25-OPT-02 - CORRECTED VERSION - NEGATIVE COMMENTS PRAIRIE SONG RELIABILITY PROJECT

PLEASE DO NOT APPROVE this project for our rural community of Acton. It will endanger residents due to the batteries proposed for use in this project, which are toxic and will emit toxins when burning, and the developer is very likely to get sued because of negative, and potentially life threatening, health effects from these toxins. There are many open areas further north that would avoid the project being located near the CA 14 freeway, which is very heavily traveled and is crippling to Antelope Valley communities when closed. Placing it further north would also prevent it being in close proximity to a drinking water source, Palmdale Lake, which provides water to the community of Palmdale. Contamination of this precious water source with toxins from this project will prevent the agency treating the water from delivering a safe and clean water supply to its customers leaving an entire community without water. Acton is considered a high fire zone, so its not a matter of if, but when, this project catches on fire. Also, there is no guarantee that the power generated in that location will stay in Acton. So, again, please do not approve this project unless it is moved far away from Acton to a much less populated location. Thank you for your consideration.
