26-SPPE-01 RB Inyokern Data Center (RBIDC)

I respectfully request a full environmental review with specific attention to grid stability and distortions, rapid demand surges and disconnections, and load shedding during times of stress and especially during extreme hot weather. Including specifics on what loads are shed first, how wide the impacted area will be, expected duration of power outages during extreme heat events. I also request a full environmental review on potential impacts if batteries are included at the facility and a fire were to occur at the facility, how would this impact the substation and the surrounding community. I have also heard that this is phase 1 of a multi phase project. What would the impacts be if this were double, triple, or even larger?
