Objection to building BESS in Solano County

The dangers of lithium batteries are well known. Furthermore, the plants are expensive, and provide power for only four hours.. These are being built only because of federal subsidies. If there were a real need for additional power, A gas fired peak power plant would be built. It would be smaller, and can run for days if needed. It would be placed out where it is needed, rather than right near to the substation. BESS is nothing more than a chemical waste dump.
