## **Opposition to Inyokern Data Center**

Putting a data center, which uses a lot of cooling water under the best of circumstances, in the desert is extremely irresponsible. In addition, the method of providing back up power generation by diesel generators is archaic and will drastically increase pollution. Finally, the power use will put untoward strain on an already strained power grid. Instead of putting in data centers that waste energy and resources you should be putting in desalination and solar power plants to maximize the resources we have.
