Item 9-D

I am writing to ask you to postpone any more studies or expenses regarding the proposed wind energy project referenced above. There have already been a number of studies on this which have not been released. I suspect that people in support of this project will continue to call for studies until they can find one to produce the results they want. Let's put a stop to this.

Wind energy has been around since the 1970s. It has not proven cost-effective and doesn't work without government subsidies. This particular site is especially unsuitable for so many reasons as have been noted in the past: environmental damage, inadequate road infrastructure, major fire safety issues, and so on.

As a resident of San Luis Obispo county for 45 years, I urge you to postpone action on this item until other study results are released and reviewed.

Thank you very much.
