Show Us You Love California

Subject: Agenda Item 9.d

Dear California Energy Commission,

Regarding agenda item 9.d: before committing another \$3 million of taxpayer money to this project, please first disclose and review the findings of the existing study.

Around the world, nations are recognizing that so-called “green” energy from wind turbines is neither truly green nor sustainable. Years of operation and mounting studies have revealed destructive environmental impacts and repeated failures to provide viable, affordable energy. In Europe, where wind energy has been widely tested, opposition is growing rapidly—both offshore and on land.

Here in California, citizens are also beginning to say no. We do not want Morro Bay or Port San Luis to be turned into experimental sites for unproven technologies. If pursued, this project risks leaving behind massive, expensive, abandoned infrastructure—our coastline turned into an industrial graveyard. The state is already spending billions on a vision that has yet to show practical results, and the CEC appears to be promoting it without sufficient scrutiny.

It takes courage to question momentum and act in the long-term interest of Californians. We urge you to review the evidence, acknowledge the risks, and recognize that this is not the right path forward. Please do the right thing and reject this proposal before more taxpayer dollars are wasted.

Respectfully,
Hope Mayer
Morro Bay
