**2025_12_18 Holiday Postcard for CEC Commissioners and Staff,
with Influencer Requests RE CA AB1572 (2023)**

Sending the CEC Commissioners/Staffers the following attached pdf, in one traditional snail mail postcard form. This holiday themed postcard or card is being sent to other agencies and people too. The postcard has some CA AB1572 (2023) detail but if CEC persons want to see more detail regarding my Sacramento townhouse, zoned residential, complex's 2025 experience with our board of directors applying CA AB1572 (2023) law. One can hopefully view, communicate and respond easily to the same postcard image under my profile on Linked IN. I am hoping CA AB1572 can be tightened up to make commercial nonfunctional area plantings to be xerophytic and or CA drought tolerant native plant species, with the help of influencers such as yourselves. Happy Holidays!

Additional submitted attachment is included below.

"NON-FUNCTIONAL" TURF OUT, CAMELLIA IN, CITING CA's AB1572

CA[WJZ 2025

December 2025

Dear CA Energy
Commissioners &
Staffers:

Though this note may appear off the energy subject, this does have to do with saving water (and possibly lawn mower fuel), plus somehow, during the time I have listened to the CEC bus. mtg.s, your agency ended up in The Natural Resources building under Secretary Crowfoot's lead. I have occasionally heard commissioner talk about water saving & fuel saving ideas. Please encourage influencers, such as yourselves, to reinforce CA AB 1572 (2023) to require non-functional commercially mowed areas to only replant w/ xerophytic & drought tolerant CA native species. Thank you!
Sincerely,
Claire Zuma
