Critical Water Overdraft in a Small Community

Our small community has already been exceeding the allocated water to ensure we are not cause irreparable harm to our area. We have in recent years begun purchasing water from the LA water lines to offset the current needs of our homes and businesses. Continuing to pull from these resources would have a huge negative impact on the residents and wildlife in the area.

A sustainable water consumption plan must be offered if this is to move forward to avoid further burden on our community.
