Offshore Wind Energy

I've lived in SLO for 25 years as a physics professor and energy expert. I find unequivocally that off shore wind will be of great value to our area in terms of providing clean inexpensive energy, clean energy employment, and advance clean energy globally. We need to improve the way we meet our energy needs, and the process will be studied by faculty at Cal Poly to help make the best of the valuable clean energy and study and mitigate any challenges.

Please reach out to me if there's any way I can be of any assistance.

Thank you
Pete Schwartz
