Energy Storage project in San Juan Capistrano

The location for this energy storage project will put many lives at risk in the event of a fire or toxic material release. It is very close to a major freeway, a major passenger and freight rail line, and adjacent to a creek that drains to the ocean at a popular swimming beach and boat harbor only 5 miles away. I object to this project because of the many families and businesses that would be affected by their proximity to this facility. There must be many other suitable sites for this type of facility.
