Opposed to proposed site in San Juan Capistrano

I do believe in alternate energy. At a recent town meeting regarding the site, a city of San Juan Capistrano representative stated that the city is not against alternative energy, just not on the proposed site. People have tried to develop that particular site for decades, but the land itself is bad. What did your geology report say? I think Engie's circumventing the appropriate system for development approval speaks volumes as to how they regard our cities and state. It's like a kid asking Dad for permission. When he doesn't give it, the kid goes to Mom. Keep asking until you get the answer you want. I think the state has sold out to Engie.
