## **Please Don't**

I am strongly opposed to this giant Lithium Ion Battery storage system placed in the heart of rural Acton. It industrializes our rural community. It will completely and forever change the look and feel of the special place that is Acton.

Worse, of course, is this dated technology is dangerous Moss Landing, anyone?). Yes, they say this new system is safer. But that's what they said about previous Lithium Ion disasters. safer tech is on the way. Wait! These battery storage units need to be away from people and fire zones. This plan puts a potential thermal runaway disaster in a high wind, high fire risk area. It will also sit right next to homes and literally next to main transportation arteries, including a key highway (Soledad Canyon Road), a key rail line (Metrolink), and the 14 Freeway. I can't think of a worse location as relates to safety. We learned from other Lithium Ion disasters that any failure will release toxic fumes for miles. And you want to put this next to my home. Please...No.
