## **Data Center**

I am opposed to a data center to be built in my community. My question is, why? Plus, my concerns are for environmental first air quality in my community, which will change due to the fact that a data center dumps a lot of humidity into the surrounding area. The second concern I have is that the wastewater being dumped back into the ground would cause an environmental and ecosystem collapse in my community. My third concern is that the proposed aqueduct cannot sustain the draw and kill off the fish that live in a lake/pond and the ecosystem the aqueduct supports. Our community is well documented for aqueduct/aquifer shortages that most definitely cannot ever support a data center of this scale without a huge negative effect on people and the environment in my community.
