Unnecessary Study

Wasting more taxpayer money on studies that are already being done would further undermine the public's trust in the State Government. Especially since this project is not supported by the public anyhow. When clean energy is much cheaper to Californians through rooftop solar and battery storage and the State continues to force this expensive, foreign owned, oppressive economic boondoggle on the public it wreaks of corporate takeover of our clean energy markets and industrializes our coastline and Pacific Ocean. Send a message to PG&E and let them know their business model of regressive, expensive energy is unethical and needs to stop. Reject this wasteful study and start supporting clean energy that's affordable and locally produced and owned. We need courage and leadership, not conformity and business as usual.
