Health concerns

As a resident of a community that exists downstream from the proposed build site, I am concerned about increased heavy metal runoff and the effect of utilizing local water sources for cooling the facility and its contents. There is certainly better places to construct such a facility other than this location. The area chosen is also documented to have experienced landslides in the past which may contribute to malfunction and damage to the surrounding are regardless of shoring or other construction.

The contribution of clean energy to the area would obviously have vastly positive effects, however the specific location for this facility would certainly add to the overall pollution in the local environment/ waterways. I would suggest that the site be moved inland to a low lying valley area or Beverly Hills specifically so that communities that do not contribute largely to farming and agriculture are not impacted by this poor decision.

Consider revising the location choice to avoid community backlash.
