Proposed BESS site in San Juan Capistrano

As a resident of Laguna Niguel near the proposed BESS site, my family and I strongly oppose this project. The well known risk of fire from lithium batteries would quickly spread to the adjacent hill and the homes that are built on top of the hill. Such a fire, would quickly spread to the densely populated city of Laguna Niguel with the danger of extensive loss of life and property. This kind of projects are better suited in areas away from population centers such as the CA desert.
