## **100% Clean Energy**

Thank you for the important work that you are doing to move California to 100% clean energy. As a consumer, it is extremely important to me that when I plug in my Volt, the electricity is being generated by clean resources. Let's keep our eye on that prize. This means that all gas power plants must be retired and we must not get distracted by false solutions such as carbon capture and sequestration and blending hydrogen with gas, neither of which puts on a path to 100% clean energy. Instead, we must invest in distributed energy resources such as rooftop solar, battery storage, demand response, and energy efficiency as well as large-scale solar, wind and geothermal. Lastly, I would like to see more transparency especially around the issue of phasing out gas plants. What progress is being made? Are the gas plants running for fewer hours? Are they burning less gas? How many megawatts are being generated by burning gas? Are there goals and timelines for reducing our reliance on gas power plants? Where can I see that data?
