Objectionto battery storage

I am a long time resident of Acton and have a very real objection to any type of battery storage facility in our high fire zone. These batteries are known to spontaneously combust. There is no benefit to any of the residents in the community. It is not zoned for battery storage. An environmental report will show this area is not environmentally stable to support any type of industrial use. There is absolutely no reason to put a battery storage in this type of area. It is dangerous to firefighters, which do not have adequate resources to fight these fires as the batteries cannot be put out, they have to burn out. They also give off highly toxic fumes which are deadly to humans, animals/livestock (this is a rural area with lots of animals and livestock) This would be like having a nuclear power plant in Acton. The only reason any sound minded person would authorize this is if they were making a lot of money to sacrifice a whole town for personal gain.
