Docket Number: 24-OPT-02

Voicing opposition to Energy storage project

Opposition comments:

hazardous material affect air & water contamination potential

high fire area potential

special fire fighting training, materials & equipment required if an event occurs.

high potential harm & contamination to adjacent close proximity residential areas.

potential financial impact of local insurance rates, property values and area quality of life perception.

Alternatives:

build in a non populous area with less contamination & fire impact issues

Alternate reinstatement of local nuclear power plant for longer term reliable and safer power support availability.
