economic and environmental mistake

I can not fathom a justifiable reason to benefit the public or the state of California for site location of the proposed Battery storage facility in San Juan Capistrano/ Laguna Niguel

Economically:

This land is some of the most valuable open space in the country. There is no more development space for housing or affordable housing in south orange county. The wasted opportunity of the State of California to generate property tax income as well as other sources of income is completely wasted by building this facility in this location Not to mention the sociological impact given the housing supply shortages.

Environmentally: Given the fact that these facility have a high likelihood for fire, the high heat at which the fire burns, the Red Zone brush surrounding the area, the toxic runoff that would spill into the San Juan creek and therefore Doheny state beach/ dana point harbor

I could not imagine a worse location for such a hazardous facility.

Furthermore the economic impact of a fire in the area would threaten hundreds of homes, several local schools, churches and businesses. Plus the main artery of the 5 fwy and 73 hwy.

This facility would be better located in a open space that isnt surrounded by homes, businesses freeways waterways, dry brush, churches, and schools. This project puts lives and property at risk unnecessarily
