Not a smart move

I am for bringing new business and job opportunities for our town, but this is not a smart economic choice for the people, families and businesses in Inyokern and Ridgecrest. They say it will increase jobs, but that would only be for construction, the job opportunities are for a specific group of people that already are employed by the military base. It will tax our already short supply of ground water and electricity. If you do the research from other Data Centers built in other states you will see what they promise is not true. Where does the waste water go after cooling the engines ? Back into our ground water? So no one will be able to drink, shower, or have a swimming pool because the water will be contaminated.

Please bring new things for families to do in town, mini golf, fun centers, batting cages. Not something only politicians will profit from. Let's grow Inyokern and Ridgecrest the right way.
