Danger to our families and our community

In no way will this benefit the city of Vacaville. The only thing this project would do if approved is put our families and our community in danger. None of this stored energy would even be used for the city of Vacaville let alone Solano county. If this facility were to catch on fire which they have in other locations the fire cannot be put out. The environmental and health risk is insane to even consider in any location in Vacaville. It will be next to hospitals, neighborhoods, schools, much need agricultural land that will also be contaminated. The noise from construction and keeping the batteries cool would be a constant nuisance. We didn't move to Vacaville to have our daughter's life put in jeopardy by a battery storage system. There wouldn't even be jobs being brought to the area by this because once it is up and running it is remotely operated for the most part. The only thing this project brings is down sides.
