Opposition to the RB Inyokern Data Center

I am submitting for the record my absolute dissent to the installation of the RB Inyokern Data Center. in summary, the reasons are:

- Noise pollution is excess of allowable levels in or near residential areas of Kern County. I suffer from hearing loss and tinnitus from military service and this installation will be debilitating to the legal and peaceful enjoyment of my property.
- Air Pollution in the form of diesel exhaust and particulates which exacerbate cardiovascular diseases, asthma and respiratory illnesses.
- Increases in utility bills for the surrounding residents to offset the high energy use of the facility where it is proposed to be built. This is happening all over the entire country and it will happen here where we already pay a high premium for electricity.
- Light pollution which will create a nuisance and transform our beautiful, dark desert skies into an artificial light show 24/7.
- Excessive water usage in an area that is already considered to be critically over-drafted by state, county and local standards.
