No Lithium or Thermal Runaway Energy Storage for Vacaville California

To Whom It May Concern,

Vacaville has put a ban into place for any lithium battery energy storage and any capable of causing thermal runaway or fires. Our citizens have been made aware that there is an application coming across your desks for consideration on Kilkenny Rd in Vacaville. This location is dangerous and unwanted. The location is extremely close to prime agricultural land and homes. It can cause a disturbance to traffic on I-80 which would shut down trucking, commuters and blocking our evacuation route. Please uphold the City's regulations that have been out into place including a ban on lithium battery storage. As a community and local government we are not against battery storage, however we do not want technology that is capable of thermal runaway or an excessive amount of toxic chemical and material waste. Our ground water is detrimental to farming and agriculture in this area feeds our community and also our country. The Firefighters Union has submitted a letter contesting such battery storage. Please hear the people and uphold what our voices have already agreed upon. Thank you for your time and consideration.
