No

Nope. It will use more water. Where will that leave us on a well when they drain passed where our well is at? What about the well being of our water table? What is being done about noise and vibration? What is being tested yearly or more frequently in any kind of contamination. Traffic, sound, hazmat, biologically related, etc? What studies are being done socioeconomically and with traffic and transportation? What is being done about the electricity rates? The usage costs will be passed on to the rest of us to make up for subsidies. What subsidies are they being given? What safety measure and prevention measures are being put in place for electrical hazard mitigation, environmental mitigation, soil and water disruption mitigation, sound mitigation? Even sounds we can't hear but are constant and still effect us and our families, pets, livestock, and property? What land use rights are they being given?
