing from 500 meters to 1,000 meters; and 500 meter spacing from 1,000 meters to 2,000 meters.

Notes: AERMOD = American Meteorological Society/EPA Regulatory Model; DPM = diesel particulate matter; CalEEMod = California Emissions Estimator Model.
See Appendix B for additional information.

2.4.2.4 Operation

Operation of the proposed Project would generate ROG, NO_x, CO, SO_x, PM₁₀, and PM_{2.5} emissions from area sources, energy sources mobile sources, offroad and stationary sources, which are discussed below. Emissions from these sources were estimated based on CalEEMod default assumptions for operations of the proposed Project land uses. It was assumed that the Project would be operational following the completion of construction, which would occur in 2028.

Area

The area source category calculates direct sources of air pollutant emissions located at the Project site, including consumer product use and landscape maintenance equipment. CalEEMod defaults were used to estimate emissions from area sources during operation of the Project.

Consumer products are various solvents used in non-industrial applications which emit ROG during their product use, including detergents; cleaning compounds; polishes; floor finishes; cosmetics; personal care products; home, lawn, and garden products; disinfectants; sanitizers; aerosol paints; and automotive specialty products. Consumer product ROG emissions are estimated in CalEEMod based on the floor area of buildings and on the default factor of pounds of ROG per building square foot per day. The CalEEMod default utilization rates and emission factors were assumed.

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chainsaws, and hedge trimmers, as well as air compressors, generators, and pumps. The emissions associated from landscape equipment use were estimated using CalEEMod. The emission factors are multiplied by the number of summer days that represent the number of operational days.

Energy

As represented in CalEEMod, energy sources include emissions associated with building electricity and natural gas usage. Electricity use would contribute indirectly to criteria air pollutant emissions; however, the emissions from electricity use are only quantified for GHGs in CalEEMod, since criteria pollutant emissions occur at the site of the power plant, which is typically off site. The Project does not include the use of natural gas during operation. Therefore, no emissions associated with energy sources were quantified for the air quality analysis. The estimated annual electricity consumption from the Project was provided by the applicant and assumed to be 17,520 megawatt-hours per year.

Mobile Sources

Following the completion of construction activities, the Project would generate criteria pollutant emissions from mobile sources (vehicular traffic) as a result of the periodic maintenance of the Project. The Project was assumed to require up to 20 employees visiting the BESS facility sites 7 days a week for operation and maintenance activities. The estimated trip lengths and trip modes were based on CalEEMod default data. CalEEMod was used to estimate emissions from proposed vehicular sources (refer to Appendix A). CalEEMod default data, including temperature, trip characteristics, variable start information, and emissions factors, were conservatively used for the model inputs. Project-related traffic was assumed to include a mixture of vehicles in accordance with the associated use, as modeled within CalEEMod, which is based on the California Air Resources Board (CARB) EMFAC2021 model. Emission factors representing the vehicle mix and emissions for 2028 were used to estimate emissions associated with vehicular sources.

Off-Road Sources

During irregular maintenance, the Project may require the movement or replacement of battery enclosures during the lifetime of the Project. As such, the use of 1 crane and 1 forklift were assumed to assist the lifting and movement of the BESS containers. CalEEMod was used to estimate criteria air pollutant emissions of the crane and forklift assuming 4 hours of operation on 2 days during a maintenance year.

Stationary Sources

The Project will install two emergency Diesel generators (4,360 horsepower) for emergency safety systems during a power outage that lasts longer than 24-48 hours. This 24-hour window would provide operations personnel enough time to safely de-energize and isolate equipment during operation. CalEEMod was used to estimate criteria air pollutant emissions of the generator assuming 2 hour per day and 400 hours per year for maintenance and testing per BAAQMD guidance. For additional details see Appendix A, Air Quality and Greenhouse Gas Emissions CalEEMod Output Files.

2.4.2.5 Operational Health Risk Analysis

The greatest potential for TAC emissions during Project operation would be DPM emissions from the testing and maintenance associated with the projects two emergency generators. As a precautionary measure, an operational HRA was performed to assess the impact of operation on sensitive receptors proximate to the Project Site. The operational HRA follows the methodologies prescribed in the Office of Environmental Health Hazard Assessment (OEHHA) document, Air Toxics Hot Spots Program Risk Assessment Guidelines – Guidance Manual for Preparation of Health Risk Assessments (OEHHA Guidelines) (OEHHA 2015). Cancer risk parameters, such as age-sensitivity factors, daily breathing rates, exposure period, fraction of time at home, and cancer potency factors were based on the values and data recommended by OEHHA are implemented in CARB's HARP2, which was used to estimate risk from operational activities.

The exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens. DPM has established cancer risk factors and relative exposure values for long-term chronic health hazard impacts. No short-term, acute relative exposure level has been established for DPM; therefore, acute impacts of DPM are not addressed in this assessment.

A dispersion modeling analysis was conducted of DPM emitted from the emergency generators for the HRA to assess the health risk impacts of operation on off-site receptors. The dispersion modeling was performed using the AERMOD, which is the model BAAQMD requires for atmospheric dispersion of emissions. Principal parameters of this modeling are presented in Table 7.

Table 7. Operational HRA AERMOD Principal Parameters

Parameter	Details
Dispersion Model	The air dispersion model used was AERMOD Version 23132, with the Lakes Environmental Software implementation/user interface, AERMOD View, Version 12.0.0. A unit emission rate (1 gram per second [g/s]) was normalized over the two adjacent point sources for the AERMOD run to obtain the X/Q values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength. It is used as a way to simplify the representation of emissions from many sources. The maximum concentrations were determined for the 1-hour and PERIOD averaging periods.
Meteorological Data	The latest three-year meteorological data (2013-2016) for the Livermore Station were obtained from BAAQMD as the recommended meteorological station and input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. The rural dispersion option was selected based on the site's rural location.
Terrain Characteristics	The elevation of the modeled site is approximately 125 meters above sea level. Digital elevation model files were imported into AERMOD so that complex terrain features were evaluated as appropriate.
Elevation Data	Digital elevation data were imported into AERMOD, and elevations were assigned to the emission sources and receptors. Digital elevation data were obtained through AERMOD View in the U.S. Geological Survey's National Elevation Dataset format with a 30-meter resolution.
Emission Sources and Release Parameters	Air dispersion modeling of DPM from the emergency generators was conducted using emissions estimated using the CalEEMod. The maximum daily emissions were used in the screening assessment. The emergency generators were modeled as point sources
Source Release Characterizations	The following source parameters were assumed: Generator 1, release height 16.5 feet, exit temperature 966.2°F, stack diameter of 2.3 feet, and gas exit flow rate of 24,791 cubic feet per minute (CFM); and Generator 2, release height 16.5 feet, exit temperature 966.2°F, stack diameter of 2.3 feet, and gas exit flow rate of 24,791 CFM.
Receptors	Discrete receptors were placed over residences and workplaces proximate to the Project site.

Notes: AERMOD = American Meteorological Society/EPA Regulatory Model; DPM = diesel particulate matter; CalEEMod = California Emissions Estimator Model.

See Appendix E for additional information.

Dispersion model plot files from AERMOD were then imported into HARP2 (Version 22118) to determine health risk, which requires peak one-hour emission rates and annual emission rates for all pollutants for each modeling source. For the operational HRA, the TAC exposure period was assumed to be starting from the third trimester of pregnancy for 30 years for all receptor locations.

In addition to evaluating the potential project's incremental contribution to cancer and non-cancer health risk impacts, a cumulative health risk assessment was performed to include other stationary sources of TACs within 6 miles of the project site. The BAAQMD Stationary Source Screening Map was used to identify and download cancer risk, chronic

hazard index, and PM_{2.5} concentrations from permitted stationary sources of TAC's within 6 miles of the project site (BAAQMD 2024). In accordance with BAAQMD guidance, the values obtained from the BAAQMD Stationary Source Screening Map must be adjusted based on the distance from the source to the receptor using the BAAQMD Health Risk Calculator with Distance Multipliers tool (BAAQMD 2022). The distance multiplier tool only has values out to 1,000 feet from the source. In consultation with the BAAQMD, an exponential trendline was fitted to the values in the BAAQMD Health Risk Calculator with Distance Multipliers tool and used to determine multipliers for distances up to 6 miles from the project site (Lau, pers. Comm., 2024). As applicable, these extrapolated multipliers were used with the results of the facilities within 6 miles of the project site. The BAAQMD Health Risk Calculator with Distance Multipliers tool does not apply to gasoline dispensing facilities and thus no distance multiplier was used.

2.4.2.6 Operational Air Quality Analysis

Dispersion modeling of operational criteria air pollutant emissions from the two on-site diesel emergency generators was also performed using AERMOD to determine compliance with the CAAQS and NAAQS. The principal parameters used in AERMOD are shown in Table 8.

Table 8. Operational AAQA AERMOD Principal Parameters

Parameter	Details
Dispersion Model	The air dispersion model used was AERMOD Version 23132. A unit emission rate (1 gram per second [g/s]) was normalized over the two adjacent point sources for the AERMOD run to obtain the X/Q values. X/Q is a dispersion factor that is the average effluent concentration normalized by source strength. It is used as a way to simplify the representation of emissions from many sources. The maximum concentrations were determined for the 1-hour, 3-hour, 8-hour, 24-hour, and Annual averaging periods.
Meteorological Data	The latest three-years of meteorological data (2013-2016) for the Livermore Station were obtained from BAAQMD as the recommended meteorological station and input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. However, based on the Auer method for classifying a site as urban or rural as specified in US EPA's 40 CFR Part 51, Appendix W, the rural dispersion option was selected.
Terrain Characteristics	The elevation of the modeled site is approximately 125 meters above sea level. Digital elevation model files were imported into AERMOD so that complex terrain features were evaluated as appropriate.
Elevation Data	Digital elevation data were imported into AERMOD, and elevations were assigned to the emission sources and receptors. Digital elevation data were obtained through AERMOD View in the U.S. Geological Survey's National Elevation Dataset format with a 30-meter resolution.
Emission Sources and Release Parameters	Air dispersion modeling of criteria air pollutant emissions from the emergency generators was conducted using emissions estimated using the CalEEMod. The maximum daily emissions were used in the screening assessment. The emergency generators were modeled as point sources.
Source Release Characterizations	The following source parameters were assumed: Generator 1, release height 16.5 feet, exit temperature 966.2°F, stack diameter of 2.3 feet, and gas exit flow rate of 24,791 cubic feet per minute (CFM); and Generator 2, release height 16.5 feet, exit temperature 966.2°F, stack diameter of 2.3 feet, and gas exit flow rate of 24,791 CFM.

Table 8. Operational AAQA AERMOD Principal Parameters

Parameter	Details
Receptors	A telescoping grid of receptors was generated with the following spacing: 25 meter spacing on the facility boundary; 25 meter spacing from the facility boundary out to 100 meters; 50 meter spacing from 100 meters to 250 meters; 100 meter spacing from 250 meters to 500 meters; 250 meter spacing from 500 meters to 1,000 meters; and 500 meter spacing from 1,000 meters to 2,000 meters.

Notes: AERMOD = American Meteorological Society/EPA Regulatory Model; CalEEMod = California Emissions Estimator Model. See Appendix C for additional information.

2.5 Impact Analysis

2.5.1 Would the Project conflict with or obstruct implementation of the applicable air quality plan?

An area is designated as in attainment when it complies with the federal and/or state standards. These standards are set by EPA or CARB for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or public welfare, with a margin of safety. The Project Site is located within the SFBAAB, which is designated as nonattainment for the federal 8-hour O₃ and 24-hour PM_{2.5} standards. The area is in attainment or unclassified for all other federal standards. The area is designated as nonattainment for state standards for 1-hour and 8-hour O₃, 24-hour PM₁₀, annual PM₁₀, and annual PM_{2.5}.

On April 19, 2017, BAAQMD adopted its 2017 Clean Air Plan (BAAQMD 2017b). The BAAQMD CEQA Air Quality Guidelines identify a three-step methodology for determining a project's consistency with the current Clean Air Plan. If the responses to these three questions can be concluded in the affirmative and those conclusions are supported by substantial evidence, then the BAAQMD considers the project to be consistent with air quality plans prepared for the Bay Area. The three questions are as follows:

1. Does the project support the goals of the Clean Air Plan?
2. Does the project include applicable control measures from the Clean Air Plan?
3. Does the project disrupt or hinder implementation of any control measures from the Clean Air Plan?

The first question to be assessed in this methodology is “does the project support the goals of the Clean Air Plan”? The BAAQMD-recommended measure for determining project support for these goals is consistency with BAAQMD thresholds of significance. If a project would not result in significant and unavoidable air quality impacts, after the application of all feasible mitigation measures the project would be consistent with the goals of the 2017 Clean Air Plan. As indicated in Section 2.5.2, the Project would result in a less than significant impact associated with emissions of criteria air pollutant emissions during construction and operation. Therefore, the Project would be considered to support the primary goals and be consistent with BAAQMD's current Clean Air Plan.

The second question to be assessed is “does the project include applicable control measures from the Clean Air Plan?” The 2017 Clean Air Plan contains 85 control measures aimed at reducing air pollution in the Bay Area. Projects that incorporate all feasible air quality plan control measures are considered consistent with the Clean Air Plan. The control strategies of the 2017 Clean Air Plan include measures in the categories of stationary sources, the transportation sector, the buildings sector, the energy sector, the agriculture sector, natural and working lands,

the waste sector, the water sector, and super-GHG measures. Depending on the control measure, the tools for implementation include leveraging the BAAQMD rules and permitting authority, regional coordination and funding, working with local governments to facilitate best policies in building codes, outreach and education, and advocacy strategies. The Project site is designated Large Parcel Acreage (LPA) in the Alameda County East County Plan Area. The zone classification is Agriculture-Combining B District (A-BE). The proposed battery energy storage project would be allowed within the County's conditional uses for these zoning and land use designations. Furthermore, the proposed Project would undergo decommissioning at the end of its useful life and the project site would be returned to its current state. The Project would result in the development of uses and growth that are consistent with the City General Plan and zoning designations. Furthermore, because the Project would comply with all applicable BAAQMD rules and would meet or exceed state and federal standards and/or local building codes, the Project would not conflict with any applicable control measures from the 2017 Clean Air Plan.

The third question to be assessed in this consistency methodology is "does the project disrupt or hinder implementation of any control measures from the Clean Air Plan?" Examples of how a project may cause the disruption or delay of control measures include a project that precludes an extension of a transit line or bike path or proposes excessive parking beyond parking requirements. The Project would not create any barriers or impediments to planned or future improvements to transit or bicycle facilities in the area, nor would it include excessive parking. Therefore, the project would not hinder implementation of 2017 Clean Air Plan control measures. Therefore, the Project would not conflict with or obstruct the implementation of the 2017 Clean Air Plan, and impacts would be less than significant.

2.5.2 Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?

Past, present, and future development projects may contribute to the SFBAAB adverse air quality impacts on a cumulative basis. Per BAAQMD's CEQA Air Quality Guidelines, by its nature air pollution is largely a cumulative impact; no single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. In developing thresholds of significance for air pollutants, BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be considered cumulatively considerable, resulting in a significant adverse air quality impact to the region's existing air quality conditions. Therefore, if the Project's emissions are below the BAAQMD thresholds or screening criteria, then the Project would not result in a cumulatively considerable net increase of any criteria air pollutant.

2.5.2.1 Construction

Construction of the proposed Project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and ROG off-gassing) and off-site sources (vendor and haul truck trips, and worker vehicle trips). Construction emissions can vary substantially day to day, depending on the level of activity, the specific type of operation, and for dust, the prevailing weather conditions.

Criteria air pollutant emissions associated with construction activities were quantified using CalEEMod. Default values provided by the program were used where detailed proposed Project information was not available. A

detailed depiction of the construction schedule—including information regarding phasing, equipment used during each phase, haul trucks, vendor trucks, and worker vehicles—is included in Section 2.4.2. above.

Development of the proposed Project would generate air pollutant emissions from entrained dust, off-road equipment, vehicle emissions, and asphalt pavement application. As described previously, fugitive dust would be limited through compliance with BAAQMD Rules 6-1 Particulate Matter-General Requirements, Rule 6-6 Particulate Matter – Prohibition of Track out and PDF-AQ-1

Table 9 shows the estimated maximum unmitigated daily construction emissions associated with the conceptual construction years of the Project. Emissions represent maximum of summer and winter. “Summer” emissions are representative of the conditions that may occur during the O₃ season (May 1 to October 31), and “winter” emissions are representative of the conditions that may occur during the balance of the year (November 1 to April 30). Complete details of the emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

Table 9. Estimated Average Daily Construction Criteria Air Pollutant Emissions

	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Year	Pounds per Day					
2027	3.17	30.16	36.83	0.10	4.44	1.71
2028	124	10.88	15.25	0.03	0.37	0.31
2050	0.67	4.04	6.54	0.02	0.78	0.44
Maximum	3.17	30.16	36.83	0.10	4.44	1.71
<i>BAAQMD Thresholds</i>	54	54	NA	NA	82	54
Threshold exceeded?	No	No	No	No	No	No

Notes: ROG = reactive organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM₁₀ = coarse particulate matter; PM_{2.5} = fine particulate matter; BAAQMD = Bay Area Air Quality Management District.

See Appendix A for complete results.

The values shown are the maximum summer and winter daily emissions results from CalEEMod.

As shown in Table 9, daily construction emissions for the Project would not exceed BAAQMD’s significance thresholds for criteria air pollutants during construction with incorporation of PDF-AQ-1. Therefore, the Project would have a less-than-significant impact related to criteria air pollutant emissions during construction and would not require mitigation.

Construction Ambient Air Quality Analysis

The screening analysis consists of evaluating modeled Project emissions against the significant impact levels (SILs) established by the EPA to determine if a project’s criteria air pollutant emissions are considered inconsequential in comparison to the NAAQS. If the SILs are not exceeded, then a project’s impacts would be considered insignificant, and no further analysis would be required. For completeness, this analysis also evaluates Project emissions to the CAAQS and NAAQS. Modeled concentrations are compared to the SILs in Table 10. All maximum facility impacts occurred at the ambient boundary, and the estimated concentrations are all below the applicable SILs.

Table 10. Construction Air Quality Impact Results - Significant Impact Levels - Unmitigated

Pollutant	Averaging Time	Maximum Concentration (µg/m³)	Class II SIL (µg/m³)
Nitrogen dioxide (NO ₂)	1 hour	248.89	—
	Annual	53.50	1
Carbon monoxide (CO)	1 hour	397.76	2,000
	8 hours	227.69	500
Sulfur dioxide (SO ₂)	1 hour	0.67	7.86
	24 hours	0.24	5
Course Particulate Matter (PM ₁₀)	24 hours	4.15	5
	Annual	1.95	1
Fine Particulate Matter (PM _{2.5})	24 hours	3.70	1.2
	Annual	1.74	0.3

Notes: CAAQS are not listed because the SIL does not apply to CAAQS. µg/m³ = micrograms per cubic meter; SIL = Significant Impact Level.

As shown in Table 10, the maximum concentrations related by the project would not exceed the SILs established by the EPA for CO, and SO₂. However, the SIL for NO_x PM₁₀ and PM_{2.5} would exceed during construction for the annual averaging and PM_{2.5} SIL would be exceeded for the 24-hour averaging. Because the SIL was exceed for NO_x PM₁₀ and PM_{2.5} maximum combined concentrations (modeled + background) are evaluated in Table 11.

Table 11. Construction Air Quality Impact Results - Ambient Air Quality Standards - Unmitigated

Pollutant	Averaging Time	Maximum Concentration (µg/m³)	Background Concentration (µg/m³)	Total Concentration (µg/m³)	Ambient Air Quality Standard (µg/m³)	
					CAAQS	NAAQS
Nitrogen dioxide (NO ₂)	1 hour	248.89	85	334	339	N/A
	1 hour	248.89	79	328	N/A	188
	Annual	53.50	15	69	57	100
Carbon monoxide (CO)	1 hour	397.76	18,902	19,300	23,000	40,000
	8 hours	227.69	4,239	4,466	10,300	10,300
Sulfur dioxide (SO ₂) ^a	1 hour	0.67	40	41	655	N/A
	24 hours	0.24	7	7	105	N/A
Course Particulate Matter (PM ₁₀)	24 hours	4.15	40	44	50	150
	Annual	1.95	10	12	20	N/A
Fine Particulate Matter (PM _{2.5})	24 hours	3.70	44	47	—	35
	Annual	1.74	8	10	12	12

Notes: µg/m³ = micrograms per cubic meter; CAAQS = California Ambient Air Quality Standards; NAAQS = National Ambient Air Quality Standards; PM₁₀ = particulate matter less than 10 microns; PM_{2.5} = particulate matter less than 2.5 microns; N/A = not applicable or available.

^a Results for SO₂ and CO are reported as the H1H even though the NAAQS allows other forms of compliance. Using the H1H is a more conservative approach.

As shown in Table 11, the proposed Project would exceed the CAAQS for NAAQS after accounting for background concentrations for all criteria air pollutants except for the 1-hour and annual NO₂ and 24-hour PM_{2.5} NAAQS. Therefore, criteria air pollutant emissions would be potentially significant and thus mitigation is required. Mitigation required to minimize potentially significant air quality impacts during construction of the Project include the following:

MM-AQ-1 Require Use of Tier 4 Off-Road Equipment During Construction.

Prior to the commencement of construction activities for the Project, the Applicant shall require its construction contractor to demonstrate that all 50-horsepower or greater diesel-powered equipment is powered with California Air Resources Board (CARB)-certified Tier 4 Final engines.

An exemption from this requirement may be granted if (1) the Applicant documents equipment with Tier 4 Final engines are not reasonably available, and (2) the required corresponding reductions in criteria air pollutant emissions can be achieved for the Project from other combinations of construction equipment. Before an exemption may be granted, the Applicant's construction contractor shall: (1) demonstrate that at least two construction fleet owners/operators in the County of Alameda were contacted and that those owners/operators confirmed Tier 4 Final equipment could not be located within the County of Alameda during the desired construction schedule; and (2) the proposed replacement equipment has been evaluated using California Emissions Estimator Model (CalEEMod) or other industry standard emission estimation method and documentation provided to the County of Alameda to confirm that necessary Project-generated emissions reductions are achieved.

Table 12 summarizes the results of the construction AAQA after implementation of **MM-AQ-1**.

Table 12. Construction Air Quality Impact Results - Significant Impact Levels - Mitigated

Pollutant	Averaging Time	Maximum Concentration (µg/m ³)	Class II SIL (µg/m ³)
Nitrogen dioxide (NO ₂)	1 hour	90.82	—
	Annual	19.52	1
Carbon monoxide (CO)	1 hour	457.77	2,000
	8 hours	262.04	500
Sulfur dioxide (SO ₂)	1 hour	0.67	7.86
	24 hours	0.24	5
Course Particulate Matter (PM ₁₀)	24 hours	1.15	5
	Annual	0.54	1
Fine Particulate Matter (PM _{2.5})	24 hours	0.85	1.2
	Annual	0.40	0.3

Notes: CAAQS are not listed because the SIL does not apply to CAAQS. µg/m³ = micrograms per cubic meter; SIL = Significant Impact Level.

As shown in Table 12, the maximum mitigated concentrations related by the project would not exceed the SILs established by the EPA for CO, SO₂, and PM₁₀. However, the SIL for NO_x and PM_{2.5} would exceed during construction

for the annual averaging. Because the SIL was exceed for NO_x and PM_{2.5} maximum combined concentrations (modeled + background) are evaluated in Table 13.

Table 13. Construction Air Quality Impact Results - Ambient Air Quality Standards - Mitigated

Pollutant	Averaging Time	Maximum Concentration (µg/m³)	Background Concentration (µg/m³)	Total Concentration (µg/m³)	Ambient Air Quality Standard (µg/m³)	
					CAAQS	NAAQS
Nitrogen dioxide (NO ₂)	1 hour	90.94	85	176	339	N/A
	1 hour	90.94	79	179	N/A	188
	Annual	19.55	15	35	57	100
Carbon monoxide (CO)	1 hour	457.77	18,902	19,360	23,000	40,000
	8 hours	262.04	4,239	4,501	10,300	10,300
Sulfur dioxide (SO ₂) ^a	1 hour	0.67	40	41	655	N/A
	24 hours	7	0.24	7	105	N/A
Course Particulate Matter (PM ₁₀)	24 hours	1.15	40	41	50	150
	Annual	0.54	10	10	20	N/A
Fine Particulate Matter (PM _{2.5})	24 hours	0.85	44	35	—	35
	Annual	0.40	8	8	12	12

Notes: µg/m³ = micrograms per cubic meter; CAAQS = California Ambient Air Quality Standards; NAAQS = National Ambient Air Quality Standards; PM₁₀ = particulate matter less than 10 microns; PM_{2.5} = particulate matter less than 2.5 microns; N/A = not applicable or available.

^a Results for SO₂ and CO are reported as the H1H even though the NAAQS allows other forms of compliance. Using the H1H is a more conservative approach.

As shown in Table 13, the proposed Project would not exceed the CAAQS for NAAQS after accounting for background concentrations for all criteria air pollutants except for the 24-hour PM_{2.5} NAAQS. The exceedances for 24-hour PM_{2.5} is due to the high level of background concentrations that already exceed the NAAQS. As shown in Table 12, the Project would not exceed the SIL for the 24-hour PM_{2.5} after mitigation. Additionally, these emissions would be temporary and short-term construction-related emissions. Therefore, impacts would be **less than significant after mitigation**.

2.5.2.2 Operations

Operation of the proposed Project would generate ROG, NO_x, CO, SO_x, PM₁₀, and PM_{2.5} emissions from mobile sources (vehicle trips), area sources), energy sources, off-road equipment, and stationary sources. As discussed in Section 2.4.2.3, pollutant emissions associated with long-term operations were quantified using CalEEMod. Project-generated mobile source emissions were estimated in CalEEMod based on Project-specific trip rates. CalEEMod default values were used to estimate emissions from the proposed Project source. CalEEMod was also used to estimate emissions of the off-road equipment and the stationary source based on hours of operation.

Table 14 presents the maximum daily emissions associated with the operation of the Project in 2028 after all phases of construction have been completed. Emissions represent the average daily emissions over the length of

construction. Complete details of the emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

Table 14. Estimated Average Daily Operational Criteria Air Pollutant Emissions

Source	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
	Pounds per Day					
Mobile	0.14	0.12	0.13	<0.01	0.35	0.09
Area	0.37	<0.01	0.02	<0.01	<0.01	<0.01
Energy	0.00	0.00	0.00	0.00	0.00	0.00
Off-Road	0.02	0.20	0.30	<0.01	<0.01	<0.01
Stationary	21.48	1.05	54.78	0.10	0.42	0.42
Total	21.99	1.39	56.24	0.11	0.78	0.52
BAAQMD Operational Thresholds	54	54	NA	NA	82	54
Threshold exceeded?	No	No	NA	NA	No	No

Notes: ROG = reactive organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM₁₀ = coarse particulate matter; PM_{2.5} = fine particulate matter; BAAQMD = Bay Area Air Quality Management District. <0.01 = reported value is less than 0.01.

See Appendix A for complete results.

Columns may not add due to rounding.

As shown in Table 14, daily operational emissions for the Project would not exceed BAAQMD's significance thresholds for any criteria air pollutant. Therefore, the Project would result in a less-than-significant impact related to emissions of criteria air pollutant emissions during operation.

In analyzing cumulative impacts from a Project, the analysis must specifically evaluate the Project's contribution to the cumulative increase in pollutants for which the basin is designated as nonattainment for the CAAQS and NAAQS. If the Project does not exceed thresholds and is determined to have less than significant Project-specific impacts, it may still contribute to a significant cumulative impact on air quality if the emissions from the Project components, in combination with the emissions from other proposed or reasonably foreseeable future Projects, are in excess of established thresholds. However, the Project would only be considered to have a significant cumulative impact if it represents a "cumulatively considerable contribution" to the cumulative air quality impact.

Operational Ambient Air Quality Analysis

The screening analysis consists of evaluating modeled Project operational emissions against the significant impact levels (SILs) established by the EPA to determine if a project's criteria air pollutant emissions are considered inconsequential in comparison to the NAAQS. If the SILs are not exceeded, then a project's impacts would be considered insignificant, and no further analysis would be required. For completeness, this analysis also evaluates Project operational emissions to the CAAQS and NAAQS. Modeled concentrations are compared to the SILs in Table 15. All maximum facility impacts occurred at the ambient boundary, and the estimated concentrations are all below the applicable SILs.

Table 15. Operational Air Quality Impact Results - Significant Impact Levels

Pollutant	Averaging Time	Maximum Concentration (µg/m³)	Class II SIL (µg/m³)
Nitrogen dioxide (NO ₂)	1 hour	4.69	—
	Annual	0.12	1
Carbon monoxide (CO)	1 hour	57.42	2,000
	8 hours	28.15	500
Sulfur dioxide (SO ₂)	1 hour	0.11	7.86
	24 hours	0.02	5
Course Particulate Matter (PM ₁₀)	24 hours	0.11	5
	Annual	0.01	1
Fine Particulate Matter (PM _{2.5})	24 hours	0.10	1.2
	Annual	0.01	0.3

Notes: CAAQS are not listed because the SIL does not apply to CAAQS. µg/m³ = micrograms per cubic meter; SIL = Significant Impact Level.

As shown in Table 15, the maximum concentrations related by the Project would not exceed the SILs established by the EPA for NO_x, CO, SO₂, PM₁₀, and PM_{2.5}.

Table 16 Operational Air Quality Impact Results - Ambient Air Quality Standards

Pollutant	Averaging Time	Maximum Concentration (µg/m³)	Background Concentration (µg/m³)	Total Concentration (µg/m³)	Ambient Air Quality Standard (µg/m³)	
					CAAQS	NAAQS
Nitrogen dioxide (NO ₂)	1 hour	4.69	85	89	339	N/A
	1 hour	4.69	79	84	N/A	188
	Annual	0.12	15	15	57	100
Carbon monoxide (CO)	1 hour	57.42	18,902	18,960	23,000	40,000
	8 hours	28.15	4,239	4,267	10,000	10,000
Sulfur dioxide (SO ₂) ^a	1 hour	0.11	40	40	655	N/A
	24 hours	0.02	7	7	105	N/A
Course Particulate Matter (PM ₁₀)	24 hours	0.11	40	40	50	N/A
	Annual	0.01	10	10	20	N/A
Fine Particulate Matter (PM _{2.5})	24 hours	0.10	44	44	—	35
	Annual	0.01	8	8	12	12

Notes: µg/m³ = micrograms per cubic meter; CAAQS = California Ambient Air Quality Standards; NAAQS = National Ambient Air Quality Standards; PM₁₀ = particulate matter less than 10 microns; PM_{2.5} = particulate matter less than 2.5 microns; N/A = not applicable or available.

^a Results for SO₂ and CO are reported as the H1H even though the NAAQS allows other forms of compliance. Using the H1H is a more conservative approach.

As shown in Table 16, the proposed Project would not exceed the CAAQS for NAAQS after accounting for background concentrations for all criteria air pollutants except for PM_{2.5} NAAQS. The exceedance for PM_{2.5} is due to the high level of background concentrations that already exceed the NAAQS. As shown in Table 15, the Project would not exceed the SIL for the PM_{2.5} 24-hour concentration. Therefore, impacts would be **less than significant**.

Cumulative Impact Analysis

The SFBAAB the 2017 Clean Air Plan serves as the long-term regional air quality planning document for the purpose of assessing cumulative operational emissions within the basin to ensure the SFBAAB continues to make progress toward NAAQS and CAAQS attainment status. As such, cumulative projects located in the bay area would have the potential to result in a cumulative impact to air quality if, in combination, they would conflict with or obstruct implementation of the 2017 Clean Air Plan. Similarly, individual projects that are inconsistent with the regional planning documents on which the 2017 Clean Air Plan is based would have the potential to result in cumulative impacts if they represent development beyond regional projections.

The SFBAAB has been designated as a national nonattainment area for O₃ and PM_{2.5}, and a California nonattainment area for O₃, PM₁₀, and PM_{2.5}. The geographic extent for the analysis of cumulative impacts related to criteria air pollutants is the SFBAAB. Due to the O₃, PM₁₀, and PM_{2.5} nonattainment status of the SFBAAB, the primary air pollutants of concern are ROG and NO_x, which are O₃ precursors, and PM₁₀ and PM_{2.5}. Because of the nature of O₃ as a regional air pollutant, emissions from the entire geographic area for this cumulative impact analysis would tend to be important, although maximum O₃ impacts generally occur downwind of the area where the O₃ precursors are released. PM₁₀ and PM_{2.5} impacts, on the other hand, tend to occur locally. The nonattainment status is the result of cumulative emissions from all sources of these air pollutants and their precursors within the SFBAAB. As shown in Table 9, the emissions of all criteria pollutants from the Project's construction would be below the significance threshold identified by the BAAQMD.

Construction schedules for potential future projects near the Project site are currently unknown; therefore, potential construction impacts associated with two or more simultaneous projects would be speculative.⁴ However, future projects would be subject to CEQA and would require an air quality analysis and, where necessary, mitigation if the project would exceed BAAQMD's significance thresholds. Criteria air pollutant emissions associated with construction activity of future proposed projects would be reduced through implementation of control measures required by BAAQMD. Cumulative PM₁₀ and PM_{2.5} emissions would be reduced because the Project will incorporate PDF-AQ-1 to reduce fugitive dust emissions and MM-AQ-1 to reduce diesel PM emissions. Therefore, the Project's construction activities are not anticipated to result in a cumulatively significant impact on air quality.

Once construction is completed, construction-related emissions would cease. As shown in Table 14, operational emissions generated by the Project would not result in emissions that exceed significance thresholds for any criteria air pollutant and would be substantially less than construction impacts. Regarding long-term cumulative operational emissions in relation to consistency with local air quality plans, the 2017 Clean Air Plan serves as the primary air quality planning documents for the state and SFBAAB, respectively. The 2017 Clean Air Plan relies on MTC growth projections based on population, vehicle trends, and land use plans developed by the cities and by the County as part of the development of their general plans. Therefore, projects that propose development that is consistent with the growth anticipated by local plans would be consistent with the 2017 Clean Air Plan and would not be considered to result in cumulatively considerable impacts from operational emissions.

⁴ The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145). This discussion is nonetheless provided in an effort to show good-faith analysis and to comply with CEQA's information disclosure requirements.

As a result, the Project would not result in a cumulatively considerable contribution to regional O₃ concentrations or other criteria pollutant emissions. Cumulative impacts for construction and operation would be less than significant for the Project.

2.5.3 Would the Project expose sensitive receptors to substantial pollutant concentrations?

2.5.3.1 Carbon Monoxide Hotspots

Mobile source impacts occur on two scales of motion. Regionally, project-related travel would add to regional trip generation and increase the VMT within the local airshed and the SFBAAB. Locally, project generated traffic would be added to the County's roadway system near the Project Site. If such traffic occurs during periods of poor atmospheric ventilation, is composed of a large number of vehicles cold started and operating at pollution-inefficient speeds and is operating on roadways already crowded with non-project traffic, there is a potential for the formation of microscale CO hotspots in the area immediately around points of congested traffic. Because of continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SFBAAB is steadily decreasing.

The BAAQMD thresholds of significance for local CO emissions are the 1-hour and 8-hour CAAQS of 20 ppm and 9 ppm, respectively. By definition, these represent levels that are protective of public health. According to BAAQMD, a project would result in a less-than-significant impact to localized CO concentrations if the following screening criteria are met (BAAQMD 2023):

1. Project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans.
2. The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
3. The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

The maximum estimated peak-hour traffic of 194 vehicles would be at the Midway Road East and Patterson Pass Road intersection assessed in the draft traffic study for the Project (Dudek 2024). This hourly volume would be substantially less than the BAAQMD screening criteria. Accordingly, Project-related traffic would not exceed CO standards; therefore, no further analysis was conducted for CO impacts. Thus, the CO emissions impact would be considered **less than significant** on a project level and cumulative basis.

2.5.3.2 Toxic Air Contaminants

Construction HRA

As discussed in Section 2.4.2.5, an HRA was performed to estimate the Maximum Individual Cancer Risk and Chronic Hazard Index for residential receptors associated with Project operations. Results of the operational HRA are presented in Table 17. Detailed operational model outputs are presented in Appendix D.

Table 17. Construction Activity Health Risk Assessment Results Prior to Mitigation

Impact Parameter	Units	Project Impact	BAAQMD CEQA Threshold	Level of Significance
Cancer Risk	Per Million	37.26	10.0	Potentially Significant
HIC	Not Applicable	0.03	1.0	Less than Significant
PM _{2.5}	µg/m ³	0.072	0.3	Less than significant

Source: Appendix D

Notes: BAAQMD = Bay Area Air Quality Management District; CEQA = California Environmental Quality Act; HIC = Chronic Hazard Index; PM_{2.5} = fine particulate matter; µg/m³ = micrograms per cubic meter.

The results of the HRA demonstrate that the TAC exposure from construction diesel exhaust emissions would result in cancer risk above the 10 in 1 million threshold and Chronic Hazard Index less than 1. Therefore, TAC emissions from construction of the Project would result in a potentially significant impact and thus mitigation is required. Mitigation required to minimize potentially significant air quality impacts during construction of the Project include **MM-AQ-1**, which is discussed in Section 2.5.2.1.

Table 18 summarizes the results of the construction HRA after implementation of **MM-AQ-1** for construction of the proposed Project.

Table 18. Construction Activity Health Risk Assessment Results After Mitigation

Impact Parameter	Units	Project Impact	BAAQMD CEQA Threshold	Level of Significance
Offsite				
Cancer Risk	Per Million	2.43	10.0	Less than Significant with mitigation
HIC	Not Applicable	0.01	1.0	Less than Significant
PM _{2.5}	µg/m ³	0.05	0.3	Less than significant

Source: Appendix D

Notes: BAAQMD = Bay Area Air Quality Management District; CEQA = California Environmental Quality Act; HIC = Chronic Hazard Index. PM_{2.5} = fine particulate matter; µg/m³ = micrograms per cubic meter.

As shown in Table 18, after mitigation, TAC exposure from construction diesel exhaust emissions would result in cancer risk below the 10 in 1 million threshold and Chronic Hazard Index would still be less than 1. Therefore, after implementation of mitigation, the Project would result in a less-than-significant impact related to exposure to TAC emissions during construction.

Operational HRA

As discussed in Section 2.4.2.6, an HRA was performed to estimate the Maximum Individual Cancer Risk and Chronic Hazard Index for residential receptors associated with Project operations. Results of the operational HRA are presented in Table 19. Detailed operational model outputs are presented in Appendix E.

Table 19. Operational Health Risk Assessment Results - Unmitigated

Source	Cancer Risk (per million)	HIC	PM _{2.5} (µg/m ³)
Project	3.03E-1	7.00E-05	0.073

BAAQMD CEQA Threshold	100	10.0	0.8
Level of Significance	Less Than Significant	Less Than Significant	Less than Significant

Source: Appendix E.

Notes: CEQA = California Environmental Quality Act

As shown in Table 19, the TAC emissions from operation of the Project would result in a Maximum Individual Cancer Risk of one in a million and a Chronic Hazard Index of 0.0001, which are below the significance thresholds. The Project operational TAC health risk impacts would be less than significant without mitigation.

2.5.3.5 Health Effects of Criteria Air Pollutants

Construction and operation of the Project would not result in emissions that exceed BAAQMD's emission thresholds for any criteria air pollutants. The BAAQMD thresholds are based on the SFBAAB complying with the NAAQS and CAAQS which are protective of public health; therefore, no adverse effects to human health would result from the Project. The following provides a general discussion of criteria air pollutants and their health effects.

Regarding ROG, some ROG would be associated with motor vehicles and construction equipment, while others are associated with architectural coatings and asphalt off-gassing, the emissions of which would not result in exceedances of BAAQMD's thresholds. Generally, the ROG in architectural coatings and asphalt are of relatively low toxicity. Additionally, the contractor is required to procure architectural coatings from a supplier in compliance with the requirements of BAAQMD's Regulation 8, Rule 3 (Architectural Coatings).

In addition, ROGs and NO_x are precursors to O₃, for which the SFBAAB is designated as nonattainment with respect to the NAAQS and CAAQS (the SDAB is designated by EPA as an attainment area for the 1-hour O₃ NAAQS standard and 1997 8-hour NAAQS standard). The health effects associated with O₃, as discussed in Section 2.1.2.1, Criteria Air Pollutants, are generally associated with reduced lung function. The contribution of ROGs and NO_x to regional ambient O₃ concentrations is the result of complex photochemistry. The increases in O₃ concentrations in the SDAB due to O₃ precursor emissions tend to be found downwind from the source location to allow time for the photochemical reactions to occur. However, the potential for exacerbating excessive O₃ concentrations would also depend on the time of year that the ROG emissions would occur because exceedances of the O₃ NAAQS and CAAQS tend to occur between April and October, when solar radiation is highest. The holistic effect of a single Project's emissions of O₃ precursors is speculative due to the lack of quantitative methods to assess this impact. Nonetheless, the ROG and NO_x emissions associated with Project construction could minimally contribute to regional O₃ concentrations and the associated health impacts. Due to the minimal contribution during construction and operation, health impacts would be considered less than significant.

Similar to O₃, construction of the Project would not exceed thresholds for PM₁₀ or PM_{2.5} and would not contribute to exceedances of the NAAQS and CAAQS for particulate matter. Due to the minimal contribution of particulate matter during construction and operation, health impacts would be considered less than significant.

Regarding NO₂, which is a constituent of NO_x, construction of the Project would not contribute to exceedances of the NAAQS and CAAQS for NO₂ since NO_x emissions would be less than the applicable BAAQMD threshold. As described in Section 2.1.2.1, NO₂ health impacts are associated with respiratory irritation, which may be experienced by nearby receptors during the periods of heaviest use of off-road construction equipment. However, these operations would be relatively short term, and the off-road construction equipment would be operating on various portions of the site and would not be concentrated in one portion of the site at any one time. Construction of the Project would not require any stationary emission sources that would create substantial, localized NO₂ impacts.

Based on the preceding considerations, health impacts from Project-related criteria air pollutant emissions would be considered less than significant.

2.5.3.6 Conclusion

The results of the HRA demonstrate that with incorporation of PDF-AQ-1 and after implementation of **MM-AQ-1**, which requires use of Tier 4 Final equipment during construction, the TAC exposure from construction diesel exhaust emissions would result in cancer risk below the 10 in 1 million threshold and a Chronic Hazard Index less than 1.0. Therefore, impacts during construction would be less than significant after mitigation. Furthermore, the emergency generator would be subject to the ATCM and BAAQMD BACT requirements and would require minimal maintenance and testing, resulting in less than significant impacts during operation.

In addition, ROG and NO_x emissions, as described previously, would minimally contribute to regional O₃ concentrations and the associated health effects. In addition to O₃, NO_x emissions would not contribute to potential exceedances of the NAAQS and CAAQS for NO₂. As shown in Table 2, the existing NO₂ concentrations in the area are well below the NAAQS and CAAQS standards. Thus, it is not expected that the Project's operational NO_x emissions would result in exceedances of the NO₂ standards or contribute to the associated health effects. CO tends to be a localized impact associated with congested intersections. The associated CO "hotspots" were discussed previously as a less than significant impact. Thus, the Project's CO emissions would not contribute to

significant health effects associated with this pollutant. PM_{10} and $PM_{2.5}$ would not contribute to potential exceedances of the NAAQS and CAAQS for particulate matter and would not obstruct the SFBAAB from coming into attainment for these pollutants and would not contribute to significant health effects associated with particulates. In addition, the Project would not expose sensitive receptors to substantial pollutant concentrations. Therefore, overall health impacts associated with criteria air pollutants would be considered less than significant.

2.5.4 Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

2.5.4.1 Construction

Odors would be generated from vehicles and/or equipment exhaust emissions during construction of the Project. Odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and asphalt pavement application. Such odors are temporary and for the types of construction activities anticipated for Project components, would generally occur at magnitudes that would not affect substantial numbers of people. Odors are highest near the source and would quickly dissipate. Therefore, impacts associated with odors during construction would be considered less than significant.

2.5.4.2 Operational

Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, there are no quantitative or formulaic methodologies to determine if potential odors would have a significant impact. Examples of land uses and industrial operations that are commonly associated with odor complaints include agricultural uses, wastewater treatment plants, food processing facilities, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding facilities. In addition to the odor source, the distance between the sensitive receptor(s) and the odor source, as well as the local meteorological conditions, are considerations in the potential for a Project to frequently expose the public to objectionable odors. Although localized air quality impacts are focused on potential impacts to sensitive receptors, such as residences and schools, other land uses where people may congregate (e.g., workplaces) or uses with the intent to attract people (e.g., restaurants and visitor-serving accommodations) should also be considered in the evaluation of potential odor nuisance impacts. The Project would not include land uses that would generate objectionable odors, nor would it attract people to an area where there would be a potential for exposure to objectionable odors. The Project is not expected to produce any nuisance odors or place sensitive receptors next to existing objectionable odors; therefore, impacts related to odors caused by the Project during operations would be less than significant.

3 Greenhouse Gas Emissions

3.1 Environmental Setting

3.1.1 Climate Change Overview

Climate change refers to any significant change in measures of climate, such as temperature, precipitation, or wind patterns, lasting for an extended period of time (decades or longer). The Earth's temperature depends on the balance between energy entering and leaving the planet's system. Many factors, both natural and human, can cause changes in Earth's energy balance, including variations in the sun's energy reaching Earth, changes in the reflectivity of Earth's atmosphere and surface, and changes in the greenhouse effect, which affects the amount of heat retained by Earth's atmosphere (EPA 2023c).

The greenhouse effect is the trapping and build-up of heat in the atmosphere (troposphere) near the Earth's surface. The greenhouse effect traps heat in the troposphere through a threefold process as follows: Short-wave radiation emitted by the Sun is absorbed by the Earth; the Earth emits a portion of this energy in the form of long-wave radiation; and GHGs in the upper atmosphere absorb this long-wave radiation and emit it into space and toward the Earth. The greenhouse effect is a natural process that contributes to regulating the Earth's temperature and creates a pleasant, livable environment on the Earth. Human activities that emit additional GHGs to the atmosphere increase the amount of infrared radiation that gets absorbed before escaping into space, thus enhancing the greenhouse effect and causing the Earth's surface temperature to rise.

The scientific record of the Earth's climate shows that the climate system varies naturally over a wide range of time scales and that in general, climate changes prior to the Industrial Revolution in the 1700s can be explained by natural causes, such as changes in solar energy, volcanic eruptions, and natural changes in GHG concentrations. Recent climate changes, in particular the warming observed over the past century, however, cannot be explained by natural causes alone. Rather, it is extremely likely that human activities have been the dominant cause of that warming since the mid-20th century and is the most significant driver of observed climate change (IPCC 2014; EPA 2023c). Human influence on the climate system is evident from the increasing GHG concentrations in the atmosphere, positive radiative forcing, observed warming, and improved understanding of the climate system (IPCC 2014). The atmospheric concentrations of GHGs have increased to levels unprecedented in the last 800,000 years, primarily from fossil fuel emissions and secondarily from emissions associated with land use changes (IPCC 2014). Continued emissions of GHGs will cause further warming and changes in all components of the climate system, which is discussed further in Section 3.1.5, Potential Effects of Climate Change.

3.1.2 Greenhouse Gases and other Climate Forcing Substances

A GHG is any gas that absorbs infrared radiation in the atmosphere; in other words, GHGs trap heat in the atmosphere. GHGs include, but are not limited to, carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), ozone (O₃), water vapor, hydrofluorocarbons (HFCs), hydrochlorofluorocarbons (HCFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF₆), and nitrogen trifluoride (NF₃) (see also 14 CCR 15364.5).⁵ Some GHGs, such as CO₂, CH₄, and N₂O, occur naturally and are emitted to the atmosphere through natural processes and human activities. Of these

⁵ Climate forcing substances include GHGs and other substances such as black carbon and aerosols.

gases, CO₂ and CH₄ are emitted in the greatest quantities from human activities. Manufactured GHGs, which have a much greater heat-absorption potential than CO₂, include fluorinated gases, such as HFCs, HCFCs, PFCs, and SF₆, which are associated with certain industrial products and processes. The following paragraphs provide a summary of the most common GHGs and their sources.⁶

Carbon Dioxide (CO₂). CO₂ is a naturally occurring gas and a by-product of human activities and is the principal anthropogenic GHG that affects the Earth's radiative balance. Natural sources of CO₂ include respiration of bacteria, plants, animals, and fungus; evaporation from oceans; volcanic out-gassing; and decomposition of dead organic matter. Human activities that generate CO₂ are from the combustion of fuels such as coal, oil, natural gas, and wood and changes in land use.

Methane (CH₄). CH₄ is produced through both natural and human activities. CH₄ is a flammable gas and is the main component of natural gas. Methane is produced through anaerobic (without oxygen) decomposition of waste in landfills, flooded rice fields, animal digestion, decomposition of animal wastes, production and distribution of natural gas and petroleum, coal production, and incomplete fossil fuel combustion.

Nitrous Oxide (N₂O). N₂O is produced through natural and human activities, mainly through agricultural activities and natural biological processes, although fuel burning and other processes also create N₂O. Sources of N₂O include soil cultivation practices (microbial processes in soil and water), especially the use of commercial and organic fertilizers, manure management, industrial processes (such as in nitric acid production, nylon production, and fossil-fuel-fired power plants), vehicle emissions, and using N₂O as a propellant (such as in rockets, racecars, and aerosol sprays).

Fluorinated Gases. Fluorinated gases (also referred to as F-gases) are synthetic powerful GHGs emitted from many industrial processes. Fluorinated gases are commonly used as substitutes for stratospheric ozone-depleting substances (e.g., CFCs, HCFCs, and halons). The most prevalent fluorinated gases include the following:

- **Hydrofluorocarbons:** HFCs are compounds containing only hydrogen, fluorine, and carbon atoms. HFCs are synthetic chemicals used as alternatives to ozone-depleting substances in serving many industrial, commercial, and personal needs. HFCs are emitted as by-products of industrial processes and are used in manufacturing.
- **Perfluorocarbons:** PFCs are a group of human-made chemicals composed of carbon and fluorine only. These chemicals were introduced as alternatives, with HFCs, to the ozone depleting substances. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing. Since PFCs have stable molecular structures and do not break down through the chemical processes in the lower atmosphere, these chemicals have long lifetimes, ranging between 10,000 and 50,000 years.
- **Sulfur Hexafluoride:** SF₆ is a colorless gas soluble in alcohol and ether and slightly soluble in water. SF₆ is used for insulation in electric power transmission and distribution equipment, semiconductor manufacturing, the magnesium industry, and as a tracer gas for leak detection.
- **Nitrogen Trifluoride:** NF₃ is used in the manufacture of a variety of electronics, including semiconductors and flat panel displays.

⁶ The descriptions of GHGs are summarized from the IPCC Fourth Assessment Report (2007), CARB's "Glossary of Terms Used in GHG Inventories" (2018), and EPA's "Climate Change" (2022).

Chlorofluorocarbons (CFCs). CFCs are synthetic chemicals that have been used as cleaning solvents, refrigerants, and aerosol propellants. CFCs are chemically unreactive in the lower atmosphere (troposphere) and the production of CFCs was prohibited in 1987 due to the chemical destruction of stratospheric O₃.

Hydrochlorofluorocarbons (HCFCs). HCFCs are a large group of compounds, whose structure is very close to that of CFCs—containing hydrogen, fluorine, chlorine, and carbon atoms—but including one or more hydrogen atoms. Like HFCs, HCFCs are used in refrigerants and propellants. HCFCs were also used in place of CFCs for some applications; however, their use in general is being phased out.

Black Carbon. Black carbon is a component of fine particulate matter, which has been identified as a leading environmental risk factor for premature death. It is produced from the incomplete combustion of fossil fuels and biomass burning, particularly from older diesel engines and forest fires. Black carbon warms the atmosphere by absorbing solar radiation, influences cloud formation, and darkens the surface of snow and ice, which accelerates heat absorption and melting. Black carbon is a short-lived species that varies spatially, which makes it difficult to quantify the global warming potential. Diesel particulate matter emissions are a major source of black carbon and are TACs that have been regulated and controlled in California for several decades to protect public health. In relation to declining diesel particulate matter from the California Air Resources Board's (CARB's) regulations pertaining to diesel engines, diesel fuels, and burning activities, CARB estimates that annual black carbon emissions in California have reduced by 70% between 1990 and 2010, with 95% control expected by 2020 (CARB 2014).

Water Vapor. The primary source of water vapor is evaporation from the ocean, with additional vapor generated by sublimation (change from solid to gas) from ice and snow, evaporation from other water bodies, and transpiration from plant leaves. Water vapor is the most important, abundant, and variable GHG in the atmosphere and maintains a climate necessary for life.

Ozone (O₃). Tropospheric O₃, which is created by photochemical reactions involving gases from both natural sources and human activities, acts as a GHG. Stratospheric O₃, which is created by the interaction between solar ultraviolet radiation and molecular oxygen (O₂), plays a decisive role in the stratospheric radiative balance. Depletion of stratospheric O₃, due to chemical reactions that may be enhanced by climate change, results in an increased ground-level flux of ultraviolet-B radiation.

Aerosols. Aerosols are suspensions of particulate matter in a gas emitted into the air through burning biomass (plant material) and fossil fuels. Aerosols can warm the atmosphere by absorbing and emitting heat and can cool the atmosphere by reflecting light.

3.1.3 Global Warming Potential

Gases in the atmosphere can contribute to climate change both directly and indirectly. Direct effects occur when the gas itself absorbs radiation. Indirect radiative forcing occurs when chemical transformations of the substance produce other GHGs, when a gas influences the atmospheric lifetimes of other gases, and/or when a gas affects atmospheric processes that alter the radiative balance of the Earth (e.g., affect cloud formation or albedo) (EPA 2023c). The Intergovernmental Panel on Climate Change (IPCC) developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The GWP of a GHG is defined as the ratio of the time-integrated radiative forcing from the instantaneous release of 1 kilogram of

a trace substance relative to that of 1 kilogram of a reference gas (IPCC 2014). The reference gas used is CO₂; therefore, GWP-weighted emissions are measured in metric tons CO₂ equivalent (MT CO₂e).

The current version of the CalEEMod (version 2022.1) assumes that the GWP for CH₄ is 25 (so emissions of 1 MT of CH₄ are equivalent to emissions of 25 MT of CO₂), and the GWP for N₂O is 298, based on the IPCC Fourth Assessment Report (IPCC 2007). The GWP values identified in CalEEMod were applied to the Project.

3.1.4 Sources of Greenhouse Gas Emissions

Global Inventory

Anthropogenic GHG emissions worldwide in 2020 (the most recent year for which data is available) totaled approximately 49,800 million metric tons (MMT) of CO₂e, excluding land use change and forestry (PBL 2022). The top six GHG emitters include China, the United States, the Russian Federation, India, Japan, and the European Union, which accounted for approximately 60% of the total global emissions, or approximately 30,270 MMT CO₂e (PBL 2022). Table 20 presents the top GHG-emissions-producing countries.

Table 20. Six Top GHG Producer Countries

Emitting Countries	2020 GHG Emissions (MMT CO ₂ e) ^{a,b}
China	14,300
United States	5,640
European Union	3,440
India	3,520
Russian Federation	2,210
Japan	1,160
Total	30,270

Source: PBL 2022.

Notes: MMT CO₂e = million metric tons of carbon dioxide equivalent.

^a Column may not add due to rounding.

^b GHG emissions do not include land use change and forestry-related GHG emissions.

National Inventory

Per the EPA Inventory of U.S. Greenhouse Gas Emissions and Sinks⁷: 1990 to 2021, total United States GHG emissions were approximately 6,340 MMT CO₂e in 2021 (EPA 2023d). Total U.S. emissions have decreased by 2.3 percent from 1990 to 2021, down from a high of 15.8 percent above 1990 levels in 2007. Emissions increased from 2020 to 2021 by 5.2 percent (314.3 MMT CO₂e). Net emissions (i.e., including sinks) were 5,586.0 MMT CO₂e in 2021. Overall, net emissions increased 6.4 percent from 2020 to 2021 and decreased 16.6 percent from 2005 levels. Between 2020 and 2021, the increase in total GHG emissions was driven largely by an increase in CO₂ emissions from fossil fuel combustion due to economic activity rebounding after the height of the COVID-19 pandemic. The CO₂ emissions from fossil fuel combustion increased by 6.8 percent from 2020 to 2021, including an 11.4 percent increase in transportation sector emissions and a 7.0 percent increase in electric power sector emissions. The increase in electric power sector emissions was due in part to an increase in electricity demand of 2.4 percent since 2020. Overall, there has been a decrease in electric power sector emissions from 1990 through

⁷ A “sink” is a natural environment that absorbs carbon dioxide from the atmosphere.

2021, which reflects the combined impacts of long-term trends in many factors, including population, economic growth, energy markets, technological changes including energy efficiency, and the carbon intensity of energy fuel choices (EPA 2023d).

State Inventory

According to California's 2000–2020 GHG emissions inventory (2022 edition), California emitted approximately 369.2 MMT CO₂e in 2020, including emissions resulting from out-of-state electrical generation (CARB 2022a). The sources of GHG emissions in California include transportation, industry, electric power production from both in-state and out-of-state sources, residential and commercial activities, agriculture, high-GWP substances, and recycling and waste. Table 21 presents California GHG emission source categories and their relative contributions to the emissions inventory in 2020.

Table 21. GHG Emissions Sources in California

Source Category	Annual GHG Emissions (MMT CO ₂ e)	Percent of Total*
Transportation	136.60	37%
Industrial uses	73.84	20%
Electricity generation ^a	59.07	16%
Residential and commercial uses	36.92	10%
Agriculture and Forestry	33.22	9%
High GWP substances	22.15	6%
Recycling and waste	7.38	2%
Totals	369.2	100%

Source: CARB 2022a.

Notes: GHG = greenhouse gas; GWP = global warming potential; MMT CO₂e = million metric tons of carbon dioxide equivalent. Emissions reflect 2020 California GHG inventory.

Totals may not sum due to rounding.

^a Includes emissions associated with imported electricity, which account for 18.46 MMT CO₂e.

Per capita GHG emissions in California have dropped from a 2001 peak of 13.8 MT per person to 9.3 MT per person in 2020, a 33% decrease. In 2016, statewide GHG emissions dropped below the 2020 GHG Limit of 431 MMT CO₂e and have remained below the Limit since that time (CARB 2022a).

Local Inventories

According to the GHG inventory data from the County's 2014 Community Climate Action Plan (CCAP), in 2005, the Unincorporated County emitted 930,000 CO₂e (County of Alameda 2014). As outlined in Table 22, Alameda County GHG Emissions by Sectors, Transportation generated 60% of these emissions. Similar to emissions trends statewide, electricity generation is the second biggest emitter.

Table 22. Alameda County GHG Emissions by Sectors in 2005

Sector	Annual GHG Emissions (MMT CO ₂ e)	Percent of Total
Transportation	556,000	59.8%
Residential Energy use	179,900	19.3%

Table 22. Alameda County GHG Emissions by Sectors in 2005

Sector	Annual GHG Emissions (MMT CO ₂ e)	Percent of Total
Commercial/Industrial Energy use	132,800	14.3%
Waste	30,400	3.3%
Water Consumption	30,900	3.3%
Total	930,00	100

Source: Alameda County 2014.

Notes: GHG = greenhouse gas; MMT CO₂e = million metric tons of carbon dioxide equivalent per year

3.1.5 Potential Effects of Climate Change

Globally, climate change has the potential to affect numerous environmental resources through uncertain impacts related to future air temperatures and precipitation patterns. The 2014 IPCC Synthesis Report indicated that warming of the climate system is unequivocal and since the 1950s, many of the observed changes are unprecedented over decades to millennia. Signs that global climate change has occurred include warming of the atmosphere and ocean, diminished amounts of snow and ice, and rising sea levels (IPCC 2014).

In California, climate change impacts have the potential to affect sea-level rise, agriculture, snowpack and water supply, forestry, wildfire risk, public health, frequency of severe weather events, and electricity demand and supply. The primary effect of global climate change has been a rise in average global tropospheric temperature. Reflecting the long-term warming trend since pre-industrial times, observed global mean surface temperature for the decade 2006–2015 was 0.87°C (1.6°F) (likely between 0.75°C [1.4°F] and 0.99°C [1.8°F]) higher than the average over the 1850–1900 period (IPCC 2018). Scientific modeling predicts that continued emissions of GHGs at or above current rates would induce more extreme climate changes during the twenty-first century than were observed during the twentieth century. Human activities are estimated to have caused approximately 1.0°C (1.8°F) of global warming above pre-industrial levels, with a likely range of 0.8°C to 1.2°C (1.4°F to 2.2°F) (IPCC 2018). Global warming is likely to reach 1.5°C (2.7°F) between 2030 and 2052 if it continues to increase at the current rate (IPCC 2018).

Although climate change is driven by global atmospheric conditions, climate change impacts are felt locally. A scientific consensus confirms that climate change is already affecting California. The Office of Environmental Health Hazard Assessment identified various indicators of climate change in California, which are scientifically based measurements that track trends in various aspects of climate change. Many indicators reveal discernible evidence that climate change is occurring in California and is having significant, measurable impacts in the state. Changes in the state's climate have been observed, including an increase in annual average air temperature with record warmth from 2012 to 2016, more frequent extreme heat events, more extreme drought, a decline in winter chill, an increase in cooling degree days and a decrease in heating degree days, and an increase in variability of statewide precipitation (OEHHA 2018).

Warming temperatures and changing precipitation patterns have altered California's physical systems—the ocean, lakes, rivers, and snowpack—upon which the state depends. Winter snowpack and spring snowmelt runoff from the Sierra Nevada and southern Cascade Mountains provide approximately one-third of the state's annual water supply. Impacts of climate on physical systems have been observed such as high variability of snow-water content (i.e., amount of water stored in snowpack), decrease in snowmelt runoff, glacier change (loss in area), rise in sea

levels, increase in average lake water temperature and coastal ocean temperature, and a decrease in dissolved oxygen in coastal waters (OEHHA 2018).

Impacts of climate change on biological systems, including humans, wildlife, and vegetation, have also been observed, including climate change impacts on terrestrial, marine, and freshwater ecosystems. As with global observations, species responses include those consistent with warming: elevational or latitudinal shifts in range, changes in the timing of key plant and animal life cycle events, and changes in the abundance of species and in community composition. Humans are better able to adapt to a changing climate than plants and animals in natural ecosystems. Nevertheless, climate change poses a threat to public health as warming temperatures and changes in precipitation can affect vector-borne pathogen transmission and disease patterns in California as well as the variability of heat-related deaths and illnesses. In addition, since 1950, the area burned by wildfires each year has followed an increasing trend overall.

The California Natural Resources Agency (CNRA) has released four California Climate Change Assessments (2006, 2009, 2012, and 2018), which have addressed the following: acceleration of warming across the state, more intense and frequent heat waves, greater riverine flows, accelerating sea level rise, more intense and frequent drought, more severe and frequent wildfires, more severe storms and extreme weather events, shrinking snowpack and less overall precipitation, and ocean acidification, hypoxia, and warming. A summary of current and future climate change impacts to resource areas in California, as discussed in the Safeguarding California: Reducing Climate Risk (CNRA 2014), is provided in the following text.

Agriculture. The impacts of climate change on the agricultural sector are far more severe than the typical variability in weather and precipitation patterns that occur year to year. Some of the specific challenges faced by the agricultural sector and farmers include more drastic and unpredictable precipitation and weather patterns; extreme weather events that range from severe flooding to extreme drought, to destructive storm events; significant shifts in water availability and water quality; changes in pollinator lifecycles; temperature fluctuations, including extreme heat stress and decreased chill hours; increased risks from invasive species and weeds, agricultural pests and plant diseases; and disruptions to the transportation and energy infrastructure supporting agricultural production. These challenges and associated short-term and long-term impacts can have both positive and negative effects on agricultural production. Nonetheless, it is predicted that current crop and livestock production will suffer long-term negative effects resulting in a substantial decrease in the agricultural sector if not managed or mitigated.

Biodiversity and Habitat. The state's extensive biodiversity stems from its varied climate and assorted landscapes, which have resulted in numerous habitats where species have evolved and adapted over time. Specific climate change challenges to biodiversity and habitat include species migration in response to climatic changes, range shift, and novel combinations of species; pathogens, parasites and disease; invasive species; extinction risks; changes in the timing of seasonal life-cycle events; food web disruptions; and threshold effects (i.e., a change in the ecosystem that results in a "tipping point" beyond which irreversible damage or loss has occurs). Habitat restoration, conservation, and resource management across California and through collaborative efforts amongst public, private and nonprofit agencies has assisted in the effort to fight climate change impacts on biodiversity and habitat. One of the key measures in these efforts is ensuring species' ability to relocate as temperature and water availability fluctuate as a result of climate change, based on geographic region.

Energy. The energy sector provides California residents with a supply of reliable and affordable energy through a complex integrated system. Specific climate change challenges for the energy sector include temperature, fluctuating precipitation patterns, increasing extreme weather events and sea level rise. Increasing temperatures

and reduced snowpack negatively impact the availability of a steady flow of snowmelt to hydroelectric reservoirs. Higher temperatures also reduce the capacity of thermal power plants since power plant cooling is less efficient at higher ambient temperatures. Natural gas infrastructure in coastal California is threatened by sea level rise and extreme storm events.

Forestry. Forests occupy approximately 33% of California's 100 million acres and provide key benefits such as wildlife habitat, absorption of CO₂, renewable energy and building materials. The most significant climate change related risk to forests is accelerated risk of wildfire and more frequent and severe droughts. Droughts have resulted in more large-scale mortalities and combined with increasing temperatures have led to an overall increase in wildfire risks. Increased wildfire intensity subsequently increases public safety risks, property damage, fire suppression and emergency response costs, watershed and water quality impacts and vegetation conversions. These factors contribute to decreased forest growth, geographic shifts in tree distribution, loss of fish and wildlife habitat and decreased carbon absorption. Climate change may result in increased establishment of non-native species, particularly in rangelands where invasive species are already a problem. Invasive species may be able to exploit temperature or precipitation changes, or quickly occupy areas denuded by fire, insect mortality or other climate change effects on vegetation.

Ocean and Coastal Ecosystems and Resources. Sea level rise, changing ocean conditions and other climate change stressors are likely to exacerbate long-standing challenges related to ocean and coastal ecosystems in addition to threatening people and infrastructure located along the California coastline and in coastal communities. Sea level rise in addition to more frequent and severe coastal storms and erosion are threatening vital infrastructure such as roads, bridges, power plants, ports and airports, gasoline pipes, and emergency facilities, as well as negatively impacting the coastal recreational assets such as beaches and tidal wetlands. Water quality and ocean acidification threaten the abundance of seafood and other plant and wildlife habitats throughout California and globally.

Public Health. Climate change can impact public health through various environmental changes and is the largest threat to human health in the twenty-first century. Changes in precipitation patterns affect public health primarily through potential for altered water supplies, and extreme events such as heat, floods, droughts, and wildfires. Increased frequency, intensity and duration of extreme heat and heat waves is likely to increase the risk of mortality due to heat related illness as well as exacerbate existing chronic health conditions. Other extreme weather events are likely to negatively impact air quality and increase or intensify respiratory illness such as asthma and allergies. Additional health impacts that may be impacted by climate change include cardiovascular disease, vector-borne diseases, mental health impacts, and malnutrition injuries. Increased frequency of these ailments is likely to subsequently increase the direct risk of injury and/or mortality.

Transportation. Residents of California rely on airports, seaports, public transportation and an extensive roadway network to gain access to destinations, goods and services. While the transportation industry is a source of GHG emissions it is also vulnerable to climate change risks. Particularly, sea level rise and erosion threaten many coastal California roadways, airports, seaports, transit systems, bridge supports, and energy and fueling infrastructure. Increasing temperatures and extended periods of extreme heat threaten the integrity of the roadways and rail lines. High temperatures cause the road surfaces to expand which leads to increased pressure and pavement buckling. High temperatures can also cause rail breakages, which could lead to train derailment. Other forms of extreme weather events, such as extreme storm events, can negatively impact infrastructure which can impair movement of peoples and goods, or potentially block evacuation routes and emergency access roads. Increased wildfires, flooding, erosion risks, landslides, mudslides, and rockslides can all profoundly impact the transportation system and pose a serious risk to public safety.

Water. Water resources in California support residences, plants, wildlife, farmland, landscapes and ecosystems and bring trillions of dollars in economic activity. Climate change could seriously impact the timing, form, amount of precipitation, runoff patterns, and frequency and severity of precipitation events. Higher temperatures reduce the amount of snowpack and lead to earlier snowmelt, which can impact water supply availability, natural ecosystems and winter recreation. Water supply availability during the intense dry summer months is heavily dependent on the snowpack accumulated during the wintertime. Increased risk of flooding has a variety of public health concerns including water quality, public safety, property damage, displacement and post-disaster mental health problems. Prolonged and intensified droughts can also negatively groundwater reserves and result in increased overdraft and subsidence. Droughts can also negatively impact agriculture and farmland throughout the state. The higher risk of wildfires can lead to increased erosion, which can negatively impact watersheds and result in poor water quality. Water temperatures are also prone to increase, which can negatively impact wildlife that rely on a specific range of temperatures for suitable habitat.

In addition to the potential statewide effects of climate change, to address local and regional governments need for information to support action in their communities, the CNRA Fourth Assessment includes reports for nine regions of the state, including the San Francisco Bay Region (which includes Alameda County, where the Project is located). Key projected climate changes for the San Francisco Bay Region include the following (CNRA 2019):

- The impacts of climate change are already being felt in the San Francisco Bay Area and Northern California:
 - Overall, the Bay Area's average annual maximum temperature increased by 1.7 °F (0.95 °C) from 1950 to 2005.
 - Several studies suggest that coastal fog along the California coast, so critical to the Bay Area climate, is less frequent than before.
 - Sea level in the Bay Area has risen over 20 centimeters (8 inches) in the last 100 years.
 - The powerful 2015–2016 El Niño, one of the three largest in the historical record, resulted in winter wave energy that was over 50% larger than the typical winter in the Bay Area, driving unprecedented outer coast beach erosion.
 - The 2012–2016 California drought led to the most severe moisture deficits in the last 1,200 years and a 1-in-500 year low in Sierra snowpack. The 2012–2016 record low snowpack resulted in \$2.1 billion in economic losses and 21,000 jobs lost in the agricultural and recreational sectors statewide and exacerbated an ongoing trend of groundwater overdraft.
- These changes are projected to increase significantly in the coming decades over the region:
 - Even with substantial global efforts to reduce GHG emissions, the Bay Area will likely see a significant temperature increase by mid-century. By the end of the century, the difference between lower and higher global emissions scenarios will make a major difference in how much Bay Area temperatures rise.
 - Precipitation in the Bay Area will continue to exhibit high year-to-year variability—"booms and busts"—with very wet and very dry years. The Bay Area's largest winter storms will likely become more intense, and potentially more damaging, in the coming decades. Under a high emissions scenario, average Sierra Nevada snowpack is projected to decline by nearly 20% in the next 2–3 decades, 30% to 60% in mid-century, and by over 80% in late century.
 - Future increases in temperature, regardless of whether total precipitation goes up or down, will likely cause longer and deeper California droughts, posing major problems for water supplies, natural ecosystems, and agriculture.

- California's Fourth Climate Change Assessment projects median sea level rise between 0.74 meters [2.42 feet] (RCP [Regional Comprehensive Plan] 4.5) and 1.37 meters [4.49 feet] (RCP 8.5) for 2100 along the California coast. However, recent science studies, using advanced models and ice sheet observations, suggest the possibility of extensive loss from Antarctic ice sheets in the 21st century — possibly producing sea level rise by 2100 that could approach 3 meters [10 feet].
- Even with high levels of emissions reductions, research now suggests that at least 2 meters [7 feet] of sea level rise is inevitable over the next several centuries due to the lag of sea level rise in response to increasing global temperatures.
- Changes in temperature, precipitation, and sea level rise will produce substantial impacts on Bay Area social systems and the built environment:
 - The three-way relationship between land use, transportation infrastructure, and energy systems—all of which are vulnerable to climate impacts—is perhaps the most critical interdependence in determining the future growth and prosperity of the Bay Area.
 - Future land use decisions will significantly influence the Bay Area's efforts to address climate change, affecting building and transportation energy, urban water demand, and wildfire ignitions. For example, the critical lack of affordable housing in the core of the region is forcing households further south, north, and inland, with negative energy and environmental consequences. At the same time, building energy demand is higher in inland regions (warmer summers/cooler winters) so reducing Bay Area energy consumption will strongly depend on where new housing and business growth are located.
 - Much of the Bay Area's transportation system—airports, roads, and railways—is concentrated along the bay where flooding from sea level rise and storm surge is a major vulnerability.
 - The Bay Area electrical grid is vulnerable to power outages during wind and wildfire events while much of the natural gas transmission system is located along waterways and will be impacted by flooding from sea level rise and extreme storm events.
 - Warmer summers will increase summer energy demand across the region, with the largest increase expected in coastal cities as air conditioning adoption grows there.
 - Climate impacts—such as earlier melting of snowpack, increasing seawater intrusion into groundwater, increased rates of evapotranspiration, and levee failures or subsidence that contaminate Delta supplies—will affect both the quantity of water available and the quality of supplies.
 - Wastewater treatment plants, historically located along bay shorelines where effluent discharge was convenient, are now highly vulnerable to future sea level rise. Rising bay water and groundwater levels will also increase salinity intrusion and subsurface flooding. Climate change will require improved stormwater management in the Bay Area as extreme storm events increase in size and frequency.
 - Bay Area public health is threatened by a number of climate-related changes, including more extreme heat events, increased air pollution from O₃ formation and wildfires, longer and more frequent droughts, and flooding from sea level rise and high-intensity rain events.
 - High levels of socioeconomic inequity in the Bay Area create large differences in the ability of individuals to prepare for and recover from heat waves, floods, and wildfires. Financial resources as well as improved social structures are important to enhance community resilience and reduce these disparities.
 - Heat waves pose increased health risks due to urban heat islands and lack of local experience and cooling infrastructure (air conditioning) in bayside cities. These risks are compounded for low-income communities.

- Natural infrastructure can play an important role in climate change adaptation, enhancing biodiversity and ecosystem services while reducing societal risks.
- While bayside communities are on the front lines for future food risk, many may have limited ability or resources to pursue adaptation strategies. Without inclusive engagement among communities, disparities in economic and political power will undermine regional solutions and leave communities acting independently, with highly variable results for resilience and community health.
- Climate change will produce substantial impacts on Bay Area natural and managed resource systems:
 - The future climate of the Bay Area will become less suitable for evergreen forests—redwoods and Douglas fir—and more favorable for hot-adapted vegetation such as chaparral shrub land.
 - The ability of vegetation to respond to the rapidly changing conditions in the 21st century is poorly understood. It is possible that vegetation will be increasingly “out of sync” with climate and vulnerable to heat and drought.
 - The most threatening effect of climate change to Bay Area wildlife is the impact of rising sea levels on wetlands because of the limited potential for wetlands to move inland and become established. At the same time, less rainfall, more summer heat, and increased drought will hurt amphibians and reptiles, while heat and wildfires may negatively affect upland birds, mammals, amphibians, and reptiles. Some wildlife species may need to shift locations as the vegetation they inhabit transforms with a changing climate.
 - The Bay Area’s mild climate and accessible open spaces are vital to the region’s quality of life. Regional conservation efforts, including coordinated open space protection design and implementation of landscape corridors, climate-smart conservation, and restoration practices, will enhance success in a changing climate.
 - In the Bay Area, future fire activity will be driven by both changes in urban development and in climate. Land use planning, together with fire-safe building standards and near-building vegetation management, are important strategies for managing future fire risk to people and structures.
 - Forests can play an important role in carbon sequestration. Fuel and fire management will be critical, as fire is the primary source of carbon loss from forests. Recently, carbon loss from fires exceeded carbon uptake by vegetation in California.
 - Nearly every aspect of Bay–Delta ecosystems will be affected by climate change as a result of rising sea levels, increases in air temperatures, changes in precipitation, changes in sediment supply and more. All-natural areas of the shore will need to adapt or transform.
 - The interruption of natural processes over the past 200 years as the region has developed has decreased natural Bay–Delta resiliency. A dynamic, resilient ecosystem has become a rigid landscape with brittle features that will have trouble adapting. New approaches that use natural shoreline infrastructure, like beaches, marshes, and mudflats, together with managed retreat where necessary, can create more resilient shorelines that respond well to changing conditions.
 - Nearly 70% of California’s existing area of wine production will be vulnerable under future climate change projections by mid-century. Wine grape production in the Bay Area could be vulnerable to extreme temperatures and temperature-related water scarcity.
 - The sensitivity of Bay Area rangeland vegetation to precipitation dynamics makes these ecosystems particularly vulnerable to climate change. Changes in rainfall regimes are also likely to affect plant production and associated patterns in soil carbon and GHG production. Grazing and rangeland management practices can play a significant role in enhancing soil moisture and belowground carbon

sequestration. Current research highlights the potential role of compost together with grazing on California pasturelands as a targeted strategy to increase carbon sequestration.

- A growing number of Bay Area local governments, regional agencies, non-profits, and private sector stakeholders are taking actions that advance climate adaptation and resilience:
 - Projects include comprehensive vulnerability assessments, plans for infrastructure improvements, new governance structures, and actual on-the-ground projects to address sea level rise, drought, and other climate impacts.
 - Examples include Resilient by Design: Bay Area Challenge, the Sonoma County Regional Climate Authority, Adaptation to Rising Tides, the Bay Area Regional Reliability Project, Bay Area Regional Health Inequities Initiative, San Francisco Climate & Health Profile, RISE SF Bay, Marin County C-SMART, Sea Change San Mateo County, Climate Ready North Bay, and the San Francisco Bay.

3.2 Regulatory Setting

3.2.1 Federal

Massachusetts v. EPA. In *Massachusetts v. EPA* (April 2007), the U.S. Supreme Court directed the EPA administrator to determine whether GHG emissions from new motor vehicles cause or contribute to air pollution that may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. In December 2009, the administrator signed a final rule with the following two distinct findings regarding GHGs under Section 202(a) of the federal Clean Air Act:

- The Administrator found that elevated concentrations of GHGs—CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆—in the atmosphere threaten the public health and welfare of current and future generations. This is the “endangerment finding.”
- The Administrator further found the combined emissions of GHGs—CO₂, CH₄, N₂O, and HFCs—from new motor vehicles and new motor vehicle engines contribute to the GHG air pollution that endangers public health and welfare. This is the “cause or contribute finding.”

These two findings were necessary to establish the foundation for regulation of GHGs from new motor vehicles as air pollutants under the Clean Air Act.

Federal Clean Air Act. The EPA is responsible for implementing federal policy to address GHGs. The federal government administers a wide array of public-private partnerships to reduce the GHG intensity generated in the United States. These programs focus on energy efficiency, renewable energy, methane and other non-CO₂ gases, agricultural practices, and implementation of technologies to achieve GHG reductions. USEPA implements numerous voluntary programs that contribute to the reduction of GHG emissions. These programs (e.g., the ENERGY STAR® labeling system for energy-efficient products) play a significant role in encouraging voluntary reductions from large corporations, consumers, industrial and commercial buildings, and many major industrial sectors. In 2009, the USEPA Administrator signed two distinct findings regarding GHGs under Section 202(a) of the federal CAA. USEPA adopted a Final Endangerment Finding for the six defined GHGs (CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆). The Endangerment Finding was required before USEPA could regulate GHG emissions under Section 202(a)(1) of the CAA. USEPA also adopted a Cause or Contribute Finding in which the USEPA Administrator found that GHG emissions from new motor vehicle and motor vehicle engines are contributing to air pollution, which is

endangering public health and welfare. These findings do not themselves impose any requirements on industry or other entities. However, these actions were a prerequisite for implementing GHG emissions standards for vehicles.

Energy Independence and Security Act. The Energy Independence and Security Act of 2007 (December 2007), among other key measures, would do the following, which would aid in the reduction of national GHG emissions:

1. Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard requiring fuel producers to use at least 36 billion gallons of biofuel by 2022.
2. Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.
3. Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

Federal Vehicle Standards. In response to a U.S. Supreme Court ruling, the Bush Administration issued Executive Order (EO) 13432 in 2007 directing the EPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the NHTSA issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011, and in 2010, the EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016 (75 FR 25324–25728).

In 2010, President Barack Obama issued a memorandum directing the Department of Transportation, Department of Energy, EPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the EPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017–2025 light-duty vehicles. The proposed standards projected to achieve 163 grams per mile of CO₂ by model year 2025 on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon if this level were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021 (77 FR 62624–63200). On January 12, 2017, the EPA finalized its decision to maintain the current GHG emissions standards for model years 2022–2025 cars and light trucks (EPA 2023e).

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the EPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018 (76 FR 57106–57513). The standards for CO₂ emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the EPA, this regulatory program will reduce GHG emissions and fuel consumption for the affected vehicles by 6%–23% over the 2010 baselines.

In March 2022, NHTSA established new fuel economy standards that would require an industry-wide fleet average of approximately 49 miles per gallon for passenger cars and light trucks in model year 2026, by increasing fuel efficiency by 8% annually for model years 2024 and 2025, and 10% annually for model year 2026.

Fuel Efficiency Standards for Construction Equipment

The federal government sets fuel efficiency standards for non-road diesel engines that are used in construction equipment. The regulations, contained in 40 Code of Federal Regulations (CFR) Parts 1039, 1065, and 1068, include multiple tiers of emission standards. Most recently, the USEPA adopted a comprehensive national program to reduce emissions from non-road diesel engines by integrating engine and fuel controls as a system to gain the greatest reductions. To meet these Tier 4 emission standards, engine manufacturers will produce new engines with advanced control technologies (USEPA, 2004).

Inflation Reduction Act of 2022. The Inflation Reduction Act was signed into law by President Biden in August 2022. The bill includes specific investment in energy and climate reform and is projected to reduce GHG emissions within the U.S. by 40% as compared to 2005 levels by 2030. The bill allocates funds to boost renewable energy infrastructure (e.g., solar panels and wind turbines), includes tax credits for the purchase of electric vehicles, and includes measures that will make homes more energy efficient.

3.2.2 State

The statewide GHG emissions regulatory framework is summarized below by category: state climate change targets, building energy, renewable energy and energy procurement, mobile sources, solid waste, water, and other state regulations and goals. The following text describes executive orders, legislation, regulations, and other plans and policies that would directly or indirectly reduce GHG emissions and/or address climate change issues.

State Climate Change Targets

The state has taken a number of actions to address climate change. These include executive orders, legislation, and CARB plans and requirements. These are summarized below.

EO S-3-05. EO S-3-05 (June 2005) established the following statewide goals: GHG emissions should be reduced to 2000 levels by 2010, GHG emissions should be reduced to 1990 levels by 2020, and GHG emissions should be reduced to 80% below 1990 levels by 2050.

EO S-3-05 also directed the California EPA to report biannually on progress made toward meeting the GHG targets and the impacts to California due to global warming, including impacts to water supply, public health, agriculture, the coastline, and forestry. The Climate Action Team was formed, which subsequently issued reports from 2006 to 2010 (CAT 2016).

AB 32. In furtherance of the goals established in EO S-3-05, the legislature enacted AB 32 (Núñez and Pavley). The bill is referred to as the California Global Warming Solutions Act of 2006 (September 27, 2006). AB 32 provided initial direction on creating a comprehensive multiyear program to limit California's GHG emissions at 1990 levels by 2020 and initiate the transformations required to achieve the state's long-range climate objectives.

EO B-30-15. EO B-30-15 (April 2015) identified an interim GHG reduction target in support of targets previously identified under EO S-3-05 and AB 32. EO B-30-15 set an interim target goal of reducing statewide GHG emissions to 40% below 1990 levels by 2030 to keep California on its trajectory toward meeting or exceeding the long-term goal of reducing statewide GHG emissions to 80% below 1990 levels by 2050, as set forth in EO S-3-05. To facilitate achievement of this goal, EO B-30-15 calls for an update to CARB's Scoping Plan to express the 2030 target in terms of MMT CO₂e. The executive order also calls for state agencies to continue to develop and implement GHG emissions reduction programs in support of the reduction targets. Sector-specific agencies in transportation,

energy, water, and forestry were required to prepare GHG reduction plans by September 2015, followed by a report on action taken in relation to these plans in June 2016. EO B-30-15 does not require local agencies to take any action to meet the new interim GHG reduction target.

SB 32 and AB 197. SB 32 and AB 197 (enacted in 2016) are companion bills that set a new statewide GHG reduction target, make changes to CARB's membership and increase legislative oversight of CARB's climate change-based activities, and expand dissemination of GHG and other air-quality-related emissions data to enhance transparency and accountability. More specifically, SB 32 codified the 2030 emissions reduction goal of EO B-30-15 by requiring CARB to ensure that statewide GHG emissions are reduced to 40% below 1990 levels by 2030. AB 197 established the Joint Legislative Committee on Climate Change Policies, consisting of at least three members of the Senate and three members of the Assembly to provide ongoing oversight over implementation of the state's climate policies. AB 197 also added two members of the Legislature to CARB as nonvoting members; requires CARB to make available and update (at least annually via its website) emissions data for GHGs, criteria air pollutants, and TACs from reporting facilities; and requires CARB to identify specific information for GHG emissions reduction measures when updating the Scoping Plan.

EO B-55-18. EO B-55-18 (September 2018) establishes a statewide policy for the state to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net-negative emissions thereafter. The goal is an addition to the existing statewide targets of reducing the state's GHG emissions. CARB will work with relevant state agencies to ensure that future scoping plans identify and recommend measures to achieve the carbon neutrality goal.

AB 1279. The Legislature enacted AB 1279, the California Climate Crisis Act, in September 2022. The bill declares the policy of the state to achieve net zero GHG emissions as soon as possible, but no later than 2045, and achieve and maintain net negative GHG emissions thereafter. Additionally, the bill requires that by 2045, statewide anthropogenic GHG emissions be reduced to at least 85% below 1990 levels. Although AB 1279 establishes an overall policy to achieve net zero greenhouse gas emissions as soon as possible, but no later than 2045, recognizing the need to implement carbon dioxide removal and carbon capture, utilization and storage technologies, the Legislature established a specific target of 85% below 1990 levels by 2045 for anthropogenic GHG emissions. Therefore, the net zero target does not directly apply to development Projects, but the 2045 target of 85% below 1990 levels represents the reductions required to contribute to accomplishing the State's overall net zero policy.

California Air Resources Board's Climate Change Scoping Plan. One specific requirement of AB 32 was for CARB to prepare a scoping plan for achieving the maximum technologically feasible and cost-effective GHG emission reductions by 2020 (Health and Safety Code Section 38561[a]), and to update the plan at least once every 5 years. In 2008, CARB approved the first scoping plan. The Climate Change Scoping Plan: A Framework for Change (Scoping Plan) included a mix of recommended strategies that combined direct regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs calculated to meet the 2020 statewide GHG emissions limit and initiate the transformations needed to achieve the state's long-range climate objectives. The key elements of the Scoping Plan include the following (CARB 2008):

1. Expanding and strengthening existing energy efficiency programs, as well as building and appliance standards.
2. Achieving a statewide renewable energy mix of 33%.
3. Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system and caps sources contributing 85% of California's GHG emissions.

4. Establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets.
5. Adopting and implementing measures pursuant to existing state laws and policies, including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard (17 CCR 95480 et seq.).
6. Creating targeted fees, including a public goods charge on water use, fees on high GWP gases, and a fee to fund the administrative costs of the State of California's long-term commitment to AB 32 implementation.

The Scoping Plan also identified local governments as essential partners in achieving California's goals to reduce GHG emissions because they have broad influence and, in some cases, exclusive authority over activities that contribute to significant direct and indirect GHG emissions through their planning and permitting processes, local ordinances, outreach and education efforts, and municipal operations. Specifically, the Scoping Plan encouraged local governments to adopt a reduction goal for municipal operations, and for community emissions to reduce GHGs by approximately 15% from then levels (2008) by 2020. Many local governments developed community-scale local GHG reduction plans based on this Scoping Plan recommendation.

In 2014, CARB approved the first update to the Scoping Plan. The First Update to the Climate Change Scoping Plan: Building on the Framework (First Update) defined the state's GHG emission reduction priorities for the next 5 years, and laid the groundwork to start the transition to the post-2020 goals set forth in EO S-3-05 and EO B-16-2012. The First Update concluded that California is on track to meet the 2020 target but recommended a 2030 mid-term GHG reduction target be established to ensure a continuum of action to reduce emissions. The First Update recommended a mix of technologies in key economic sectors to reduce emissions through 2050, including energy demand reduction through efficiency and activity changes; large-scale electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and the rapid market penetration of efficient and clean energy technologies. As part of the First Update, CARB recalculated the state's 1990 emissions level, using more recent GWPs identified by the IPCC, from 427 MMT CO₂e to 431 MMT CO₂e (CARB 2014).

In 2015, as directed by EO B-30-15, CARB began working on an update to the Scoping Plan to incorporate the 2030 target of 40% below 1990 levels by 2030 to keep California on its trajectory toward meeting or exceeding the long-term goal of reducing GHG emissions to 80% below 1990 levels by 2050 as set forth in EO S-3-05. The governor called on California to pursue a new and ambitious set of strategies, in line with the five climate change pillars from his inaugural address, to reduce GHG emissions and prepare for the unavoidable impacts of climate change. In the summer of 2016, the legislature affirmed the importance of addressing climate change through passage of SB 32.

In December 2017, CARB adopted California's 2017 Climate Change Scoping Plan (2017 Scoping Plan) for public review and comment (CARB 2017). The 2017 Scoping Plan builds on the successful framework established in the initial Scoping Plan and First Update while identifying new, technologically feasible and cost-effective strategies that will serve as the framework to achieve the 2030 GHG target as established by SB 32 and define the state's climate change priorities to 2030 and beyond. The strategies' commitments include implementing renewable energy and energy efficiency strategies (including the mandates of SB 350), increasing stringency of the Low Carbon Fuel Standard, implementing measures identified in the Mobile Source and Freight Strategies, implementing measures identified in the proposed Short-Lived Climate Pollutant Reduction Strategy, and increasing stringency of SB 375 targets. To fill the gap in additional reductions needed to achieve the 2030 target, it recommends continuing the Cap-and-Trade Program and a measure to reduce GHGs from refineries by 20%.

For local governments, the 2017 Scoping Plan replaced the initial Scoping Plan's 15% reduction goal with a recommendation to aim for a community-wide goal of no more than 6 MT CO_{2e} per capita by 2030, and no more than 2 MT CO_{2e} per capita by 2050, which are consistent with the state's long-term goals. These goals are also consistent with the Under 2 Memorandum of Understanding (Under 2 2016) and the Paris Agreement, which are developed around the scientifically based levels necessary to limit global warming to below 2° C. The 2017 Scoping Plan recognized the benefits of local government GHG planning (e.g., through CAPs) and provided more information regarding tools CARB is working on to support those efforts. It also recognized the CEQA streamlining provisions for Project-level review where there is a legally adequate CAP.⁸

The Scoping Plan recommends strategies for implementation at the statewide level to meet the goals of AB 32, SB 32, and the executive orders, and establishes an overall framework for the measures that will be adopted to reduce California's GHG emissions. A Project is considered consistent with the statutes and executive orders if it meets the general policies in reducing GHG emissions to facilitate the achievement of the state's goals and does not impede attainment of those goals. A Project would be consistent if it will further the objectives and not obstruct their attainment.

CARB adopted the 2022 Scoping Plan Update in December 2022, which outlines the state's plan to reach carbon neutrality by 2045 or earlier, while also assessing the progress the state is making toward reducing GHG emissions by at least 40% below 1990 levels by 2030, as is required by SB 32 and laid out in the Second Update. The carbon neutrality goal requires CARB to expand proposed actions from only the reduction of anthropogenic sources of GHG emissions to also include those that capture and store carbon (e.g., through natural and working lands, or mechanical technologies). The carbon reduction programs build on and accelerate those currently in place, including moving to zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen (CARB 2022b).

The 2022 Scoping Plan also emphasizes that there is no realistic path to carbon neutrality without carbon removal and sequestration, and to achieve the state's carbon neutrality goal, carbon reduction programs must be supplemented by strategies to remove and sequester carbon. Strategies for carbon removal and sequestration include carbon capture and storage from anthropogenic point sources, where CO₂ is captured as it leaves a facility's smokestack and is injected into geologic formations or used in industrial materials (e.g., concrete); and carbon dioxide removal from ambient air, through mechanical (e.g., direct air capture with sequestration) or nature-based (e.g., management of natural and working lands) applications.

Senate Bill 605 and Senate Bill 1383. SB 605 (2014) required CARB to complete a comprehensive strategy to reduce emissions of short-lived climate pollutants in the state, and SB 1383 (2016) required CARB to approve and implement that strategy by January 1, 2018. The Short-Lived Climate Pollutants Reduction Strategy was approved by CARB in March 2017, and lays out a range of options to reduce short-lived climate pollutant emissions in California, including regulations, incentives, and other market-supporting activities. SB 1383 also establishes specific targets for the reduction of short-lived climate pollutants (40% below 2013 levels by 2030 for CH₄ and HFCs, and 50% below 2013 levels by 2030 for anthropogenic black carbon), and provides direction for reductions from dairy and livestock operations and landfills. Accordingly, and as mentioned above, CARB adopted its Short-

⁸ *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490; *San Francisco Tomorrow et al. v. City and County of San Francisco* (2015) 229 Cal.App.4th 498; *San Franciscans Upholding the Downtown Specific Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656; *Sequoiah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 719.

Lived Climate Pollutant Reduction Strategy in March 2017. This strategy establishes a framework for the statewide reduction of emissions of black carbon, CH₄, and fluorinated gases.

Building Energy

Title 24, Part 6. Title 24 of the California Code of Regulations was established in 1978 and serves to enhance and regulate California's building standards. Although not initially promulgated to reduce GHG emissions, Part 6 of Title 24 specifically established Building Energy Efficiency Standards that are designed to ensure new and existing buildings in California achieve energy efficiency and preserve outdoor and indoor environmental quality (CEC 2018). These energy efficiency standards are reviewed every few years by the Building Standards Commission and CEC and revised if necessary (California Public Resources Code [PRC] Section 25402[b][1]). The regulations receive input from members of industry and the public, with the goal of "reducing of wasteful, uneconomic, inefficient, or unnecessary consumption of energy" (PRC Section 25402). These regulations are carefully scrutinized and analyzed for technological and economic feasibility (PRC Section 25402[d]) and cost effectiveness (PRC Sections 25402[b][2] and [b][3]). As a result, these standards save energy, increase electricity supply reliability, increase indoor comfort, avoid the need to construct new power plants, and help preserve the environment.

The 2022 Title 24 standards are the currently applicable building energy efficiency standards and became effective on January 1, 2023. The 2022 Title 24 standards improve upon the 2019 standards for new construction of, and additions and alterations to, residential and nonresidential buildings. The CEC adopted the 2022 Title 24 Energy Code in August 2021 and the California Building Standards Commission approved incorporating the updated code into the California Building Standards Code (CALGreen) in December 2021. The 2022 Energy Code went into effect on January 1, 2023. The 2022 Energy Code focuses on four key areas in newly constructed homes and businesses:

- Encouraging electric heat pump technology for space and water heating, which consumes less energy and produces fewer emissions than gas-powered units.
- Establishing electric-ready requirements for single-family homes to position owners to use cleaner electric heating, cooking, and electric vehicle (EV) charging options whenever they choose to adopt those technologies.
- Expanding solar photovoltaic (PV) system and battery storage standards to make clean energy available onsite and complement the state's progress toward a 100% clean electricity grid.
- Strengthening ventilation standards to improve indoor air quality.

Title 24, Part 11. In addition to the CEC's efforts, in 2008, the California Building Standards Commission adopted the nation's first green building standards. The California Green Building Standards Code (Part 11 of Title 24) is commonly referred to as California's Green Building Standards (CALGreen), and establishes minimum mandatory standards and voluntary standards pertaining to the planning and design of sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and interior air quality. The CALGreen standards took effect in January 2011 and instituted mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential and state-owned buildings, schools, and hospitals. The CALGreen 2022 standards, which are the current standards, became effective January 1, 2023.

Renewable Energy and Energy Procurement

SB 1078 (2002) established the Renewables Portfolio Standard (RPS) program, which requires an annual increase in renewable generation by the utilities.

Under the program, a renewable electrical generation facility is one that uses biomass, solar thermal, photovoltaic, wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation of 30 megawatts or less, digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and that meets other specified requirements with respect to its location.

SB 1368. SB 1368 (September 2006) required the CEC to develop and adopt regulations for GHG emission performance standards for the long-term procurement of electricity by local publicly owned utilities. These standards must be consistent with the standards adopted by the California Public Utilities Commission.

EO S-14-08. EO S-14-08 (November 2008) focused on the contribution of renewable energy sources to meet the electrical needs of California while reducing the GHG emissions from the electrical sector. This EO required that all retail suppliers of electricity in California serve 33% of their load with renewable energy by 2020. Furthermore, the EO directed state agencies to take appropriate actions to facilitate reaching this target. The California Natural Resources Agency (CNRA), through collaboration with the CEC and California Department of Fish and Wildlife (formerly the California Department of Fish and Game), was directed to lead this effort.

EO S-21-09 and SBX1-2. EO S-21-09 (September 2009) directed CARB to adopt a regulation consistent with the goal of EO S-14-08 by July 31, 2010. CARB was further directed to work with the California Public Utilities Commission and CEC to ensure that the regulation builds upon the RPS program and was applicable to investor-owned utilities, publicly owned utilities, direct access providers, and community choice providers. Under this order, CARB was to give the highest priority to those renewable resources that provide the greatest environmental benefits with the least environmental costs and impacts on public health and can be developed the most quickly in support of reliable, efficient, cost-effective electricity system operations. On September 23, 2010, CARB initially approved regulations to implement a Renewable Electricity Standard. However, this regulation was not finalized because of subsequent legislation (SB X1-2, Simitian, statutes of 2011) signed by Governor Brown in April 2011.

SB X1 2 expanded the Renewables Portfolio Standard by establishing a renewable energy target of 20% of the total electricity sold to retail customers in California per year by December 31, 2013, and 33% by December 31, 2020, and in subsequent years. Under the bill, a renewable electrical generation facility is one that uses biomass, solar thermal, photovoltaic, wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation (30 megawatts or less), digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and that meets other specified requirements with respect to its location.

SB X1-2 applies to all electricity retailers in the state including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must meet the renewable energy goals previously listed.

SB 350. SB 350 (October 2015, Clean Energy and Pollution Reduction Act) further expanded the RPS by establishing a goal of 50% of the total electricity sold to retail customers in California per year by December 31, 2030. In addition, SB 350 included the goal to double the energy efficiency savings in electricity and natural gas final end uses (e.g., heating, cooling, lighting, or class of energy uses on which an energy-efficiency program is focused) of retail customers through energy conservation and efficiency. The bill also requires the California Public Utilities Commission, in consultation with the CEC, to establish efficiency targets for electrical and gas corporations consistent with this goal. Regarding mobile sources, as one of its elements, SB 350 establishes a statewide policy for widespread electrification of the transportation sector, recognizing that such electrification is required for achievement of the state's 2030 and 2050 reduction targets (see California Public Utilities Code Section 740.12).

SB 100. SB 100 (2018) increased the standards set forth in SB 350 establishing that 44% of the total electricity sold to retail customers in California per year by December 31, 2024, 52% by December 31, 2027, and 60% by December 31, 2030, be secured from qualifying renewable energy sources. SB 100 states that it is the policy of the state that eligible renewable energy resources and zero-carbon resources supply 100% of the retail sales of electricity to California. This bill requires that the achievement of 100% zero-carbon electricity resources do not increase the carbon emissions elsewhere in the western grid and that the achievement not be achieved through resource shuffling.

SB 1020. SB 1020 (September 2022) revises the standards from SB 100, requiring the following percentage of retail sales of electricity to California end-use customers come from eligible renewable energy resources and zero-carbon resources: 90% by December 31, 2035; 95% by December 31, 2040; and 100% by December 31, 2045.

Mobile Sources

State Vehicle Standards (AB 1493 and EO B-16-12). AB 1493 (July 2002) was enacted in response to the transportation sector accounting for more than one-half of California's CO₂ emissions. AB 1493 required CARB to set GHG emission standards for passenger vehicles, light-duty trucks, and other vehicles determined by the state board to be vehicles that are primarily used for noncommercial personal transportation in the state. AB 1493 required that CARB set GHG emission standards for motor vehicles manufactured in 2009 and all subsequent model years. CARB adopted the standards in September 2004. EO B-16-12 (March 2012) required that state entities under the governor's direction and control support and facilitate the rapid commercialization of zero-emissions vehicles. It ordered CARB, CEC, the California Public Utilities Commission, and other relevant agencies to work with the Plug-In Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to help achieve goals by 2015, 2020, and 2025. On a statewide basis, EO B-16-12 established a target reduction of GHG emissions from the transportation sector equaling 80% less than 1990 levels by 2050. This directive did not apply to vehicles that have special performance requirements necessary for the protection of the public safety and welfare.

In March 2022, EPA reinstated California's authority under the Clean Air Act to implement its own GHG emission standards and ZEV sales mandate. EPA's action concludes its reconsideration of the 2019 SAFE-1 rule by finding that the actions taken under the previous administration as a part of SAFE-1 were decided in error and are now entirely rescinded.

Heavy Duty Truck and Bus Regulation. CARB adopted the final Heavy-Duty Truck and Bus Regulation on December 31, 2014, to reduce diesel particulate matter, a major source of black carbon, and oxides of nitrogen emissions from heavy-duty diesel vehicles (Cal. Code Regs. tit. 13, § 2025). The rule requires diesel particulate matter filters be applied to newer heavier trucks and buses by January 1, 2012, with older vehicles required to comply by January 1, 2015. The rule will require nearly all diesel trucks and buses to be compliant with the 2010 model year engine requirement by January 1, 2023. CARB also adopted an Airborne Toxic Control Measure to limit idling of diesel-fueled commercial vehicles on December 12, 2013. This rule requires diesel-fueled vehicles with gross vehicle weights greater than 10,000 pounds to idle no more than 5 minutes at any location (Cal. Code Regs. tit. 13, § 2485).

EO S-1-07. Issued on January 18, 2007, EO S-1-07 sets a declining Low Carbon Fuel Standard for GHG emissions measured in CO₂e grams per unit of fuel energy sold in California. The initial target of the Low Carbon Fuel Standard was to reduce the carbon intensity of California passenger vehicle fuels by at least 10% by 2020. The Low Carbon

Fuel Standard was subsequently amended in 2018 to require a 20% reduction in carbon intensity by 2030. This new requirement aligns with the California's overall 2030 target of reducing climate changing emissions to 40% below 1990 levels by 2030, set by SB 32. CARB has adopted implementing regulations for both the 10% and 20% carbon intensity reduction targets.

Senate Bill 375. SB 375 (2008) addresses GHG emissions associated with the transportation sector through regional transportation and sustainability plans. SB 375 required CARB to adopt regional GHG reduction targets for the automobile and light-truck sector for 2020 and 2035. Regional metropolitan planning organizations are then responsible for preparing a Sustainable Communities Strategy (SCS) within their Regional Transportation Plan (RTP). The goal of the SCS is to establish a forecasted development pattern for the region that, after considering transportation measures and policies, will achieve, if feasible, the GHG reduction targets. If an SCS is unable to achieve the GHG reduction target, a metropolitan planning organization must prepare an Alternative Planning Strategy demonstrating how the GHG reduction target would be achieved through alternative development patterns, infrastructure, or additional transportation measures or policies.

Pursuant to California Government Code Section 65080(b)(2)(K), an SCS does not regulate the use of land; supersede the land use authority of cities and counties; or require that a city's or county's land use policies and regulations, including those in a general plan, be consistent with it. Nonetheless, SB 375 makes regional and local planning agencies responsible for developing those strategies as part of the federally required metropolitan transportation planning process and the state-mandated housing element process.

Advanced Clean Cars Program. The Advanced Clean Cars program (January 2012) is an emissions-control program for model years 2015 through 2025. The program combines the control of smog- and soot-causing pollutants and GHG emissions into a single coordinated package. The package includes elements to reduce smog-forming pollution, reduce GHG emissions, promote clean cars, and provide the fuels for clean cars. To improve air quality, CARB implemented new emission standards to reduce smog-forming emissions beginning with 2015 model year vehicles. It is estimated that by 2025, cars will emit 75% less smog-forming pollution than the average new car sold in 2012. To reduce GHG emissions, CARB, in conjunction with the EPA and NHTSA, adopted new GHG standards for model year 2017 to 2025 vehicles; the new standards are estimated to reduce GHG emissions by 34% in 2025. The zero-emissions vehicle (ZEV) program will act as the focused technology of the Advanced Clean Cars program by requiring manufacturers to produce increasing numbers of ZEVs and plug-in hybrid electric vehicles in the 2018 to 2025 model years.

The ACC II program establishes the next set of LEV and ZEV requirements for model years after 2025 to contribute to meeting federal ambient air quality ozone standards and California's carbon neutrality standards (CARB 2023e). The ACC II rulemaking package also considers technological feasibility, environmental impacts, equity, economic impacts, and consumer impacts. The ACC II regulations were approved by the California Office of Administrative Law (OAL) and became effective on November 30, 2022.

AB 1236. AB 1236 (October 2015) (Chiu) required a city, county, or city and county to approve an application for the installation of electric vehicle charging stations, as defined, through the issuance of specified permits unless the city or county makes specified written findings based on substantial evidence in the record that the proposed installation would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific, adverse impact. AB 1236 provided for appeal of that decision to the planning commission, as specified. The bill provided that the implementation of consistent statewide standards to achieve the timely and cost-effective installation of electric vehicle charging stations is a matter of statewide

concern. The bill required electric vehicle charging stations to meet specified standards. AB 1236 required a city, county, or city and county with a population of 200,000 or more residents to adopt an ordinance, by September 30, 2016, that created an expedited and streamlined permitting process for electric vehicle charging stations. The bill also required a city, county, or city and county with a population of fewer than 200,000 residents to adopt this ordinance by September 30, 2017.

Advanced Clean Trucks (ACT) Regulation. The purpose of the ACT Regulation (June 2020) is to accelerate the market for zero-emission vehicles in the medium- and heavy-duty truck sector and to reduce emissions NO_x, fine particulate matter, TACs, GHGs, and other criteria pollutants generated from on-road mobile sources (CARB 2023f). Requiring medium- and heavy-duty vehicles to transition to zero-emissions technology will reduce health risks to people living in and visiting California and is needed to help California meet established near- and long-term air quality and climate mitigation targets.

EO N-79-20 (September 2020) requires CARB to develop regulations as follows: (1) Passenger vehicle and truck regulations requiring increasing volumes of new ZEVs sold in the State towards the target of 100% of in-State sales by 2035; (2) medium- and heavy-duty vehicle regulations requiring increasing volumes of new zero-emission trucks and buses sold and operated in the State towards the target of 100% of the fleet transitioning to zero-emission vehicles by 2045 everywhere feasible and for all drayage trucks to be zero emission by 2035; and (3) strategies, in coordination with other State agencies, the EPA and local air districts, to achieve 100% zero-emission from off-road vehicles and equipment operations in the State by 2035. EO N-79-20 called for the development of a Zero-Emissions Vehicle Market Development Strategy, which was released February 2021, to be updated every 3 years, that ensures coordination and implementation of the EO and outlines actions to support new and used ZEV markets. The primary mechanism for achieving the ZEV target for passenger cars and light trucks is the Advanced Clean Cars II (ACCII) Program, approved in August 2022. In addition to ACC II, the Clean Miles Standard regulation will also help enable the goal of 100% ZEV sales in 2035 by creating demand for ZEVs. This regulation will have aggressive requirements for electric miles that will transition ride-hailing fleets to zero-emission operations starting in 2023 and ramping up through 2030. This regulation was approved by CARB in 2021.

EO B-16-12. EO B-16-12 (2012) directs state entities under the Governor's direction and control to support and facilitate development and distribution ZEVs. On a statewide basis, EO B-16-12 also establishes a GHG emissions reduction target from the transportation sector equaling 80% less than 1990 levels by 2050. In furtherance of this executive order, the Governor convened an Interagency Working Group on ZEVs that has published multiple reports regarding the progress made on the penetration of ZEVs in the statewide vehicle fleet.

Solid Waste

AB 939, AB 341, and AB 1826, and SB 1383. In 1989, AB 939, known as the Integrated Waste Management Act (PRC Sections 40000 et seq.), was passed because of the increase in waste stream and decrease in landfill capacity. The statute established the California Integrated Waste Management Board, which oversees a disposal reporting system. AB 939 mandated a reduction of waste being disposed of where jurisdictions were required to meet diversion goals of all solid waste through source reduction, recycling, and composting activities of 25% by 1995 and 50% by 2000.

AB 341 (Chapter 476, Statutes of 2011 [Chesbro]) amended the California Integrated Waste Management Act of 1989 to include a provision declaring that it is the policy goal of the state that not less than 75% of solid waste generated be source-reduced, recycled, or composted by 2020, and annually thereafter. In addition, AB 341 required the California

Department of Resources Recycling and Recovery (CalRecycle) to develop strategies to achieve the state's policy goal. CalRecycle conducted several general stakeholder workshops and several focused workshops, and in August 2015 published a discussion document titled AB 341 Report to the Legislature, which identified five priority strategies that CalRecycle believed would assist the state in reaching the 75% goal by 2020, legislative and regulatory recommendations, and an evaluation of program effectiveness (CalRecycle 2015).

AB 1826 (Chapter 727, Statutes of 2014, effective 2016) requires businesses to recycle their organic waste (i.e., food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste) depending on the amount of waste they generate per week. This law also requires local jurisdictions across the state to implement an organic waste recycling program to divert organic waste generated by businesses, including multi-family residential dwellings that consist of five or more units. The minimum threshold of organic waste generation by businesses decreases over time, which means an increasingly greater proportion of the commercial sector will be required to comply.

SB 1383 (Chapter 395, Statutes of 2016) establishes targets to achieve a 50% reduction in the level of the Statewide disposal of organic waste from the 2014 level by 2020 and a 75% reduction by 2025. CalRecycle was granted the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20% of currently disposed edible food is recovered for human consumption by 2025 (CalRecycle 2019).

Water

SB X7-7/Water Conservation Act of 2009. This regulation required that all water suppliers increase their water use efficiency with an overall goal of reducing per capita urban water use by 20% by December 31, 2020. Each urban water supplier was required to develop water use targets to meet this goal.

EO B-29-15. In response to the ongoing drought in California, EO B-29-15 (April 2015) set a goal of achieving a statewide reduction in potable urban water usage of 25% relative to water use in 2013. The term of the executive order extended through February 28, 2016, although many of the directives have since become permanent water-efficiency standards and requirements. The executive order includes specific directives that set strict limits on water usage in the state. In response to EO B-29-15, the California Department of Water Resources modified and adopted a revised version of the Model Water Efficient Landscape Ordinance that, among other changes, significantly increased the requirements for landscape water use efficiency and broadened its applicability to include new development Projects with smaller landscape areas.

EO B-37-16. Issued May 2016, EO B-37-16 directed the State Water Resources Control Board to adjust emergency water conservation regulations through the end of January 2017 to reflect differing water supply conditions across the state. The State Water Resources Control Board also developed a proposal to achieve a mandatory reduction of potable urban water usage that builds off the mandatory 25% reduction called for in EO B-29-15. The State Water Resources Control Board and Department of Water Resources will develop new, permanent water use targets that build on the existing state law requirements that the state achieve 20% reduction in urban water usage by 2020. EO B-37-16 also specifies that the State Water Resources Control Board permanently prohibit water-wasting practices such as hosing off sidewalks, driveways, and other hardscapes; washing automobiles with hoses not equipped with a shut-off nozzle; using non-recirculated water in fountains and other decorative water features; watering lawns in a manner that causes runoff, or within 48 hours after measurable precipitation; and irrigating ornamental turf on public street medians.

EO N-10-21. In response to a state of emergency due to severe drought conditions, EO N-10-21 (July 2021) called on all Californians to voluntarily reduce their water use by 15% from their 2020 levels. Actions suggested in EO N-10-21 include reducing landscape irrigation, running dishwashers and washing machines only when full, finding and fixing leaks, installing water-efficient showerheads, taking shorter showers, using a shut-off nozzle on hoses, and taking cars to commercial car washes that use recycled water.

Other State Actions

SB 97. SB 97 (Dutton) (August 2007) directed the Governor’s Office of Planning and Research to develop guidelines under CEQA for the mitigation of GHG emissions. In 2008, the Governor’s Office of Planning and Research issued a technical advisory as interim guidance regarding the analysis of GHG emissions in CEQA documents. The advisory indicated that the lead agency should identify and estimate a Project’s GHG emissions, including those associated with vehicular traffic, energy consumption, water usage, and construction activities (OPR 2007). The advisory further recommended that the lead agency determine significance of the impacts and impose all mitigation measures necessary to reduce GHG emissions to a level that is less than significant. The CNRA adopted the CEQA Guidelines amendments in December 2009, which became effective in March 2010.

Under the amended CEQA Guidelines, a lead agency has the discretion to determine whether to use a quantitative or qualitative analysis or apply performance standards to determine the significance of GHG emissions resulting from a particular Project (14 CCR 15064.4[a]). The CEQA Guidelines require a lead agency to consider the extent to which a Project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4[b]). The CEQA Guidelines also allow a lead agency to consider feasible means of mitigating the significant effects of GHG emissions, including reductions in emissions through the implementation of Project features or off-site measures. The adopted amendments do not establish a GHG emissions threshold, instead allowing a lead agency to develop, adopt, and apply its own thresholds of significance or those developed by other agencies or experts. The CNRA also acknowledged that a lead agency may consider compliance with regulations or requirements implementing AB 32 in determining the significance of a Project’s GHG emissions (CNRA 2009a).

With respect to GHG emissions, the CEQA Guidelines state in Section 15064.4(a) that lead agencies should “make a good faith effort, to the extent possible on scientific and factual data, to describe, calculate or estimate” GHG emissions. The CEQA Guidelines note that an agency may identify emissions by either selecting a “model or methodology” to quantify the emissions or by relying on “qualitative analysis or other performance-based standards” (14 CCR 15064.4[a]). Section 15064.4(b) states that the lead agency should consider the following when assessing the significance of impacts from GHG emissions on the environment: the extent a Project may increase or reduce GHG emissions as compared to the existing environmental setting; whether the Project emissions exceed a threshold of significance that the lead agency determines applies to the Project; and the extent to which the Project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4[b]).

Executive Order S-13-08. EO Order S-13-08 (November 2008) is intended to hasten California’s response to the impacts of global climate change, particularly sea-level rise. Therefore, the executive order directs state agencies to take specified actions to assess and plan for such impacts. The final 2009 California Climate Adaptation Strategy report was issued in December 2009 (CNRA 2009b), and an update, *Safeguarding California: Reducing Climate Risk*, followed in July 2014 (CNRA 2014). To assess the state’s vulnerability, the report summarizes key climate change impacts to the state for the

following areas: agriculture, biodiversity and habitat, emergency management, energy, forestry, ocean and coastal ecosystems and resources, public health, transportation, and water.

3.2.3 Local

Association of Bay Area Governments

Regional Transportation/Sustainable Communities Strategy

SB 375 requires MPOs to prepare an SCS in their Regional Transportation Plan. In the Bay Area, MTC and ABAG are jointly responsible for developing and adopting an SCS that integrates transportation, land use, and housing to meet GHG reduction targets set by CARB. CARB set a target of a 7% per capita reduction by 2020 and a 15% per capita reduction by 2035 for the Bay Area. The Plan Bay Area 2050 is a 30-year plan that charts a course for a Bay Area that is affordable, connected, diverse, healthy, and vibrant for all residents through 2050 and beyond. The heart of the plan comprises 35 strategies to improve housing, the economy, transportation, and the environment across the Bay Area's nine counties (MTC and ABAG 2021). Under Plan Bay Area 2050's strategies, just under half of all Bay Area households would live within 0.5 miles of frequent transit by 2050, with this share increasing to more than 70% of households with low incomes. Transportation and environmental strategies that support active and shared modes, combined with a transit-supportive land use pattern, are forecasted to lower the share of Bay Area residents that drive to work alone from 50% in 2015 to 33% in 2050. GHG emissions from transportation would decrease significantly as a result of these transportation and land use changes, and the Bay Area would meet the state mandate of a 19% reduction in per capita emissions by 2035 – but only if all strategies are implemented (MTC and ABAG 2021).

Bay Area Air Quality Management District

Bay Area Clean Air Plan

Air districts typically act in an advisory capacity to local governments in establishing the framework for environmental review of air pollution impacts under CEQA. This may include recommendations regarding significance thresholds, analytical tools to estimate emissions and assess impacts, and mitigation for potentially significant impacts. As discussed in Section 3.3.1, Thresholds of Significance, BAAQMD has adopted numeric CEQA significance thresholds for GHG emissions for lead agencies to use in assessing GHG impacts. See Section 2.2.3.1, Bay Area Air Quality Management District, for additional discussion on BAAQMD.

County of Alameda

Community Climate Action Plan

The County of Alameda adopted a Community Climate Action Plan (CCAP) in 2014 that outlined strategies and measures to reduce the County's contribution to GHG emissions and align with statewide emission targets (i.e., those outlined for 2020 in AB 32). The CCAP identifies six GHG emission reduction strategies: transportation, land use, building energy, water, waste and green infrastructure and a total of 48 reduction measures across all strategies. As previously mentioned, the CCAP was developed to meet the State's 2020 GHG reduction goal. The County is currently working on an updated CCAP that would implement the reduction strategies and measures required to meet the State's 2030 and 2050 GHG reduction targets.

3.3 Significance Criteria and Methodology

3.3.1 Thresholds of Significance

California has developed guidelines to address the significance of GHG emissions impacts that are contained in Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.). Appendix G provides that a project would have a significant environmental impact if it would:

1. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.
2. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

The Appendix G thresholds for GHGs do not prescribe specific methodologies for performing an assessment, do not establish quantitative thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009a). Additional guidance regarding assessment of GHGs is discussed below.

CEQA Guidelines

With respect to GHG emissions, the CEQA Guidelines Section 15064.4(a) states that lead agencies "shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions resulting from a project. The CEQA Guidelines note that an agency has the discretion to either quantify a project's GHG emissions or rely on a "qualitative analysis or performance-based standards" (14 CCR 15064.4[a]). A lead agency may use a "model or methodology" to estimate greenhouse gas emissions and has the discretion to select the model or methodology it considers "most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change" (14 CCR 15064.4[c]). The CEQA Guidelines provide that the lead agency should consider the following when determining the significance of impacts from GHG emissions on the environment (14 CCR 15064.4[b]):

1. Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.
2. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

The CEQA Guidelines do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009). The State of California has not adopted emission-based thresholds for GHG emissions under CEQA. The Governor's Office of Planning and Research's Technical Advisory, titled Discussion Draft CEQA and Climate Change Advisory (OPR 2018), states the following:

[N]either the CEQA statute nor the CEQA Guidelines prescribe thresholds of significance or particular methodologies for performing an impact analysis. This is left to lead agency judgment and discretion,

based upon factual data and guidance from regulatory agencies and other sources where available and applicable. Even in the absence of clearly defined thresholds for GHG emissions, such emissions must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact.

Furthermore, the advisory document indicates that “in the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a ‘significant impact,’ individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice.” Section 15064.7(c) of the CEQA Guidelines specifies that “when adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence.”

On April 20, 2022, the BAAQMD Board of Directors held a public meeting and adopted new recommended CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans (Thresholds for Land Use Projects). BAAQMD recommends these thresholds only for projects that have Notices of Preparation issued after April 20, 2022. The BAAQMD “Thresholds for Land Use Projects” are as follows (BAAQMD 2022); either A or B would be required:

A. Projects must include, at a minimum, the following project design elements:

1. Buildings

- a. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).
- b. The project will not result in any wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.

2. Transportation

- a. Achieve compliance with electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.
- b. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor’s Office of Planning and Research’s Technical Advisory on Evaluating Transportation Impacts in CEQA:
 - i. Residential projects: 15 percent below the existing VMT per capita
 - ii. Office projects: 15 percent below the existing VMT per employee
 - iii. Retail projects: no net increase in existing VMT.

B. Projects must be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

As previously discussed, the County adopted a CCAP in 2014 but it would not meet the requirements outlined under State CEQA Guidelines Section 15183.5(b). Therefore, the project will be evaluated based on Option A.

Additionally, in accordance with Section 15064.4 of the State CEQA Guidelines, GHG emissions resulting from construction and operation of the Project were quantitatively estimated. The potential impacts from Project-related GHG emissions were assessed based on the total increase above the existing environmental setting, which is largely undeveloped, vacant land. The GHG emissions associated with implementation of the Project were estimated using industry standard and accepted software tools, techniques, and emissions factors, as described below for construction and operation under Sections 4.2 and 4.3, respectively. Estimation of emissions is for informational purposes only, for comparison with existing environmental conditions. The significance of the Project's GHG impacts is based on the Project's compliance the BAAQMD's GHG thresholds and with statewide GHG reduction regulations and requirements. At the state level, guidance on reduction strategies for GHG emissions has been provided through the CARB Scoping Plans, CNRA *Natural and Working Lands Climate Smart Strategy*.

As defined by AB 32, CARB is required to develop The Scoping Plan, which provides the framework for actions to achieve the State's GHG emission targets. The Scoping Plan is required to be updated every five years and requires CARB and other state agencies to adopt regulations and initiatives that will reduce GHG emissions statewide. The first Scoping Plan (*Climate Change Proposed Scoping Plan: A Framework for Change*) was adopted in 2008, and was updated in 2014, 2017, and most recently in 2022. The Scoping Plan is not directly applicable to specific projects, nor is it intended to be used for project-level evaluations.⁹ However, given that the Scoping Plan establishes the official framework for the measures and regulations that will be implemented to reduce California's GHG emissions in alignment with the adopted targets, a project would be found to not conflict with the statutes if it would meet the general policies in reducing GHG emissions in order to facilitate the achievement of the state's goals and would not impede attainment of those goals. CARB's 2017 Scoping Plan update was the first to address the state's strategy for achieving the 2030 GHG reduction target set forth in SB 32 (CARB 2017), and the most recent CARB 2022 Scoping Plan update outlines the state's plan to reduce emissions and achieve carbon neutrality by 2045 in alignment with AB 1279 and assesses progress is making toward the 2030 SB 32 target (CARB 2022b). As such, given that SB 32 and AB 1279 are the relevant GHG emission targets, the 2017 and 2022 Scoping Plan updates that outline the strategy to achieve those targets, are the most applicable to the Project.

To achieve the 2030 goal of 40 percent below 1990 GHG emission levels, the 2017 Climate Change Scoping Plan Update (Second Update) included measures to promote renewable energy and energy efficiency (including the mandates of SB 350), increase stringency of the Low Carbon Fuel Standard (LCFS), measures identified in the Mobile Source and Freight Strategies, measures identified in the proposed Short-Lived Climate Pollutant Plan, and increase stringency of SB 375 targets. To fill the gap in additional reductions needed to achieve the 2030 target, the Second Update recommended continuing the Cap-and-Trade Program and a measure to reduce GHGs from refineries by 20%. Additionally, the 2017 Scoping Plan emphasizes the importance of reducing VMT to achieve mobile-source GHG emission reductions in pursuit of overall statewide climate goals and recommends a 15% reduction in total light-duty VMT from the business-as-usual scenario in 2050 in alignment with the Mobile Source Strategy (CARB 2017 and CARB 2021).

As noted in Section 3.2.1.6 above, CARB adopted the *2022 Scoping Plan Update* in November 2022 to discuss progress toward reaching the 2030 target and to address how the state will achieve 85% below 1990 levels and carbon neutrality by 2045, as required by AB 1279. In the 2022 Scoping Plan, CARB builds on and accelerates programs already in place to reduce anthropogenic sources of GHG emissions and introduces new strategies to

⁹ The Final Statement of Reasons for the amendments to the CEQA Guidelines reiterates the statement in the Initial Statement of Reasons that "[t]he Scoping Plan may not be appropriate for use in determining the significance of individual projects because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan" (CNRA 2009).

capture and store carbon. *Appendix D: Local Actions* of the Draft Plan outlines local actions that residential and mixed-use projects can implement to address their largest sources of emissions including transportation electrification, VMT reduction, and building decarbonization. CARB identifies these three sources as “Priority Areas” given that they represent those with the highest GHG reduction potential and GHG reduction opportunities for which local governments and agencies have the most authority (CARB 2022b).

Importantly, the 2022 Update emphasizes that there is no realistic path to reaching the 2045 goal of carbon neutrality without removing and sequestering carbon from the atmosphere. So, in addition to programs that aim to reduce GHG emissions, the Draft Plan proposes strategies to capture and store carbon, highlighting the importance of nature-based solutions through preservation and climate smart management of the state’s natural and working lands (NWLs)¹⁰. Modeling conducted for the 2022 Scoping Plan shows that California’s NWLs are projected to be a net source of emissions (i.e., releasing more CO₂ emissions than they store) through 2045, which is historically due to human activities, such as land use change, and natural disturbances, such as wildfire. Therefore, the ability of the state’s NWLs to act as a net sink (i.e., sequester and store more atmospheric CO₂ than they release) to help support the state’s carbon neutrality goals is dependent on climate smart land management.

If the Project is compliant with the thresholds identified by the BAAQMD and the regulations and actions outlined in the applicable state plans (i.e., 2017 and 2022 Scoping Plan), the Project could appropriately rely on their use as showing compliance with performance-based standards adopted to fulfill the statewide goal for reducing GHG emissions. The Project’s compliance with regulatory programs adopted by CARB, and other state and local agencies is therefore used to evaluate the significance of the Project’s GHG emissions.

3.3.2 Approach and Methodology

3.3.2.1 Construction

Construction of the Project would result in emissions of GHGs primarily associated with use of off-road construction equipment, on-road haul and vendor (material delivery) truck trips, and worker vehicle trips. Emissions from the construction phase the Project were estimated using the CalEEMod Version 2022.1¹¹. Per preliminary Project details, it is assumed that construction of the Project would begin in February 2027 and would last approximately 18 months. A detailed depiction of the construction schedule—including information regarding phasing, equipment used during each phase, haul trucks, vendor trucks, and worker vehicles—is included in Section 2.4.2.1 above. GHG emissions associated with construction were amortized over 30 years, which is the lifetime of the Project before decommissioning. In addition, it was assumed that 6 acre-feet of water would be used during construction. The complete details of the emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

¹⁰ It is important to note that the Third Update emphasizes that reliance on carbon sequestration in the state’s NWLs will not be sufficient to address residual GHG emissions, and achieving carbon neutrality will require research, development, and deployment of additional methods to capture atmospheric GHG emissions (e.g., mechanical direct air capture).

¹¹ CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform to calculate construction and operational emissions from land use development Projects. The model was developed for the California Air Pollution Control Officers Association in collaboration with multiple air districts across the state. Numerous lead agencies in the state, including BAAQMD, use CalEEMod to estimate greenhouse gas emissions in accordance with CEQA Guidelines Section 15064.4(a)(1).

3.3.2.2 Operation

Operation of the Project would generate GHG emissions from mobile sources, area sources, energy use, water use and wastewater generation, solid waste, refrigerants, off-road sources, and stationary sources. As with Project construction, CalEEMod Version 2022.1 was used to estimate potential Project-generated operational GHG emissions based on proposed Project land uses. It was assumed that the Project would be operational following the completion of construction, which would occur in 2028.

Area

CalEEMod was used to estimate operational emissions from area sources (landscaping).

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, roto tillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers, as well as air compressors, generators, and pumps. The emissions associated from landscape equipment use were estimated using CalEEMod defaults. For Alameda County, CalEEMod assumes that landscaping equipment would operate 180 days per year. To be conservative, emissions were estimated assuming that landscape maintenance equipment was powered by gasoline or diesel fuel, and not electrified.

Energy

As represented in CalEEMod, energy sources include emissions associated with building electricity and natural gas usage (non-hearth). The estimated annual electricity consumption from the Project was provided by the applicant and assumed to be 17,520 megawatt-hours per year. The Project was not assumed to use natural gas. CalEEMod default energy intensity factors (CO₂, CH₄, and N₂O mass emissions per kilowatt-hour) for PG&E is based on the value for PG&Es energy mix in 2028.

Mobile Sources

Following the completion of construction activities, the Project would generate GHG emissions from mobile sources (vehicular traffic) as a result of the periodic maintenance of the Project. The Project was assumed to require up to three employees visiting the BESS facility sites 5 days a week for operation and maintenance. The estimated trip lengths and trip modes were based on CalEEMod default data. CalEEMod was used to estimate emissions from proposed vehicular sources (refer to Appendix A). CalEEMod default data, including temperature, trip characteristics, variable start information, and emissions factors, were conservatively used for the model inputs. Project-related traffic was assumed to include a mixture of vehicles in accordance with the associated use, as modeled within CalEEMod, which is based on the CARB EMFAC2021 model. Emission factors representing the vehicle mix and emissions for 2028 were used to estimate emissions associated with vehicular sources.

Off-Road Sources

During irregular maintenance, the Project may require the movement or replacement of battery enclosures during the lifetime of the Project. As such, the use of 1 crane and 1 forklift were assumed to assist the lifting and movement of the BESS containers. CalEEMod was used to estimate GHG emissions of the crane and forklift assuming 4 hours of operation on 2 days every year.

Stationary Sources

The Project will install two emergency Diesel generators (4,360 horsepower each) for emergency safety systems during a power outage that lasts longer than 24-48 hours. This 24-hour window would provide operations personnel enough time to safely de-energize and isolate equipment during operation. CalEEMod was used to estimate GHG emissions of the generator assuming 1 hour per day and 400 hours per year for maintenance, testing and anticipated emergency use per BAAQMD guidelines.

Solid Waste

The Project would generate solid waste from the on-site employees, and therefore, result in CO₂e emissions associated with landfill off-gassing. CalEEMod default values for solid waste generation were used to estimate GHG emissions associated with solid waste.

Water and Wastewater

Water consumption estimates for the operations and maintenance building for both indoor and outdoor water use was assumed to be one acre foot based on information provided by the project applicant. Electricity use for water supply is based on the electric pump rating, pump flow rate, electricity intensity factors from CalEEMod for the County, and the indoor and outdoor water use default values in CalEEMod.

Refrigerants

Refrigerants are substances used in equipment for air conditioning (A/C) and refrigeration. Most of the refrigerants used today are HFCs or blends thereof, which can have high GWP values. All equipment that uses refrigerants has a charge size (i.e., quantity of refrigerant the equipment contains), and an operational refrigerant leak rate, and each refrigerant has a GWP that is specific to that refrigerant.

During operations and maintenance, one of the main sources of GHG emissions would be fugitive emissions from equipment containing sulfur hexafluoride (SF₆) gas installed at the proposed collector substation. SF₆ has a GWP of 23,900 using CO₂ at a reference value of 1 (IPCC 2007). The substation would include 230 kV breakers that would contain SF₆ gas. It is estimated that the Project would maintain a total of 1,160 pounds of SF₆ gas at the substation. Although leakage is unlikely, for the purposes of the Project's emissions inventory, it was assumed that the breakers would have a maximum annual leak rate of 0.5% in accordance with the Institute of Electrical and Electronics Engineers PC37.122 – Standard for High Voltage Gas-Insulated Substations Rated Above 52 kV (IEEE 2018). Emissions from SF₆ gas are included as part of refrigerant source emissions.

The BESS units would also contain refrigerants for the purpose of cooling. Each BESS Unit would contain approximately 17 pounds of R-134a which has a GWP of 1,430. It is estimated the Project would maintain a total of approximately 17,000 pounds of R-134a across 1,000 individual BESS units. Although leakage is unlikely, for the purposes of the Project's emissions inventory, it was assumed that the breakers would have a maximum annual leak rate of 0.6%. Emissions from R-134a are included as part of refrigerant source emissions.

3.4 Impact Analysis

This section evaluates the GHG emissions impacts associated with the Project. The significance criteria described in Section 3.3.1, Thresholds of Significance, were used to evaluate impacts associated with the construction and operation of the Project.

Threshold 1: *Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

Threshold 2: *Would the Project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

As discussed in Section 3.3.1, *Approach to Determining Significance* above, the significance of the Project's GHG emission impacts is determined through an evaluation of compliance with regulations and requirements adopted to implement statewide, regional, and local plans for the purpose of reducing GHG emissions. While the GHG emissions increase associated with the Project was quantified, the estimate is provided for informational purposes in accordance with Section 15064.4 of the State CEQA Guidelines and is not used for determination of significance. As such, the Appendix G thresholds are considered together below, beginning with the quantification of the Project's GHG emissions.

3.4.1 Project GHG Emissions

Construction

Table 23 shows the estimated annual GHG construction emissions associated with the Project. Additional information about methodology and approach are provided above in Section 3.3.2. Complete details of the construction emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

Table 23. Estimated Annual Construction GHG Emissions

Year	CO ₂	CH ₄	N ₂ O	R	CO ₂ e
	Metric Tons				
2027	2,265.94	0.10	0.20	1.42	2,330.42
2028	553.74	0.02	0.01	0.12	557.79
2050	423.37	0.02	0.01	<0.01	427.75
Total	3,243.05	0.14	0.23	1.54	3,315.96
Amortized Emissions (30 years)					110.53

Source: CalEEMod Version 2022.1.

Notes: GHG = greenhouse gas; CO₂ = carbon dioxide; CH₄ = methane; N₂O = nitrous oxide; CO₂e = carbon dioxide equivalent. See Appendix A for complete results. <0.01 = reported value is less than 0.01.

As shown in Table 23, the estimated total GHG emissions from construction of the Project would be approximately 3,316 MT CO₂e. When amortized over 30 years, the estimated annual GHG emissions from construction of the Project would be approximately 111 MT CO₂e per year.

Operation

Table 24 shows the estimated annual GHG operational emissions associated with the Project. Total annual operational emissions were calculated in CalEEMod and combined with amortized (35 years) construction emissions.

Table 24. Summary of Estimated Annual Operational GHG Emissions

Emissions Source	CO ₂	CH ₄	N ₂ O	CO ₂ e
	Metric Tons per Year			
Mobile	59.40	<0.01	<0.01	60.30
Area	0.01	6.13	1.25	0.01
Energy	1,621.04	0.26	0.03	1,637.07
Water	0.21	<0.01	<0.01	0.45
Waste	0.08	<0.01	0.00	0.29
Refrigerants ¹	-	-	-	90.89
Off-Road	11.61	<0.01	<0.01	11.65
Stationary	1,819.48	0.07	0.01	1,825.56
Amortized Construction Emissions (35 years)				110.53
Total Project Emissions				3736.76

Source: See Appendix A for complete results.

Notes: GHG = greenhouse gas; MT = metric tons; CO₂ = carbon dioxide; CH₄ = methane; N₂O = nitrous oxide; CO₂e = carbon dioxide equivalent. <0.01 = reported value is less than 0.01.

¹ Includes sulfur hexafluoride (SF₆) gas and R-134a emissions from leakage.

As shown in Table 24, implementation of the Project would result in approximately 3,737 MT CO₂e per year including amortized construction emissions. Complete details of the construction emissions calculations are provided in Appendix A, *Air Quality and Greenhouse Gas Emissions CalEEMod Output Files*.

As noted previously, there is no numeric threshold appropriate to evaluate the significance of Project-generated GHG emissions. As such, the estimation of GHG emissions increase generated by the Project provided above is for informational purposes in accordance with Section 15064.4 of the State CEQA Guidelines. However, as discussed above, the Project's compliance with regulatory programs adopted by CARB, and other state and local agencies is used to evaluate the significance of the Project's GHG emissions. As detailed below, the Project is consistent with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions. The Project also would improve energy grid reliability and support the integration of renewable energy sources, such as wind and solar, reducing the need to operate natural gas power plants and displacing GHG emissions. Therefore, the Project would not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, and impacts would be less than significant.

3.4.2 Project Potential to Conflict With Applicable Plans

The Project's compliance with regulatory programs adopted by CARB, and other state and local agencies is used to evaluate the significance of the Project's GHG emissions. As detailed below, the Project is consistent with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions. The Project also would improve energy grid reliability.

3.4.2.1 Project Potential to Conflict County of Alameda Community Climate Plan.

The County of Alameda adopted a Community Climate Action Plan (CCAP) in 2014 that outlined strategies and measures to reduce the County's contribution to GHG emissions and align with statewide emission targets (i.e., those outlined for 2020 in AB 32). The CCAP identifies six GHG emission reduction strategies: transportation, land use, building energy, water, waste and green infrastructure and a total of 48 reduction measures across all strategies. As previously mentioned, the CCAP was developed to meet the State's 2020 GHG reduction goal. The County is currently working on an updated CCAP that would implement the reduction strategies and measures required to meet the State's 2030 and 2050 GHG reduction targets. An evulations of the Project's potential to conflict with the CCAP's reduction measures are outlined in Table 25.

Table 25. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
Transportation	
T-1 Improve Bicycle near community activity areas.	No conflict. The Project would not obstruct or interfere with County efforts to implement this measure. The proposed project is located in a remote part of the county not near existing community activity areas.
T-2. Develop appropriate bicycle infrastructure for high traffic intersections and corridors.	No conflict. The Project would not obstruct or interfere with County efforts to implement this measure.
T-3. Increase the number of bicycle racks and storage in underserved civic and commercial areas.	No conflict. The Project would not obstruct or interfere with County efforts to implement this measure.
T-4. Enhance pedestrian infrastructure within easy walking distance from community activity areas.	No conflict. The Project would not obstruct or interfere with County efforts to enhance pedestrian infrastructure within easy walking distance from community activity areas.
T-5. Enhance the traffic calming Program to improve pedestrian safety.	Not Applicable. The Project would not obstruct or interfere with County efforts to enhance the traffic calming Program to improve pedestrian safety.
T-6. Improve pedestrian connectivity and route choice in neighborhoods.	No conflict. The Project would not obstruct or interfere with County efforts to improve pedestrian connectivity and route choice in neighborhoods.
T-7. Work with School Districts to develop a School Alternative Transportation Pan by improving/expanding walking, school bus use, safe routes to school program and school bus services.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with School Districts to develop a School Alternative Transportation Pan by improving/expanding walking, school bus use, safe routes to school program and school bus services.
T-8. Conduct a public transit study and implement ridership enhancement programs.	Not Applicable. The Project would not obstruct or interfere with County efforts to conduct a public transit study and implement ridership enhancement programs.

Table 25. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
T-9. Work with AC transit to increase service frequency on select bus routes.	Not Applicable. The Project would not obstruct or interfere with County efforts to implement this measure.
T-10. Provide transit buses with signal prioritization devices to facilitate time effective public service transit.	Not Applicable. The Project would not obstruct or interfere with County efforts to provide transit buses with signal prioritization devices to facilitate time effective public service transit.
T-11. Work with AC Transit to provide transit essential improvements including shelters, route information, benches and lighting.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with AC Transit to provide transit essential improvements including shelters, route information, benches and lighting.
T-12. Work with public transit agencies to better accommodate bicycles.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with public transit agencies to better accommodate bicycles.
T-13. Enhance rideshare infrastructure and services to increase community participation in this important travel mode.	Not Applicable. The Project would not obstruct or interfere with County efforts to enhance rideshare infrastructure and services to increase community participation in this important travel mode.
T-14. Reduce minimum parking requirements for mixed-use, pedestrian and transit-oriented development.	Not Applicable. The Project would not obstruct or interfere with County efforts to implement this measure. <i>The Project is located in a remote location not near other mixed uses or transit developments.</i>
Land Use	
L-1. Facilitate the establishment of mixed-use, pedestrian, and transit-oriented development near major transit stations or transit corridors.	Not Applicable. The Project would not obstruct or interfere with County efforts to implement the establishment of mixed-use, pedestrian, and transit-oriented development near major transit stations or transit corridors.
L-2. Reduce restrictions on second units in single family residential districts near transit stations, major bus route corridors, neighborhood commercial centers and central business districts.	Not Applicable. The Project would not obstruct or interfere with County efforts to reduce restrictions on second units in single family residential districts near transit stations, major bus route corridors, neighborhood commercial centers and central business districts.
L-3. Increase the diversity of uses in neighborhood serving commercial centers.	Not Applicable. The Project would not obstruct or interfere with County efforts to increase the diversity of uses in neighborhood serving commercial centers.
L-4. Improve the vitality of mixed-use neighborhood serving commercial centers through increased density allowances and enhanced design.	Not Applicable. The Project would not obstruct or interfere with County efforts to improve the vitality of mixed-use neighborhood serving commercial centers through increased density allowances and enhanced design.
L-5. Conduct land use and market analyses to identify sites within expansive residential areas that could support new or expanded neighborhood commercial centers.	Not Applicable. The Project would not obstruct or interfere with County effort to conduct land use and market analyses to identify sites within expansive residential areas that could support new or expanded neighborhood commercial centers.

Table 25. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
Building Energy	
E-1. Work with PG&E and Alameda County Cities to accelerate smart grid integration in the community.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with PG&E and Alameda County Cities to accelerate smart grid integration in the community.
E-2. Evaluate the potential for district energy systems in mixed-use and higher density areas of the community, and develop an implementation plan for cost-effective systems.	Not Applicable. The Project would not obstruct or interfere with County efforts to evaluate the potential for district energy systems in mixed-use and higher density areas of the community, and develop an implementation plan for cost-effective systems.
E-3. Develop a comprehensive outreach program to facilitate voluntary home energy efficiency improvements.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a comprehensive outreach program to facilitate voluntary home energy efficiency improvements.
E-4. Identify and develop low-cost financing products and programs that encourage investments in energy efficiency residential buildings.	Not Applicable. The Project would not obstruct or interfere with County efforts to identify and develop low-cost financing products and programs that encourage investments in energy efficiency residential buildings.
E-5. Expand outreach to low-income homeowners in order to encourage participation in federally funded energy efficiency and weatherization programs.	Not Applicable. The Project would not obstruct or interfere with County efforts to expand outreach to low-income homeowners in order to encourage participation in federally funded energy efficiency and weatherization programs.
E-6. Identify and implement opportunities to improve efficiency of rental units.	Not Applicable. The Project would not obstruct or interfere with County efforts to identify and implement opportunities to improve efficiency of rental units.
E-7. Develop and implement an outreach and financial assistance program that encourages businesses to invest in efficiency improvements.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop and implement an outreach and financial assistance program that encourages businesses to invest in efficiency improvements.
E-8. Renew the County Green Building Ordinance.	Not Applicable. The Project would not obstruct or interfere with County efforts to renew the County Green Building Ordinance.
E-9. Provide incentives, such as priority permitting for buildings that exceed Title 24 standards for energy efficiency by 30%.	Not Applicable. The Project would not obstruct or interfere with County efforts to provide incentives, such as priority permitting for buildings that exceed Title 24 standards for energy efficiency by 30%.
E-10. Require or provide incentives for new construction to use building materials containing recycled content.	Not Applicable. The Project would not obstruct or interfere with County efforts to require or provide incentives for new construction to use building materials containing recycled content.
E-11. Require new commercial parking lots with over 200 spaces to mitigate heat gain through the use of shade trees, solar arrays or cool pavement.	Not Applicable. The Project would not obstruct or interfere with County efforts to require new commercial parking lots with over 200 spaces to mitigate heat gain through the use of shade trees, solar arrays or cool pavement.

Table 25. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
E-12. Require all new construction and major renovation of Multi-unit buildings to be sub-metered to enable each individual unit to monitor energy consumption.	Not Applicable. The Project would not obstruct or interfere with County efforts to require all new construction and major renovation of Multi-unit buildings to be sub-metered to enable each individual unit to monitor energy consumption.
E-13. Establish solar empowerment districts that remove barriers to and facilitate installation of solar PV programs on eligible commercial and industrial buildings and parking lots.	Not Applicable. The Project would not obstruct or interfere with County efforts to establish solar empowerment districts that remove barriers to and facilitate installation of solar PV programs on eligible commercial and industrial buildings and parking lots.
E-14. Facilitate the installation of solar hot water heating systems on large commercial buildings.	Not Applicable. The Project would not obstruct or interfere with County efforts to facilitate the installation of solar hot water heating systems on large commercial buildings.
E-15. Develop a comprehensive residential renewable energy program that provides outreach, financing and other forms of assistance.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a comprehensive residential renewable energy program that provides outreach, financing and other forms of assistance.
E-16. Develop a green jobs program for the unincorporated areas of Alameda County.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a green jobs program for the unincorporated areas of Alameda County.
Water	
WT-1 Encourage residents and businesses to conserve water in existing buildings and landscapes.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop encourage residents and businesses to conserve water in existing buildings and landscapes.
WT-2. Require new landscape projects to reduce outdoor potable water use by 40 percent.	Not Applicable. The Project would not obstruct or interfere with County efforts to require new landscape projects to reduce outdoor potable water use by 40 percent.
WT-3. Adopt an ordinance that allows the installation and use of grey water systems for subsurface irrigation.	Not Applicable. The Project would not obstruct or interfere with County efforts to adopt an ordinance that allows the installation and use of grey water systems for subsurface irrigation.
WT-4. Work with EBMUD and Zone 7 to redesign water bill format to encourage water conservation in residential and commercial users.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with EBMUD and Zone 7 to redesign water bill format to encourage water conservation in residential and commercial users.
Waste	
WS-1. Increase solid waste reduction and diversion to 90 percent by 2030.	Not Applicable. The Project would not obstruct or interfere with County efforts to increase solid waste reduction and diversion to 90 percent by 2030.
WS-2. Strengthen the construction and demolition debris management ordinance.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with strengthen the construction and demolition debris management ordinance.

Table 25. Project Potential to Conflict with the County of Alameda Community Climate Action Plan

Climate Action Areas	Potential to Conflict
WS-3. Develop a food waste collection program and adopt an ordinance that requires all household and commercial food wastes and food-soled paper to be placed in organic carts.	Not Applicable. The Project would not obstruct or interfere with County efforts to develop a food waste collection program and adopt an ordinance that requires all household and commercial food wastes and food-soled paper to be placed in organic carts.
WS-4. Work with Stopwaste.Org, Alameda County cities, and other organizations to urge adoption of State and federal legislation that requires extended producer responsibility, and improves the recyclability of products and packaging.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with Stopwaste.Org, Alameda County cities, and other organizations to urge adoption of State and federal legislation that requires extended producer responsibility, and improves the recyclability of products and packaging.
Green Infrastructure	
G-1 Expand the urban forest in order to sequester carbon and reduce building energy consumption.	Not Applicable. The Project would not obstruct or interfere with County efforts to expand the urban forest in order to sequester carbon and reduce building energy consumption.
G-2. Include carbon sequestration as an objective within county-led natural area restoration projects.	Not Applicable. The Project would not obstruct or interfere with County efforts to include carbon sequestration as an objective within county-led natural area restoration projects.
G-3. Establish a local community garden program to increase local food security and provide local recreation amenities.	Not Applicable. The Project would not obstruct or interfere with County efforts to establish a local community garden program to increase local food security and provide local recreation amenities.
G-4. Work with local farmers and agricultural non-profits to develop urban edge farming opportunities in the unincorporated county.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with local farmers and agricultural non-profits to develop urban edge farming opportunities in the unincorporated county.
G-5. Work with local organizations to establish farmers' market sites in the unincorporated county.	Not Applicable. The Project would not obstruct or interfere with County efforts to work with local organizations to establish farmers' market sites in the unincorporated county.

3.4.2.1 Project Potential to Conflict with BAAQMD's Project Design Element Requirements

On April 20, 2022, the BAAQMD Board of Directors held a public meeting and adopted new recommended CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans (Thresholds for Land Use Projects). BAAQMD recommends these thresholds only for projects that have Notices of Preparation issued after April 20, 2022. Table 26 demonstrates the Project's potential to conflict with the BAAQMD's Project Design Elements.

Table 26. Project's Potential to conflict with the BAAQMD's project design elements

Project Design Elements	Potential to Conflict
Buildings	
The Project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).	No conflict. The project is an industrial scale battery energy storage project and would not include any natural gas infrastructure.
The project will not result in any wasteful, inefficient or unnecessary electric usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.	No conflict. The Project is an industrial battery energy storage project and would assist the State in meeting its long-term renewable energy goals. The Project would not result in a wasteful or inefficient or unnecessary.
Transportation	
Achieve compliance with electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.	No conflict. The proposed Project includes the construction and operation of an industrial scale battery energy storage project. The Project would only include twenty fulltime onsite staff and would not be subject to comply with CalGreen Tier-2 electric vehicle parking requirements.
Achieve a reduction project generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA.	No conflict. As stated in the Transportation Impact Assessment, the Proposed Project would not have a significant impact on VMT per SB 743. OPR has identified a screening threshold of 110 trips per day for evaluation of VMT impacts. The Project would generate fewer than 110 trips per day.

Source: BAAQMD 2023.

As shown in Table 23, the Project would not conflict with BAAQMD's required Project Design Measures. In addition, the Project would assist the State in meeting its long term renewable energy goals by assisting the facilitating the use of more wind and solar energy outside of standard generation windows.

3.4.2.2 Project Potential to Conflict with CARB's 2017 Scoping Plan Update

The 2017 Scoping Plan Update reflects the 2030 target of a 40% reduction below 1990 levels codified by SB 32. Table 27 evaluates the Project's potential to conflict with the 2017 Scoping Plan recommended actions.

Table 27. Project Potential to Conflict with 2017 Scoping Plan

Recommended Action Summary	Lead Agencies	Potential to Conflict
Implement SB 350 by 2030 Increase Renewable Portfolio Standard	CPUC, CEC, CARB	No conflict. This action is directed towards policymakers and would not be directly applicable to the Project. Nonetheless, the Project would improve energy grid reliability and

Table 27. Project Potential to Conflict with 2017 Scoping Plan

Recommended Action Summary	Lead Agencies	Potential to Conflict
- Establish annual targets for statewide energy efficiency - Reduce GHG emissions in the electricity sector		support the integration of additional intermittent renewable energy sources, such as wind and solar, reducing the need to operate natural gas power plants.
Implement Mobile Source Strategy (Cleaner Technology and Fuels) - Increase zero emission and plug-in hybrid electric vehicles - Increase GHG stringency on light-duty vehicles beyond Advanced Clean Cars - Medium- and heavy-duty GHG Phase 2 - Innovative Clean Transit - Last Mile Delivery - Further reduce VMT through SB 375 and regional Sustainable Communities Strategy	CARB, CalSTA, SGC, CalTrans, CEC, OPR, Local agencies	No conflict. This action is directed towards mobile sources and would not be directly applicable to the Project.
Increase stringency of SB 375 Sustainable Communities Strategy (2035 targets)	CARB	No conflict. This action is directed towards policymakers and would not be directly applicable to the Project.
Adjust performance measures used to select and design transportation facilities by 2019	CalSTA and SGC, OPR, CARB, GoBiz, IBank, DOF, CTC, Caltrans	No conflict. The action is directed towards CARB and Caltrans and the Project would not impede implementation.
Develop pricing policies to support low-GHG transportation (e.g., low-emission vehicle zones for heavy-duty, road user, parking pricing, transit discounts) by 2019	CalSTA, Caltrans, CTC, OPR/SGC, CARB	No conflict. This action is directed towards policymakers and would not be directly applicable to the Project.
Implement California Sustainable Freight Action Plan	CalSTA, CalEPA, CNRA, CARB, CalTrans, CEC, GoBiz	No conflict The Sustainable Freight Action Plan provides a recommendation on a high-level vision and broad direction to the Governor to consider for State agencies to utilize when developing specific investments, policies, and programs related to the freight transport system that serves our State's transportation, environmental, and economic interests.
Adopt a Low Carbon Fuel Standard with a carbon intensity reduction of 18%	CARB	No conflict This action is directed towards CARB and would not be directly applicable to the Project. However, emissions associated with Project vehicle travel would benefit

Table 27. Project Potential to Conflict with 2017 Scoping Plan

Recommended Action Summary	Lead Agencies	Potential to Conflict
		from reductions associated with the Low Carbon Fuel Standard.
Implement the Short-Lived Climate Pollutant Strategy by 2030	CARB, CalRecycle, CDFA, SWRCB, Local air districts	No conflict. The Project would be required to comply with the Short-Lived Climate Pollutant Strategy to the extent it is applicable.
Develop regulations and programs to support organic waste landfill reduction goals in the Short-Lived Climate Pollutant Strategy and SB 1383 by 2019	CARB, CalRecycle, CDFA, SWRCB, Local air districts	No conflict. This action is not within the purview of this Project.
Implement the post-2020 Cap-and-Trade Program with declining annual caps	CARB	No conflict. The Project is not subject to the California Cap-and-Trade Program.
Develop Integrated Natural and Working Lands Implementation Plan to secure California's land base as a net carbon sink by 2018	CNRA and departments within, CDFA, CalEPA, CARB	No conflict. This action is not within the purview of this Project.
Establish a carbon accounting framework for natural and working lands as described in SB 859 by 2018	CARB	No conflict. This action is not within the purview of this Project.
Implement Forest Carbon Plan	CNRA, CAL FIRE, CalEPA and departments within	No conflict. This action is not within the purview of this Project.
Identify and expand funding and financing mechanisms to support GHG reductions across all sectors.	State Agencies & Local Agencies	No conflict. This action is not within the purview of this Project.

Source: CARB 2017.

Notes: CalEPA = California Environmental Protection Agency; CAL FIRE = California Department of Forestry and Fire Protection; CalRecycle = California Department of Resources Recycling and Recovery; CalSTA = California State Transportation Agency; CalTrans = California Department of Transportation; CARB = California Air Resources Board; CDFA = California Department of Food and Agriculture; CEC = California Energy Commission; CNRA = California Natural Resources Agency; CPUC = California Public Utilities Commission; CTC = California Transportation Commission; DOF = Department of Finance; GHG = greenhouse gas; GoBiz = Governor's Office of Business and Economic Development; IBank = California Infrastructure Economic Development Bank; OPR = Governor's Office of Planning and Research; SB = Senate Bill; SGC = Strategic Growth Council; I- = Interstate.

As shown in Table 24, the Project would not conflict with the 2017 Scoping Plan. In addition, the Project would not impede the state and authoritative lead agencies from implementing incentives or regulations to achieve the 2017 Scoping Plan goals.

3.4.2.2 Project Potential to Conflict with CARB's 2022 Scoping Plan for Achieving Carbon Neutrality

The 2022 *Scoping Plan for Achieving Carbon Neutrality* reflects the 2030 target of a 40% reduction below 1990 emission levels codified by SB 32, and the 2045 target of 85% reduction below 1990 emissions levels and carbon neutrality codified by AB 1279. The 2022 Scoping Plan builds upon and accelerates programs currently in place, including moving to zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings;

reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; and displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines) (CARB 2022b). Many of the measures and programs included in the Scoping Plan would result in the reduction of Project-related GHG emissions with no action required at the Project-level. Table 28 evaluates the Project's potential to conflict with the measures from the 2022 Scoping Plan that are relevant and applicable to the Project.

Table 28. Project Potential to Conflict with 2022 Scoping Plan

Sector	Action	Potential to Conflict
GHG Emissions Reductions Relative to the SB 32 Target	40% below 1990 levels by 2030	No conflict. While the SB 32 GHG emissions reduction target is not an Action that is analyzed independently, it is included in Table 2-1 of the 2022 Scoping Plan for reference. The Project would not obstruct or interfere with agency efforts to meet the SB 32 reduction goal. Specifically, the Project would allow for increased energy storage from intermittent renewable energy sources, thereby increasing grid reliability and increasing the opportunity for renewable energy development.
Smart Growth/VMT	VMT per capita reduced 25% below 2019 levels by 2030, and 30% below 2019 levels by 2045	No conflict. The Project would not obstruct or interfere with agency efforts to meet this regional VMT reduction goal, including through implementation of SB 375. As discussed earlier, Project would be consistent with the Plan Bay Area 2050 Regional Plan, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in Bay Area region pursuant to SB 375.
Light-duty Vehicle (LDV) Zero Emission Vehicles (ZEVs)	100% of LDV sales are ZEV by 2035	No conflict. As this action pertains to LDV sales within California, the Project would not obstruct or interfere with its implementation.
Truck ZEVs	100% of medium-duty vehicle (MDV)/heavy-duty vehicle (HDV) sales are ZEV by 2040	No conflict. As this action pertains to MDV and HDV sales within California, the Project would not obstruct or interfere with its implementation.

Table 28. Project Potential to Conflict with 2022 Scoping Plan

Sector	Action	Potential to Conflict
Electricity Generation	Sector GHG target of 38 million metric tons of carbon dioxide equivalent (MMTCO_{2e}) in 2030 and 30 MMTCO_{2e} in 2035 Retail sales load coverage 20 gigawatts (GW) of offshore wind by 2045 Meet increased demand for electrification without new fossil gas-fired resources	No conflict. As this Action pertains to the statewide procurement of renewable energy, the Project would not obstruct or interfere with its implementation. However, the Project would support increased usage of renewable electricity by allowing for a more reliable local electric grid and reducing reliance on natural gas power plants.
New Residential and Commercial Buildings	All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030	No conflict. The Project would not obstruct or interfere with CARB's efforts to meet the all-electric appliance and heat pump goals. The Project's appliances and heating, ventilation, and air conditioning (HVAC) system would be electrically powered.
Construction Equipment	25% of energy demand electrified by 2030 and 75% electrified by 2045	No conflict. As this Action pertains to the electrification of off-road equipment across California, the Project would not obstruct or interfere with its implementation.
Low Carbon Fuels for Transportation	Biomass supply is used to produce conventional and advanced biofuels, as well as hydrogen	No conflict. The Project would not obstruct or interfere with CARB's efforts to increase the provision of low carbon fuels for transportation. The development and use of biofuels in trucks and automobiles would occur at the state and regional level.
Low Carbon Fuels for Buildings and Industry	In 2030s biomethane blended in pipeline Renewable hydrogen blended in fossil gas pipeline at 7% energy (~20% by volume), ramping up between 2030 and 2040 In 2030s, dedicated hydrogen pipelines constructed to serve certain industrial clusters	No conflict. The Project would not obstruct or interfere with CARB's efforts to increase the provision of low carbon fuels for use in buildings and industry. The blending of biomethane and use of renewable hydrogen in existing natural gas pipelines would happen at the scale of the utility provider and without action required by the Project.

Table 28. Project Potential to Conflict with 2022 Scoping Plan

Sector	Action	Potential to Conflict
High GWP Potential Emissions	Low GWP refrigerants introduced as building electrification increases, mitigating HFC emissions	No conflict. The Project would not obstruct or interfere with agency efforts to introduce low GWP refrigerants. The State has established a prohibition on the sale or distribution of bulk HFCs identified as having a high GWP through SB 1206.

As shown in Table 28, the Project would not conflict with the 2022 Scoping Plan. In addition, the Project would not impede the state and authoritative lead agencies from implementing incentives or regulations to achieve the 2022 Scoping Plan goals. Based on these considerations, the Project would not potentially conflict with plans, policies, or regulations adopted for the purpose of reducing GHG emissions and would result in a less-than-significant impact.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Potentia-Viridi BESS
Construction Start Date	12/1/2026
Operational Year	2029
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	30.0
Location	37.71347704476145, -121.57283292059958
County	Alameda
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1892
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	1.00	1000sqft	0.02	1,000	0.00	—	—	—

Other Asphalt Surfaces	50.0	Acre	50.0	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20.4	annual days of extreme heat
Extreme Precipitation	1.45	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	48.5	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	48.5
AQ-PM	12.6
AQ-DPM	7.08
Drinking Water	66.3
Lead Risk Housing	6.48
Pesticides	59.1
Toxic Releases	20.3
Traffic	66.2
Effect Indicators	—
CleanUp Sites	94.2
Groundwater	93.1
Haz Waste Facilities/Generators	100
Impaired Water Bodies	94.6
Solid Waste	99.8
Sensitive Population	—
Asthma	21.6
Cardio-vascular	29.6
Low Birth Weights	30.2
Socioeconomic Factor Indicators	—
Education	19.3
Housing	5.82
Linguistic	27.3
Poverty	2.20
Unemployment	40.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	93.28884897
Employed	75.70896959
Median HI	96.04773515
Education	—
Bachelor's or higher	79.22494546
High school enrollment	100
Preschool enrollment	65.18670602
Transportation	—
Auto Access	95.6242782
Active commuting	53.47106378
Social	—
2-parent households	56.91004748
Voting	75.59348133
Neighborhood	—
Alcohol availability	65.35352239
Park access	31.47696651
Retail density	12.8576928
Supermarket access	2.399589375
Tree canopy	43.16694469
Housing	—
Homeownership	86.3852175
Housing habitability	90.33748236
Low-inc homeowner severe housing cost burden	94.57205184
Low-inc renter severe housing cost burden	57.85961761
Uncrowded housing	67.80443988
Health Outcomes	—

Insured adults	91.7875016
Arthritis	82.7
Asthma ER Admissions	67.4
High Blood Pressure	96.3
Cancer (excluding skin)	52.2
Asthma	72.9
Coronary Heart Disease	93.8
Chronic Obstructive Pulmonary Disease	89.8
Diagnosed Diabetes	93.4
Life Expectancy at Birth	40.2
Cognitively Disabled	94.6
Physically Disabled	92.6
Heart Attack ER Admissions	47.6
Mental Health Not Good	76.1
Chronic Kidney Disease	93.4
Obesity	75.0
Pedestrian Injuries	74.0
Physical Health Not Good	88.1
Stroke	93.8
Health Risk Behaviors	—
Binge Drinking	12.7
Current Smoker	74.7
No Leisure Time for Physical Activity	88.8
Climate Change Exposures	—
Wildfire Risk	0.2
SLR Inundation Area	0.0
Children	56.6
Elderly	63.3

English Speaking	65.3
Foreign-born	33.9
Outdoor Workers	54.4
Climate Change Adaptive Capacity	—
Impervious Surface Cover	81.3
Traffic Density	46.7
Traffic Access	47.6
Other Indices	—
Hardship	7.6
Other Decision Support	—
2016 Voting	69.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	29.0
Healthy Places Index Score for Project Location (b)	90.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Based on Information provided by the project applicant.
Construction: Off-Road Equipment	Based on Information provided by the project applicant.
Construction: Trips and VMT	Based on Information provided by the project applicant.
Operations: Vehicle Data	Trip generation rate based on 20 employees and weekly truck trips
Operations: Energy Use	Energy demand provided by the project applicant.
Operations: Off-Road Equipment	off-road equipment included to account for any future modifications to the project site.
Operations: Emergency Generators and Fire Pumps	Emergency Generator information provided by the project applicant.
Construction: Dust From Material Movement	Based on Information provided by the project applicant.
Operations: Generators + Pumps EF	PM emission data based on Emissions data in Manufacture's Specification Sheet and tier 4 emissions standards

Source: CARB 2015c

Notes:

ppmv = parts per million by volume

µg/m³ = micrograms per cubic meter

The 1.5 µg/m³ federal quarterly lead standard applied until 2008; 0.15 µg/m³ rolling 3-month average thereafter

For gases, µg/m³ calculated from ppmv based on molecular weight and standard conditions:

Standard Temperature 25 °C for ambient air monitoring

Standard Molar Volume 24.465 liter/g-mole for ambient air monitoring

The thresholds of significance for Ambient Air Quality are based on the California Ambient Air Quality Standard (CAAQS) and National Ambient Air Quality Standard (NAAQS). A project would be considered to have a significant impact if its emissions are predicted to cause or contribute to a violation of an ambient air quality standard by exceeding any California Ambient Air Quality Standard (CAAQS) / National Ambient Air Quality Standard (NAAQS).

Conversion Chart - Based on State/Federal AAQS

Potentia-Viridi BESS AAQA Detailed Report

Table of Contents

- 1. Basic Project Information
 - 1.1. Basic Project Information
 - 1.2. Land Use Types
 - 1.3. User-Selected Emission Reduction Measures by Emissions Sector
- 2. Emissions Summary
 - 2.1. Construction Emissions Compared Against Thresholds
 - 2.2. Construction Emissions by Year, Unmitigated
 - 2.3. Construction Emissions by Year, Mitigated
- 3. Construction Emissions Details
 - 3.1. Decommissioning (2050) - Unmitigated
 - 3.2. Decommissioning (2050) - Mitigated
 - 3.3. Site Preparation (2027) - Unmitigated
 - 3.4. Site Preparation (2027) - Mitigated
 - 3.5. Grading (2027) - Unmitigated
 - 3.6. Grading (2027) - Mitigated

- 3.7. BESS Installation (2027) - Unmitigated
- 3.8. BESS Installation (2027) - Mitigated
- 3.9. BESS Installation (2028) - Unmitigated
- 3.10. BESS Installation (2028) - Mitigated
- 3.11. PV Substation Installation (2027) - Unmitigated
- 3.12. PV Substation Installation (2027) - Mitigated
- 3.13. PV Substation Installation (2028) - Unmitigated
- 3.14. PV Substation Installation (2028) - Mitigated
- 3.15. PG&E Substation Upgrades (2028) - Unmitigated
- 3.16. PG&E Substation Upgrades (2028) - Mitigated
- 3.17. BESS Foundations (2027) - Unmitigated
- 3.18. BESS Foundations (2027) - Mitigated
- 3.19. Testing and Commissioning (2028) - Unmitigated
- 3.20. Testing and Commissioning (2028) - Mitigated
- 3.21. Gen-Tie Stringing (2027) - Unmitigated
- 3.22. Gen-Tie Stringing (2027) - Mitigated
- 3.23. Gen-tie Foundation (2027) - Unmitigated
- 3.24. Gen-tie Foundation (2027) - Mitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

- 4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated
- 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated
- 4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated
- 4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated
- 4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated
- 4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

- 5.2.1. Unmitigated
- 5.2.2. Mitigated

5.3. Construction Vehicles

- 5.3.1. Unmitigated
- 5.3.2. Mitigated

5.4. Vehicles

- 5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Potentia-Viridi BESS AAQA
Construction Start Date	12/1/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.00
Precipitation (days)	30.0
Location	37.71347704476145, -121.57283292059958
County	Alameda
City	Unincorporated
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1892
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	1.00	1000sqft	0.02	1,000	0.00	—	—	—

Other Asphalt Surfaces	50.0	Acre	50.0	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit

Temperature and Extreme Heat	20.4	annual days of extreme heat
Extreme Precipitation	1.45	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	48.5	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	1	1	1	2
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	48.5
AQ-PM	12.6
AQ-DPM	7.08
Drinking Water	66.3
Lead Risk Housing	6.48
Pesticides	59.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	29.0
Healthy Places Index Score for Project Location (b)	90.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
 b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.
