One of the dumbest ideas I've ever heard

I've been a resident of Orange County my whole life. This proposed center is less than 10 minutes from my house. It is a horrible idea as it's next to neighborhoods. It will also affect the environment if there is a fire. It is very close to a stream which leads to the ocean. Dana point ocean is very close and Dana is the only sanctuary city in both north and South America.. something like polluting our ocean would definitely jeopardize dana points status of having that sanctuary if the water was to become polluted. This would affect not only the animals, but also the economy as Dana has a huge tourism industry.

I also find it insulting that this energy company bypassed the city of San Juan and went to the state. This whole thing is insulting from saddleback selling a land and not talking to anybody.
