Docket Number: 24-OPT-02

Should NEVER be allowed this close to people and animals!

The fact that Compass Energy is attempting to install this dangerous facility, putting home owners, students, animals, land, structures, and nature in harms way, shows they have no concern for those of us who live near this site. It is blatantly obvious that money is their only concern when it comes to this facility and how much they can profit from it. As someone who has lived nearby for decades, I have seen many fires in this area, and the arrogance of this company to say that they would be able to control a fire situation is reckless and careless. Access to this site would be very difficult at best, should a disaster happen, and It will be at our expense should a tragedy occur..

For this reason, I oppose the installation of Compass Energy Storage Project and pray that the State of California will do the right thing and deny any application for the installation of lithium battery storage facilities near neighborhoods, businesses, and schools, now and in the future.

Sincerely,
Laura Tarbutton
