## **Power and water concerns**

Indian Wells Valley is already heavily water taxed due to a county official allowing 1000+ acres of almond orchards to be put in place. Is this data center going to be waterless in it's cooling syatem? If not, this project needs to be moved elsewhere as the orchards have already forced residents to pay for wells to be drilled significantly deeper. Is the datacenter going to be forced to pay for buying power from other power providers? Or is that going to be passed on to the residents? The proposed power consumption is between 68 and 73% of the output of local reliable power generation. This will incur significant increases in power transportation costs for the area.
