Against Any Data Centers

Keep this data center out of our community.

Not only do data centers consume the water that we hold scarce in the desert, but they pollute the environment and our night skies. We live in the desert. Water is already expensive for us and hard to come by. A data center will only increase the demand and therefore the price to valley residents. The same is true for electricity. There is no benefit to us, it's just rich folks trying to pass the cost of their data centers on to us.
