Opposition to Corby Battery Energy Storage System Project “ Docket 24-OPT-05

I am writing to formally object to the proposed Corby Battery Energy Storage System Project (Docket 24-OPT-05). While I support the responsible transition to renewable energy, I have serious concerns regarding the location, safety, environmental impact, and community implications of this particular project.

Battery storage facilities pose significant fire and explosion risks, especially in residential or environmentally sensitive areas.

The potential for soil, air, or groundwater contamination from chemical leaks must be fully assessed. The environmental review should include an independent third-party analysis of potential hazardous material releases and long-term waste management.

These projects often generate constant low-frequency noise and require large industrial infrastructure that disrupts neighborhood character and may reduce property values.

Local residents deserve to be more meaningfully consulted before a project of this scale proceeds. The current notice and outreach process has not sufficiently engaged those most affected.
