Can you send me the actual floorplan of the new facility

The artistic drawing of the planned facility appears to be much smaller than the one necessary to produce the 250 megawatts of power. I understand this was an artistic rendering and not intended to be the floorplan of the facility, but I request to know the number of containers that are planned. Counting the number of containers (I have attached a pdf showing the containers highlighted in red). There are only 154 megapacks to be installed initially and 22 "Future Megapacks". A total of 176 megapacks accounted for in the drawing.

Our volunteers have calculated at least 316- 320 would be necessary (almost twice the size). We were told in our initial meeting with Engie representatives 1100 containers were planned. This meeting included our entire Homeowners Association Board, our Management representative, two volunteers at the Peace Farm and the manager of the Center for Natural Lands Management.

Can you tell us how many containers are planned? Can you publish or email me the official floorplan showing the spacing between the containers? We were told there was a separation of 8 feet. That could have been an estimate.

Is there one air-conditioning unit per container? That is what we were told. The artist rendering appears to show shared air-conditioning units.

We would like an actual to scale drawing or a pdf of same. A link would be fine.
Thank you!

Regards,

Cathleen Pryor

President
