Company Energy Storage Project

We are writing to express in no uncertain terms that the planned battery farm in the heavily populated area close to the interstate 5 is a non-starter and **MUST BE STOPPED**.

The push back from the community is intensifying and started with the first meeting several months ago when many of us became aware of the plan to store volatile batteries in the area close to several retail restaurants and the population in general. In an area with only one exit point.

The community continues to express their displeasure as evidenced by the huge number of neighbors who commented at the open forum on June 3. They DONÂ€T want a battery farm anywhere close especially as we struggle with all the fire issues. Why would you even consider this project in such a densely populated area? Why not go East where there is much undeveloped land for this project?

We will continue to mobilize to stop this plan and ask for common sense to prevail and move this battery farm project out of the area and much farther away from San Clemente.

Roger and Christine Jolicoeur
