Battery Energy Storage Systems

Proposed lithium-ion battery storage is what I can assume is needed.

It will cover 70 Acres with 2035 battery enclosures. What I don't understand is why so close to homes and business that can be impacted if any of these structures catches fire or impaired. Impacted will be the 14 freeway and metrolink along with other train itineraries.

It will devastate commuting to and from.

If a fire is detected it will endanger residents using Lithium Iron Phosphate batteries which are toxic when burning. They will be developed in a very high hazard severity zone along with the San Andreas Fault.

We are in a Fire Zone and have yearly inspections from the fire department. We are then charged on our property taxes.

Homeowner's insurance premiums will skyrocket or be unattainable.

If we sell our house it will devalue the asking price as we will have to note the presence of the location of the battery storage units. Just like the High Speed Rail that is coming.

We then have to sell to a developer just like some of the retired or low income residents of the Palisades Fire.

We are small horse community that has had to overcome being industrialized.

We in Acton wish someone would listen to us as our voices are nullified for what.

The companies that are implanting these projects are looking at financial gain being so close to the railroad and the 14 freeway.

Thank You

Mike Granillo
