Item 9d--Grant for Feasibility Study

As a resident of San Luis Obispo County who has been following the misguided pursuit of an offshore wind energy area off our coastline, I urge you to table Item 9d at this time. The use of the three million dollar grant to conduct a feasibility study for an energy operations and maintenance port is superfluous in light of current pending studies by Mott MacDonald and Clean Energy Terminals. In fact, Mott MacDonald has failed to deliver a study for the same project after receiving one million dollars. The results of this study will be delivered on or before June of 2026. It would seem prudent and responsible to not use additional public money for an additional study.
