Docket Number: 26-SPPE-01

One of the worst things that could happen

Bringing a data center to this desert would destroy all the progress this area has made. Not to mention it gets hot enough out here without bring a center that would cause the temperatures to rise anywhere from 3.6°f to 16.4°f. This area can not afford to cause that kind of damage. Not only would it effect the temperature and progress that has been made with the water systems, it would also cause families that live here to struggle even more financially. Water cost would also rise. You want to do something to better the communities build more public gardens more learning centers that focus on improving the environment not destroying it. This is California right? Aren't we supposed to be about protecting the environment not destroying it? AI is very cool and all but it is also taking away human intelligence. Our brains are the only super computers that needs to be supported. There are far to many things that would be effected by this build for it to be the right thing. It's the wrong thing and people need to stop lining their pockets with money while destroying the only world we have to live on.
