Reject Magnolia Gas Expansion Project

This project goes against the stateâ€™s clean energy goals. California has a goal of reaching 100% clean energy by 2045 (SB 100). Increasing gas capacity is the last thing the state should be doing. California also has a requirement, under SB 887 to â€œsubstantially reduce reliance on gas plantsâ€. This proposal directly contradicts this mandate.

If approved, this project would allow the spending of \$23.3 M from the stateâ€™s Strategic Reliability Reserve, which is funded by taxpayers, to increase gas capacity. What a waste of taxpayer money!

Most importantly, the air quality in the surrounding area is among the worst in the state, and such air pollution is associated with many negative health impacts. This is a critical health and environmental justice issue.

Please reject Magnolia gas expansion project.
