Battery Energy Storage System Plant - San Juan Capistrano

Dear Sirs,

I respectfully request that the proposed Battery Energy Storage System Plant (BESS) in San Juan Capistrano be carefully evaluated and rejected.

The proposed plant's proximity to the 5 Freeway, residential housing, open nature space and its danger to Southern Orange County's Air Quality render this project a dangerous proposition.

Its health danger to Southern California residents, the proposed plant's risk of fires that cannot be contained render this project unfeasible in this populated area potentially cutting off the transit of goods via the 5 Freeway from and to San Diego county.

US Government agencies and the City of San Juan Capistrano will expose themselves to huge air quality health care related and water contamination law suits as a result of building this very dangerous plant.

Please remember that the population cannot survive without clean air and clean water.

This plant will contaminate our clean water and clean air.

Thank you for considering the life and health of all Southern California residents by stopping the building of this plant.

Sincerely,

Birgit Burgess
