## **Concerned citizen**

I have many concerns regarding these battery storage facilities. My professional background gives me a lot of insight to these projects. I have 26 years in industrial construction and chemical plants. I would like to see and review the subgrade plans, what is planned for containment/ secondary containment to guarantee no chemicals have potential to leach into the soil and water table. I would expect to see an MSDS (material safety data sheet) for every possible chemical compound on these sites. What is the emergency response plans? Will these companies have community warning systems in place? If so what? Are local emergency response teams fire departments, hazard trained and equipment to safely respond to all potential issues? I would expect this not to be at tax payers expense. What are the plans in case of a facility fire? How will these companies GUARANTEE not only public safety, but environmental hazards. In my line of work all these questions need to be not only answered but vetted. I would also expect a detailed plan as to what, who and frequencies of site inspections to ensure the safety of these site.
