Not enough pros, too many cons

The proposed data center is being built in a location with limited resources. It's hot here, we cannot afford the idea of power outages in the summer. We are currently seeing Tahoe lose power because of the data center. We can't do that. We have little water and try to conserve, data centers use too much water. We do not want this. It will impact our air quality. It will only provide temporary jobs and then continue to put a strain on the area.
