## **Failure is Not an Option**

Hydrogen is the Future. Clean air is a nice bonus to the transition to A Hydrogen Energy Economy, but the main reason for Hydrogen as the Energy source for the Future is that it is the best system for storing Wind and Solar Electric production. As long as We have Sun, Wind and water for Electrolysis, We will not run out of energy. Now is the time to make the steps to begin that Energy Transition from Fossil fuels to Renewables Hydrogen. One suggestion is that instead of funding a very few large/expensive Hydrogen Production and dispensing facilities to explore funding smaller and more numerous facilities. If You could build 100 smaller production facilities instead of one large one, then if one went offline, the effects would be minimal. "Don't put all your eggs in one basket"
