Against data center

This project was fast tracked without environmental oversight or the knowledge of city officials and residents of Inyokern and Ridgecrest. Our concerns include the impact to quality of life for residents of the Indian Wells Valley. From our reading online, data centers require a major overhaul of IT infrastructure and mechanical equipment within 3 to 5 years and the lifetime of a data center might only be 10 to 15 years. Why approve a project that uses excessive water and electricity when experts can't even agree on the availability of water in our valley. Add this to the possibility of an empty building scarring the landscape permanently after the datacenter is no longer of use. What about environmental impact, noise and light pollution, and air quality! Data centers haven't been researched enough for long term affect to environment and people, and animals. Our desert is not a waste land. Definitely against the building of a data center in Inyokern!
