Hazards

Having a lithium battery storage or disposal of any kind is ridiculous, especially since the surrounding area is dry fields and houses. Especially since the batteries are going to be older so instead of the safer phosphate iron mix it will be mostly the older nickel, manganese and cobalt mix which are extremely dangerous. Unfortunately storage facility fires are not public but I know the odds are not zero and are probably around 24%. The storage facility not only creates a multi million dollar hazard it also lowers the property value of every house in a 25 mile radius. If the city of Vacaville approves this and there is a fire they will be one of the responsible parties.
