Annual Data

- Instructions:
1. Enter the electricity portfolio name in cell Q25 and additional electricity portfolio names as needed in cells P25-V25.
 2. Enter information about all power procurements and retail sales. Insert additional rows as needed. All fields in white should be filled out. Fields in grey auto-populate as needed and should not be filled out.
 3. For all specified purchases, enter the facility name, fuel type, state or province, WREGIS ID of REC source, RPS ID of REC source, EIA ID of delivered energy, gross MWhs procured, and specified resales MWhs.
 4. For firm-ed-&-shaped procurements specifically, enter all fields from step 3. Additionally, enter the EIA ID of the substitute power in the "EIA ID of delivered energy" field and select "Yes" in the "Firm-ed-&-Shaped Resource?" field. If the associated GHG emissions are eligible for firm-ed-&-shaped grandfathering, select "Yes" in the relevant field.
 5. Proxy EIA IDs for unspecified power and specified system mixes from asset-controlling suppliers have been provided. Enter "Unspecified Power", "BPA", or "Tacoma Power" as applicable.
 6. Proxy EIA IDs for aggregated reporting of WAPA CVP or PCA resources: Enter "CVP", "PCA Solar", "PCA Wind", "PCA Eligible Hydro", or "PCA Large Hydro" as applicable.
 7. Procurements of unspecified power must not be entered as line items below; unspecified power will be calculated automatically in the individual electricity portfolio tables to the right after all specified resources have been allocated.
 8. Allocate net MWhs procured to each electricity portfolio until the loads are balanced across each portfolio. If the total Net MWhs Procured exceeds the total retail sales of all portfolios, allocate only enough MWh to meet the retail sales of each portfolio.
